**PLAINTIFF HEADWATER RESEARCH LLC’S DISCLOSURE OF
ASSERTED CLAIMS AND INFRINGEMENT CONTENTIONS**

Pursuant to P.R. 3-1 and P.R. 3-2, patent owner Headwater Research LLC (“Headwater”) hereby provides its disclosure of asserted claims and infringement contentions and its accompanying document production. This disclosure is based on the information available to Headwater as of the date of this disclosure, before Headwater has received any discovery on the design or operation of the defendants’ products. Headwater reserves the right to amend this disclosure to the full extent permitted under the court’s rules and orders.

P.R. 3-1: DISCLOSURE OF ASSERTED CLAIMS AND INFRINGEMENT
CONTENTIONS

P.R. 3-1(A): ASSERTED CLAIMS

Headwater asserts that defendants T-Mobile US, Inc., T-Mobile USA, Inc., and Sprint Corp. (collectively, “T-Mobile”) infringe one or more of the following claims, directly, by inducement, by contributory infringement:

<i>U.S. Patent No.</i>	<i>Asserted Claims</i>
8,589,541	1-174
8,924,543	1-13, 15-16, 21-23, 28, 30-33, 35-47, 57-66, 68-72, 80, 85-93, 96, 98-99, 112-113, 120-121
9,198,042	1-9, 12-14, 16-18
9,215,613	1-24

Collectively, these four patents are referred to herein as the Asserted Patents, and these claims as the Asserted Claims.

P.R. 3-1(B): ACCUSED INSTRUMENTALITIES OF WHICH HEADWATER IS
AWARE

In this section, Headwater provides lists of accused products that Headwater is aware of infringing based upon information presently available to it and its investigation to date. Headwater’s infringement claims are not limited to these listed products and specifically extend to all products and apparatuses of T-Mobile similar to the listed products that include the claimed elements. Unless otherwise stated, Headwater’s infringement assertions apply to all variations, versions, editions, and applications of each of the listed products.

U.S. PATENT NO. 8,589,541

Headwater accuses the following smartphones, basic phones, tablets, laptops, and hotspot devices sold (including those sold in bundles with data plans) or used by T-Mobile for use with T-Mobile's wireless network services of infringing each of the Asserted Claims of the '541 patent:

Servers, hardware, software, and services leased, owned, supported, and/or operated by T-Mobile comprising T-Mobile's wireless network services functionality.

Phones, tablets, wearables, and devices used, sold, offered for sale, or imported within six years of the filing of the date of the lawsuit comprising Apple software (e.g., iOS, WatchOS, etc.) including but not limited to the following: iPad Air, iPad Mini 2, iPhone 5C, iPhone 5S, iPad Air 2, iPad mini 3, iPhone 6, iPhone 6 Plus, iPad mini 4, iPad Pro, 12.9 in., iPhone 6S, iPhone 6S Plus, iPad Pro, 9.7 in, iPhone 7, iPhone 7 Plus, iPhone SE (1st Gen), iPad Pro, 10.5 in., iPad Pro, 12.9 in. (2nd Gen), Watch Series 3, iPhone 8, iPhone 8 Plus, iPhone X, iPad (6th Gen), Watch Series 4, iPad Pro, 11 in. (1st Gen), iPad Pro, 12.9 in. (3rd Gen), iPhone XR, iPhone XS, iPhone XS Max, iPad (7th Gen), iPad Air (3rd Gen), iPad Mini (5th Gen), iPhone 11, iPhone 11 Pro, iPhone 11 Pro Max, Watch Series 5, iPad (8th Gen), iPad Air (4th Gen), iPad Pro, 11 in. (2nd Gen), Watch Series 6, Watch SE, iPad Pro, 12.9 in. (4th Gen), iPhone 12, iPhone 12 Mini, iPhone 12 Pro, iPhone 12 Pro Max, iPhone SE (2nd Gen), iPad (9th Gen), iPad Mini (6th Gen), iPad Pro, 11 in. (3rd Gen), iPad Pro, 12.9 in. (5th Gen), iPhone 13, iPhone 13 Mini, iPhone 13 Pro, iPhone 13 Pro Max, Watch Series 7, iPad (10th Gen), iPad Air (5th Gen), Watch Series 8, Watch SE (2nd Gen), Watch Series 9, iPad Pro (6th Gen), iPhone 14, iPhone 14 Plus, Watch Ultra, Watch Ultra 2, iPhone 14 Pro, iPhone 14 Pro Max, iPhone SE (3rd Gen), iPhone 15, iPhone 15 Pro, iPhone 15 Plus, and iPhone 15 Pro Max.

Phones, tablets, wearables, and devices used, sold, offered for sale, or imported within six years of the filing of the date of the lawsuit comprising Android software (e.g., Android Operating System Platform) including but not limited to the following: Galaxy A03s, Galaxy A10e, Galaxy A13, Galaxy A13 5G, Galaxy A14 5G, Galaxy A20, Galaxy Core Prime, Galaxy J3 Eclipse, Galaxy Note 10+, Galaxy Note 10+ 5G, Galaxy Note 20 5G, Galaxy Note 5, Galaxy Note 6, Galaxy Note 7, Galaxy Note 8, Galaxy Note 9, Galaxy S10, Galaxy S10 5G, Galaxy S10+, Galaxy S10e, Galaxy S20 FE 5G, Galaxy S20 Ultra 5G, Galaxy S20+ 5G, Galaxy S21 5G, Galaxy S21 FE 5G, Galaxy S21 Ultra 5G, Galaxy S21+ 5G, Galaxy S22, Galaxy S22 Ultra, Galaxy S22+, Galaxy S22+, Galaxy S23, Galaxy S23 Ultra, Galaxy S23+, Galaxy S23 FE, Galaxy S5, Galaxy S6, Galaxy S6, Galaxy S6 edge, Galaxy S6 edge +, Galaxy S7, Galaxy S8, Galaxy S8+, Galaxy S9, Galaxy S9+, Galaxy Z Flip 3 5G, Galaxy Z Fold 3 5G, Galaxy Z Fold 4, Galaxy Z Fold 5, Galaxy Z Flip 4, Galaxy Z Flip 5, Note 10+ 5G, Galaxy Tab 4 (8.0), Galaxy Tab E, Galaxy Tab S, Galaxy Tab S2, Galaxy Tab S6, Galaxy Tab S7+ 5G, Galaxy Tab A, Galaxy Tab A 8.0, Galaxy Tab A 8.4, Galaxy Note 20 Ultra 5G, Galaxy A02s, Galaxy A12, Galaxy A01, Galaxy A21, Galaxy A51, Galaxy S7 edge, Galaxy Note 10, Galaxy S20 5G, Gear S2, On5, Galaxy J7 Star, Galaxy J3 Star, Pixel 3, Pixel 3 XL, Pixel 3a, Pixel 3a XL, pixel 4, Pixel 4 XL, Pixel 5, Pixel 6, Pixel 6 Pro, Pixel 6a, Pixel 7 Pro, Pixel 7, Pixel XL, OnePlus 6T, HTC 10, One M9, Aristo 2 Plus, G Pad F 8.0, G Pad 10.1, G Pad x8.3, G4, G5, G6, G7, G7 ThinQ, G8, G8 ThinQ, K10, K20 V, K20 V, K30,

K40, K7, Stylo 4, Stylo 5, V10, V20, V30, V40 ThinQ, V50 ThinQ 5G, V60 ThinQ 5G, Velvet 5G, Wing 5G, Edge 2022, moto e play (5th Gen), moto e plus (5th Gen), Moto g pure, Moto g stylus 5G (2021), Moto g stylus 5G (2022), moto g6, moto g7 power, REVVL 2, REVVL 2 Plus, Avid Plus, Obsidian, 7 Pro, REVVL 5G, V60 ThinQ 5G Dual Screen, 7T Pro 5G McLaren, Aristo 4+, moto e 6th gen, Nord N200 5G, REVVL V+ 5G, razr 5G, 9 5G, Nord N300 5G, 10T 5G, REVVL 6 PRO 5G, Stylus 5G, 10 Pro 5G, Voix, Nord N20 5G, 30 XE 5G, G400 5G, one 5G ace, 8 5G, REVVLRY, Stylo 6, K51, REVVL 4, X100 5G, moto g 5G (2022), REVVL 6 5G, Voix, Nexus 9, Onetouch Pixi 7, Onetouch Pop 7 LTE, 3T 8-inch, G Pad 5 10.1 FHD, Joy Tab 2, Tab 8 LE, Tab 10 5G, 9 Pro 5G, Nord N10 5G, REVVL 4+, Nord N100, 8T+ 5G, Pixel Watch, V30+

The products in the preceding list, including all variations, editions, and applications of the foregoing, and all products and apparatuses of T-Mobile similar to the foregoing that include the claimed elements are the '541 Accused Instrumentalities.

U.S. PATENT NO. 8,924,543

Headwater accuses the following smartphones, basic phones, tablets, laptops, and hotspot devices sold (including those sold in bundles with data plans) or used by T-Mobile for use with T-Mobile's wireless network services of infringing each of the Asserted Claims of the '543 patent:

Servers, hardware, software, and services leased, owned, supported, and/or operated by T-Mobile comprising T-Mobile's wireless network services functionality.

Phones, tablets, wearables, and devices used, sold, offered for sale, or imported within six years of the filing of the date of the lawsuit comprising Apple software (e.g., iOS, WatchOS, etc.) including but not limited to the following: iPad Air, iPad Mini 2, iPhone 5C, iPhone 5S, iPad Air 2, iPad mini 3, iPhone 6, iPhone 6 Plus, iPad mini 4, iPad Pro, 12.9 in., iPhone 6S, iPhone 6S Plus, iPad Pro, 9.7 in, iPhone 7, iPhone 7 Plus, iPhone SE (1st Gen), iPad Pro, 10.5 in., iPad Pro, 12.9 in. (2nd Gen), Watch Series 3, iPhone 8, iPhone 8 Plus, iPhone X, iPad (6th Gen), Watch Series 4, iPad Pro, 11 in. (1st Gen), iPad Pro, 12.9 in. (3rd Gen), iPhone XR, iPhone XS, iPhone XS Max, iPad (7th Gen), iPad Air (3rd Gen), iPad Mini (5th Gen), iPhone 11, iPhone 11 Pro, iPhone 11 Pro Max, Watch Series 5, iPad (8th Gen), iPad Air (4th Gen), iPad Pro, 11 in. (2nd Gen), Watch Series 6, Watch SE, iPad Pro, 12.9 in. (4th Gen), iPhone 12, iPhone 12 Mini, iPhone 12 Pro, iPhone 12 Pro Max, iPhone SE (2nd Gen), iPad (9th Gen), iPad Mini (6th Gen), iPad Pro, 11 in. (3rd Gen), iPad Pro, 12.9 in. (5th Gen), iPhone 13, iPhone 13 Mini, iPhone 13 Pro, iPhone 13 Pro Max, Watch Series 7, iPad (10th Gen), iPad Air (5th Gen), Watch Series 8, Watch SE (2nd Gen), Watch Series 9, iPad Pro (6th Gen), iPhone 14, iPhone 14 Plus, Watch Ultra, Watch Ultra 2, iPhone 14 Pro, iPhone 14 Pro Max, iPhone SE (3rd Gen), iPhone 15, iPhone 15 Pro, iPhone 15 Plus, and iPhone 15 Pro Max.

Phones, tablets, wearables, and devices used, sold, offered for sale, or imported within six years of the filing of the date of the lawsuit comprising Android software (e.g., Android Operating

System Platform) including but not limited to the following: Galaxy A03s, Galaxy A10e, Galaxy A13, Galaxy A13 5G, Galaxy A14 5G, Galaxy A20, Galaxy Core Prime, Galaxy J3 Eclipse, Galaxy Note 10+, Galaxy Note 10+ 5G, Galaxy Note 20 5G, Galaxy Note 5, Galaxy Note 6, Galaxy Note 7, Galaxy Note 8, Galaxy Note 9, Galaxy S10, Galaxy S10 5G, Galaxy S10+, Galaxy S10e, Galaxy S20 FE 5G, Galaxy S20 Ultra 5G, Galaxy S20+ 5G, Galaxy S21 5G, Galaxy S21 FE 5G, Galaxy S21 Ultra 5G, Galaxy S21+ 5G, Galaxy S22, Galaxy S22 Ultra, Galaxy S22+, Galaxy S23, Galaxy S23 Ultra, Galaxy S23+, Galaxy S23 FE, Galaxy S5, Galaxy S6, Galaxy S6, Galaxy S6 edge, Galaxy S6 edge +, Galaxy S7, Galaxy S8, Galaxy S8+, Galaxy S9, Galaxy S9+, Galaxy Z Flip 3 5G, Galaxy Z Fold 3 5G, Galaxy Z Fold 4, Galaxy Z Fold 5, Galaxy Z Flip 4, Galaxy Z Flip 5, Note 10+ 5G, Galaxy Tab 4 (8.0), Galaxy Tab E, Galaxy Tab S, Galaxy Tab S2, Galaxy Tab S6, Galaxy Tab S7+ 5G, Galaxy Tab A, Galaxy Tab A 8.0, Galaxy Tab A 8.4, Galaxy Note 20 Ultra 5G, Galaxy A02s, Galaxy A12, Galaxy A01, Galaxy A21, Galaxy A51, Galaxy S7 edge, Galaxy Note 10, Galaxy S20 5G, Gear S2, On5, Galaxy J7 Star, Galaxy J3 Star, Pixel 3, Pixel 3 XL, Pixel 3a, Pixel 3a XL, pixel 4, Pixel 4 XL, Pixel 5, Pixel 6, Pixel 6 Pro, Pixel 6a, Pixel 7 Pro, Pixel 7, Pixel XL, OnePlus 6T, HTC 10, One M9, Aristo 2 Plus, G Pad F 8.0, G Pad 10.1, G Pad x8.3, G4, G5, G6, G7, G7 ThinQ, G8, G8 ThinQ, K10, K20 V, K20 V, K30, K40, K7, Stylo 4, Stylo 5, V10, V20, V30, V40 ThinQ, V50 ThinQ 5G, V60 ThinQ 5G, Velvet 5G, Wing 5G, Edge 2022, moto e play (5th Gen), moto e plus (5th Gen), Moto g pure, Moto g stylus 5G (2021), Moto g stylus 5G (2022), moto g6, moto g7 power, REVVL 2, REVVL 2 Plus, Avid Plus, Obsidian, 7 Pro, REVVL 5G, V60 ThinQ 5G Dual Screen, 7T Pro 5G McLaren, Aristo 4+, moto e 6th gen, Nord N200 5G, REVVL V+ 5G, razr 5G, 9 5G, Nord N300 5G, 10T 5G, REVVL 6 PRO 5G, Stylus 5G, 10 Pro 5G, Voix, Nord N20 5G, 30 XE 5G, G400 5G, one 5G ace, 8 5G, REVVLRY, Stylo 6, K51, REVVL 4, X100 5G, moto g 5G (2022), REVVL 6 5G, Voix, Nexus 9, Onetouch Pixi 7, Onetouch Pop 7 LTE, 3T 8-inch, G Pad 5 10.1 FHD, Joy Tab 2, Tab 8 LE, Tab 10 5G, 9 Pro 5G, Nord N10 5G, REVVL 4+, Nord N100, 8T+ 5G, Pixel Watch, V30+

The products in the preceding list, including all variations, editions, and applications of the foregoing, and all products and apparatuses of T-Mobile similar to the foregoing that include the claimed elements are the '543 Accused Instrumentalities.

U.S. PATENT NO. 9,198,042

Headwater accuses the following smartphones, basic phones, tablets, laptops, and hotspot devices sold (including those sold in bundles with data plans) or used by T-Mobile for use with T-Mobile's wireless network services of infringing each of the Asserted Claims of the '042 patent:

Servers, hardware, software, and services leased, owned, supported, and/or operated by T-Mobile comprising T-Mobile's wireless network services functionality.

Phones, tablets, wearables, and devices used, sold, offered for sale, or imported within six years of the filing of the date of the lawsuit comprising Apple software (e.g., iOS, WatchOS, etc.) including but not limited to the following: iPad Air, iPad Mini 2, iPhone 5C, iPhone 5S, iPad Air

2, iPad mini 3, iPhone 6, iPhone 6 Plus, iPad mini 4, iPad Pro, 12.9 in., iPhone 6S, iPhone 6S Plus, iPad Pro, 9.7 in, iPhone 7, iPhone 7 Plus, iPhone SE (1st Gen), iPad Pro, 10.5 in., iPad Pro, 12.9 in. (2nd Gen), Watch Series 3, iPhone 8, iPhone 8 Plus, iPhone X, iPad (6th Gen), Watch Series 4, iPad Pro, 11 in. (1st Gen), iPad Pro, 12.9 in. (3rd Gen), iPhone XR, iPhone XS, iPhone XS Max, iPad (7th Gen), iPad Air (3rd Gen), iPad Mini (5th Gen), iPhone 11, iPhone 11 Pro, iPhone 11 Pro Max, Watch Series 5, iPad (8th Gen), iPad Air (4th Gen), iPad Pro, 11 in. (2nd Gen), Watch Series 6, Watch SE, iPad Pro, 12.9 in. (4th Gen), iPhone 12, iPhone 12 Mini, iPhone 12 Pro, iPhone 12 Pro Max, iPhone SE (2nd Gen), iPad (9th Gen), iPad Mini (6th Gen), iPad Pro, 11 in. (3rd Gen), iPad Pro, 12.9 in. (5th Gen), iPhone 13, iPhone 13 Mini, iPhone 13 Pro, iPhone 13 Pro Max, Watch Series 7, iPad (10th Gen), iPad Air (5th Gen), Watch Series 8, Watch SE (2nd Gen), Watch Series 9, iPad Pro (6th Gen), iPhone 14, iPhone 14 Plus, Watch Ultra, Watch Ultra 2, iPhone 14 Pro, iPhone 14 Pro Max, iPhone SE (3rd Gen), iPhone 15, iPhone 15 Pro, iPhone 15 Plus, and iPhone 15 Pro Max.

Phones, tablets, wearables, and devices used, sold, offered for sale, or imported within six years of the filing of the date of the lawsuit comprising Android software (e.g., Android Operating System Platform) including but not limited to the following: Galaxy A03s, Galaxy A10e, Galaxy A13, Galaxy A13 5G, Galaxy A14 5G, Galaxy A20, Galaxy Core Prime, Galaxy J3 Eclipse, Galaxy Note 10+, Galaxy Note 10+ 5G, Galaxy Note 20 5G, Galaxy Note 5, Galaxy Note 6, Galaxy Note 7, Galaxy Note 8, Galaxy Note 9, Galaxy S10, Galaxy S10 5G, Galaxy S10+, Galaxy S10e, Galaxy S20 FE 5G, Galaxy S20 Ultra 5G, Galaxy S20+ 5G, Galaxy S21 5G, Galaxy S21 FE 5G, Galaxy S21 Ultra 5G, Galaxy S21+ 5G, Galaxy S22, Galaxy S22 Ultra, Galaxy S22+, Galaxy S22+, Galaxy S23, Galaxy S23 Ultra, Galaxy S23+, Galaxy S23 FE, Galaxy S5, Galaxy S6, Galaxy S6, Galaxy S6 edge, Galaxy S6 edge +, Galaxy S7, Galaxy S8, Galaxy S8+, Galaxy S9, Galaxy S9+, Galaxy Z Flip 3 5G, Galaxy Z Fold 3 5G, Galaxy Z Fold 4, Galaxy Z Fold 5, Galaxy Z Flip 4, Galaxy Z Flip 5, Note 10+ 5G, Galaxy Tab 4 (8.0, Galaxy Tab E, Galaxy Tab S, Galaxy Tab S2, Galaxy Tab S6, Galaxy Tab S7+ 5G, Galaxy Tab A, Galaxy Tab A 8.0, Galaxy Tab A 8.4, Galaxy Note 20 Ultra 5G, Galaxy A02s, Galaxy A12, Galaxy A01, Galaxy A21, Galaxy A51, Galaxy S7 edge, Galaxy Note 10, Galaxy S20 5G, Gear S2, On5, Galaxy J7 Star, Galaxy J3 Star, Pixel 3, Pixel 3 XL, Pixel 3a, Pixel 3a XL, pixel 4, Pixel 4 XL, Pixel 5, Pixel 6, Pixel 6 Pro, Pixel 6a, Pixel 7 Pro, Pixel 7, Pixel XL, OnePlus 6T, HTC 10, One M9, Aristo 2 Plus, G Pad F 8.0, G Pad 10.1, G Pad x8.3, G4, G5, G6, G7, G7 ThinQ, G8, G8 ThinQ, K10, K20 V, K20 V, K30, K40, K7, Stylo 4, Stylo 5, V10, V20, V30, V40 ThinQ, V50 ThinQ 5G, V60 ThinQ 5G, Velvet 5G, Wing 5G, Edge 2022, moto e play (5th Gen), moto e plus (5th Gen), Moto g pure, Moto g stylus 5G (2021), Moto g stylus 5G (2022), moto g6, moto g7 power, REVVL 2, REVVL 2 Plus, Avid Plus, Obsidian, 7 Pro, REVVL 5G, V60 ThinQ 5G Dual Screen, 7T Pro 5G McLaren, Aristo 4+, moto e 6th gen, Nord N200 5G, REVVL V+ 5G, razr 5G, 9 5G, Nord N300 5G, 10T 5G, REVVL 6 PRO 5G, Stylus 5G, 10 Pro 5G, Voix, Nord N20 5G, 30 XE 5G, G400 5G, one 5G ace, 8 5G, REVVLRY, Stylo 6, K51, REVVL 4, X100 5G, moto g 5G (2022), REVVL 6 5G, Voix, Nexus 9, Onetouch Pixi 7, Onetouch Pop 7 LTE, 3T 8-inch, G Pad 5 10.1 FHD, Joy Tab 2, Tab 8 LE, Tab 10 5G, 9 Pro 5G, Nord N10 5G, REVVL 4+, Nord N100, 8T+ 5G, Pixel Watch, V30+.

The products in the preceding list, including all variations, editions, and applications of the foregoing, and all products and apparatuses of T-Mobile similar to the foregoing that include the claimed elements are the '042 Accused Instrumentalities.

U.S. PATENT NO. 9,215,613

Headwater accuses the following smartphones, basic phones, tablets, laptops, and hotspot devices sold (including those sold in bundles with data plans) or used by T-Mobile for use with T-Mobile's wireless network services of infringing each of the Asserted Claims of the '613 patent:

Servers, hardware, software, and services leased, owned, supported, and/or operated by T-Mobile comprising T-Mobile's wireless network services functionality.

Phones, tablets, wearables, and devices used, sold, offered for sale, or imported within six years of the filing of the date of the lawsuit comprising Apple software (e.g., iOS, WatchOS, etc.) including but not limited to the following: iPad Air, iPad Mini 2, iPhone 5C, iPhone 5S, iPad Air 2, iPad mini 3, iPhone 6, iPhone 6 Plus, iPad mini 4, iPad Pro, 12.9 in., iPhone 6S, iPhone 6S Plus, iPad Pro, 9.7 in, iPhone 7, iPhone 7 Plus, iPhone SE (1st Gen), iPad Pro, 10.5 in., iPad Pro, 12.9 in. (2nd Gen), Watch Series 3, iPhone 8, iPhone 8 Plus, iPhone X, iPad (6th Gen), Watch Series 4, iPad Pro, 11 in. (1st Gen), iPad Pro, 12.9 in. (3rd Gen), iPhone XR, iPhone XS, iPhone XS Max, iPad (7th Gen), iPad Air (3rd Gen), iPad Mini (5th Gen), iPhone 11, iPhone 11 Pro, iPhone 11 Pro Max, Watch Series 5, iPad (8th Gen), iPad Air (4th Gen), iPad Pro, 11 in. (2nd Gen), Watch Series 6, Watch SE, iPad Pro, 12.9 in. (4th Gen), iPhone 12, iPhone 12 Mini, iPhone 12 Pro, iPhone 12 Pro Max, iPhone SE (2nd Gen), iPad (9th Gen), iPad Mini (6th Gen), iPad Pro, 11 in. (3rd Gen), iPad Pro, 12.9 in. (5th Gen), iPhone 13, iPhone 13 Mini, iPhone 13 Pro, iPhone 13 Pro Max, Watch Series 7, iPad (10th Gen), iPad Air (5th Gen), Watch Series 8, Watch SE (2nd Gen), Watch Series 9, iPad Pro (6th Gen), iPhone 14, iPhone 14 Plus, Watch Ultra, Watch Ultra 2, iPhone 14 Pro, iPhone 14 Pro Max, iPhone SE (3rd Gen), iPhone 15, iPhone 15 Pro, iPhone 15 Plus, and iPhone 15 Pro Max.

Phones, tablets, wearables, and devices used, sold, offered for sale, or imported within six years of the filing of the date of the lawsuit comprising Android software (e.g., Android Operating System Platform) including but not limited to the following: Galaxy A03s, Galaxy A10e, Galaxy A13, Galaxy A13 5G, Galaxy A14 5G, Galaxy A20, Galaxy Core Prime, Galaxy J3 Eclipse, Galaxy Note 10+, Galaxy Note 10+ 5G, Galaxy Note 20 5G, Galaxy Note 5, Galaxy Note 6, Galaxy Note 7, Galaxy Note 8, Galaxy Note 9, Galaxy S10, Galaxy S10 5G, Galaxy S10+, Galaxy S10e, Galaxy S20 FE 5G, Galaxy S20 Ultra 5G, Galaxy S20+ 5G, Galaxy S21 5G, Galaxy S21 FE 5G, Galaxy S21 Ultra 5G, Galaxy S21+ 5G, Galaxy S22, Galaxy S22 Ultra, Galaxy S22+, Galaxy S22+, Galaxy S23, Galaxy S23 Ultra, Galaxy S23+, Galaxy S23 FE, Galaxy S5, Galaxy S6, Galaxy S6, Galaxy S6 edge, Galaxy S6 edge +, Galaxy S7, Galaxy S8, Galaxy S8+, Galaxy S9, Galaxy S9+, Galaxy Z Flip 3 5G, Galaxy Z Fold 3 5G, Galaxy Z Fold 4, Galaxy Z Fold 5, Galaxy Z Flip 4, Galaxy Z Flip 5, Note 10+ 5G, Galaxy Tab 4 (8.0), Galaxy Tab E, Galaxy Tab S,

Galaxy Tab S2, Galaxy Tab S6, Galaxy Tab S7+ 5G, Galaxy Tab A, Galaxy Tab A 8.0, Galaxy Tab A 8.4, Galaxy Note 20 Ultra 5G, Galaxy A02s, Galaxy A12, Galaxy A01, Galaxy A21, Galaxy A51, Galaxy S7 edge, Galaxy Note 10, Galaxy S20 5G, Gear S2, On5, Galaxy J7 Star, Galaxy J3 Star, Pixel 3, Pixel 3 XL, Pixel 3a, Pixel 3a XL, pixel 4, Pixel 4 XL, Pixel 5, Pixel 6, Pixel 6 Pro, Pixel 6a, Pixel 7 Pro, Pixel 7, Pixel XL, OnePlus 6T, HTC 10, One M9, Aristo 2 Plus, G Pad F 8.0, G Pad 10.1, G Pad x8.3, G4, G5, G6, G7, G7 ThinQ, G8, G8 ThinQ, K10, K20 V, K20 V, K30, K40, K7, Stylo 4, Stylo 5, V10, V20, V30, V40 ThinQ, V50 ThinQ 5G, V60 ThinQ 5G, Velvet 5G, Wing 5G, Edge 2022, moto e play (5th Gen), moto e plus (5th Gen), Moto g pure, Moto g stylus 5G (2021), Moto g stylus 5G (2022), moto g6, moto g7 power, REVVL 2, REVVL 2 Plus, Avid Plus, Obsidian, 7 Pro, REVVL 5G, V60 ThinQ 5G Dual Screen, 7T Pro 5G McLaren, Aristo 4+, moto e 6th gen, Nord N200 5G, REVVL V+ 5G, razr 5G, 9 5G, Nord N300 5G, 10T 5G, REVVL 6 PRO 5G, Stylus 5G, 10 Pro 5G, Voix, Nord N20 5G, 30 XE 5G, G400 5G, one 5G ace, 8 5G, REVVLRY, Stylo 6, K51, REVVL 4, X100 5G, moto g 5G (2022), REVVL 6 5G, Voix, Nexus 9, Onetouch Pixi 7, Onetouch Pop 7 LTE, 3T 8-inch, G Pad 5 10.1 FHD, Joy Tab 2, Tab 8 LE, Tab 10 5G, 9 Pro 5G, Nord N10 5G, REVVL 4+, Nord N100, 8T+ 5G, Pixel Watch, V30+.

The products in the preceding list, including all variations, editions, and applications of the foregoing, and all products and apparatuses of T-Mobile similar to the foregoing that include the claimed elements are the '613 Accused Instrumentalities.

P.R. 3-1(C): CLAIM CHARTS

Headwater's analysis of T-Mobile's products and apparatuses is based upon information that is publicly available and based on Headwater's own investigation prior to any discovery in this action.

While the publicly available information constitutes evidence of the methods and apparatuses used by Headwater in the Accused Instrumentalities, direct evidence of the actual apparatuses and methods are at times not publicly available. Accordingly, these infringement contentions are based on the available public information, analysis, and reasonable inferences drawn from that information.

Headwater reserves the right to amend or supplement these disclosures for any of the following reasons (along with any other reason that may be permitted under the court's rules and orders):

- (1) T-Mobile provides evidence of the apparatuses and methods used in the Accused Instrumentalities;
- (2) The Asserted Claims may include elements that involve features that are implemented by hardware structures and logic and Headwater's current positions on infringement are set forth without the benefit of access to T-Mobile's source code, schematics, drawings, or other proprietary specifications or information, which cannot be obtained through publicly available information, for the Accused Instrumentalities. Therefore, it may be necessary for Headwater to supplement its positions on infringement after a complete production of such proprietary specifications or information by T-Mobile;
- (3) Headwater's position on infringement of specific claims will depend on the claim constructions adopted by the Court. Because said constructions have not yet occurred, Headwater cannot take a final position on the bases for infringement of the Asserted Claims; and
- (4) Headwater's investigation and analysis of T-Mobile's Accused Instrumentalities are based upon information made publicly available by T-Mobile and by Headwater's own investigations. Headwater reserves the right to amend these contentions based upon discovery of non-public information that Headwater anticipates receiving from T-Mobile during discovery.

Attached as Exhibits A through D, and incorporated herein in their entirety, are charts identifying where each element of the Asserted Claims of the '541, '543, '042, and '613 patents are found in the Accused Instrumentalities.

Unless otherwise indicated, the information provided that corresponds to each claim element is considered to indicate that each claim element is found within each of the different variations, versions, editions, and applications of each respective Accused Instrumentalities.

P.R. 3-1(D): LITERAL INFRINGEMENT AND DOCTRINE OF EQUIVALENTS

With respect to the patents at issue, Headwater contends that each element of each Asserted Claim is literally present. To the extent that T-Mobile identifies elements of the Asserted Claims that it contends are not literally present in the Accused Instrumentalities, Headwater contends that such elements are present under the doctrine of equivalents.

P.R. 3-1(E): PRIORITY DATES

<i>U.S. Patent No.</i>	<i>Priority Date</i>
8,589,541	January 28, 2009
8,924,543	January 28, 2009
9,198,042	January 28, 2009
9,215,613	January 28, 2009

P.R. 3-1(F): IDENTIFICATION OF INSTRUMENTALITIES PRACTICING THE CLAIMED INVENTION

The ItsOn software may incorporate or reflect the claims of the Asserted Patents. Headwater reserves the right to supplement this response should further investigation, discovery, or the court's claim construction rulings make such supplementation appropriate.

P.R. 3-2: DOCUMENT PRODUCTION ACCOMPANYING DISCLOSURE

P.R. 3-2(A) DOCUMENTS

Headwater is presently unaware of any documents that evidence any discussion with, disclosure to, or other manner of providing to a third party, or sale of or offer to sell, any of the inventions claimed in the patents in suit prior to their respective application dates.

A diligent search continues for documents, and Headwater reserves the right to supplement this response.

P.R. 3-2(B) DOCUMENTS

Headwater is presently unaware of any documents that evidence the conception, reduction to practice, design, or development of the claimed inventions, which were created on or before the application dates of the patents in suit or priority date identified pursuant to P.R. 3-1(e).

A diligent search continues for documents, and Headwater reserves the right to supplement this response.

P.R. 3-2(C) DOCUMENTS

The file histories for the '541, '543, '042, and '613 patents may be found in Headwater's production.

Exhibit A - U.S. Patent No. 8,589,541 (“’541 Patent”)

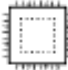

Accused Instrumentalities: smartphones, basic phones, tablets, laptops, and hotspot devices sold (including those sold in bundles with data plans) or used by T-Mobile and all versions and variations thereof (“Accused Instrumentalities”) since the issuance of U.S. Pat. No. 8,589,541 (the “Asserted Patent”).

Claim 1

Claim	Public Documentation
[1a] A non-transitory computer-readable storage medium storing machine-executable instructions that, when executed by one or more processors of a wireless end-user device, cause the one or more processors to:	<p>The Accused Instrumentalities include “A non-transitory computer-readable storage medium storing machine-executable instructions that, when executed by one or more processors of a wireless end-user device, cause the one or more processors to.”</p> <p>For example, T-Mobile sells and uses devices described by T-Mobile’s website below (e.g., devices made by Samsung, Apple, Motorola, Google, Nokia, etc.). These devices constitute a wireless end-user device as described in claim 1. <i>See, e.g.</i> https://www.t-mobile.com/cell-phones</p>

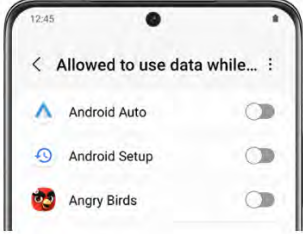

Claim	Public Documentation																																			
	 <p>The screenshot displays the T-Mobile website's 'Phones' section. At the top, navigation links include 'Plans', 'Phones & devices', 'Deals', 'Coverage', and 'Join Us'. A pink banner advertises 'Free 2-day shipping. Applied at checkout or call 844-486-9807'. The main content area features a 'Shop' sidebar with categories like 'Phones', 'Tablets & Devices', 'Smart watches', 'Hotspots & more', and 'Accessories'. Below this is a 'Filters' section with expandable options for 'Deals', 'Brands', 'Operating System', 'Network speed', and 'SIM type'. The central 'Phones' section shows a grid of iPhone models with their respective financing options. A 'Sort by: Featured' dropdown is located at the top right of the phone grid. A vertical pink bar on the left side of the phone grid reads 'Newest'. At the bottom right, a pink button says 'Want to add service?'. The financing details for each phone are as follows:</p> <table border="1"><thead><tr><th>Phone Model</th><th>Rating</th><th>Starting at Monthly</th><th>Today</th><th>Full price</th></tr></thead><tbody><tr><td>iPhone 15 Pro</td><td>4.1 (27)</td><td>\$41.67</td><td>\$0</td><td>\$999.99</td></tr><tr><td>iPhone 15 Pro Max</td><td>3.7 (28)</td><td>\$50.00</td><td>\$0</td><td>\$1,199.99</td></tr><tr><td>iPhone 15</td><td>4.6 (11)</td><td>\$34.59</td><td>\$0</td><td>\$629.99</td></tr><tr><td>iPhone 15 Plus</td><td>4.9 (1)</td><td>\$38.75</td><td>\$0</td><td>\$929.99</td></tr><tr><td>iPhone 13</td><td>4.3 (1)</td><td>\$26.25</td><td>\$0</td><td>\$629.99</td></tr><tr><td>iPhone 14 Pro</td><td>3.8 (42)</td><td>\$37.50</td><td>\$99.99</td><td>\$929.99</td></tr></tbody></table>	Phone Model	Rating	Starting at Monthly	Today	Full price	iPhone 15 Pro	4.1 (27)	\$41.67	\$0	\$999.99	iPhone 15 Pro Max	3.7 (28)	\$50.00	\$0	\$1,199.99	iPhone 15	4.6 (11)	\$34.59	\$0	\$629.99	iPhone 15 Plus	4.9 (1)	\$38.75	\$0	\$929.99	iPhone 13	4.3 (1)	\$26.25	\$0	\$629.99	iPhone 14 Pro	3.8 (42)	\$37.50	\$99.99	\$929.99

Claim	Public Documentation
	<div data-bbox="594 245 1831 860"> <h3>Power saving mode</h3> <p>Note: Using Power saving mode can affect app and device performance. Some tasks and features may take longer to complete or update. Additionally, apps running in the background may not receive updates or send you notifications when Power saving mode is enabled.</p> <p>Before you turn in for the night, change your phone's power mode. This will decrease your phone's performance and save battery life.</p> <ol style="list-style-type: none"> 1. Navigate to and open Settings, and then tap Battery and device care. 2. Tap Battery, and then tap Power saving. 3. Tap the switches next to your desired settings or customizations. 4. Finally, tap the switch at the top of the screen to activate Power saving mode. <p>You will not be able to adjust the settings once the mode is enabled. If you want to change any of the settings, you'll need to temporarily disable Power saving mode.</p>  </div> <p>; https://developer.android.com/training/basics/network-ops/data-saver:</p> <div data-bbox="594 958 1619 1390"> <h3>Optimize network data usage</h3> <p>Over the life of a smartphone, the cost of a cellular data plan can easily exceed the cost of the device itself. On Android 7.0 (API level 24) and higher, users can enable Data Saver on a device-wide basis in order to optimize their device's data usage, and use less data. This ability is especially useful when roaming, near the end of the billing cycle, or for a small prepaid data pack.</p> <p>When a user enables Data Saver in Settings and the device is on a metered network, the system blocks background data usage and signals apps to use less data in the foreground wherever possible. Users can allow specific apps to use background metered data usage even when Data Saver is turned on.</p> <p>Android 7.0 (API level 24) extends the ConnectivityManager API to provide apps with a way to retrieve the user's Data Saver preferences and monitor preference changes. It is considered good practice for apps to check whether the user has enabled Data Saver and make an effort to limit foreground and background data usage.</p> </div>

Claim	Public Documentation
	<div data-bbox="594 245 1577 797"> <h3>Check data saver preferences</h3> <p>On Android 7.0 (API level 24) and higher, apps can use the <code>ConnectivityManager</code> API to determine what data usage restrictions are being applied. The <code>getRestrictBackgroundStatus()</code> method returns one of the following values:</p> <p><code>RESTRICT_BACKGROUND_STATUS_DISABLED</code></p> <p>Data Saver is disabled.</p> <p><code>RESTRICT_BACKGROUND_STATUS_ENABLED</code></p> <p>The user has enabled Data Saver for this app. Apps should make an effort to limit data usage in the foreground and gracefully handle restrictions to background data usage.</p> <p><code>RESTRICT_BACKGROUND_STATUS_WHITELISTED</code></p> <p>The user has enabled Data Saver but the app is allowed to bypass it. Apps should still make an effort to limit foreground and background data usage.</p> <p>Limit data usage whenever the device is connected to a metered network, even if Data Saver is disabled or the app is allowed to bypass it. The following sample code uses <code>ConnectivityManager.isActiveNetworkMetered()</code> and <code>ConnectivityManager.getRestrictBackgroundStatus()</code> to determine how much data the app should use:</p> </div> <p data-bbox="594 889 1593 922">; https://developer.android.com/training/monitoring-device-state/doze-standby:</p> <div data-bbox="594 930 1829 1425"> <h2>Optimize for Doze and App Standby </h2> <p>Starting from Android 6.0 (API level 23), Android introduces two power-saving features that extend battery life for users by managing how apps behave when a device is not connected to a power source. <i>Doze</i> reduces battery consumption by deferring background CPU and network activity for apps when the device is unused for long periods of time. <i>App Standby</i> defers background network activity for apps with which the user has not recently interacted.</p> <p>While the device is in Doze, apps' access to certain battery-intensive resources is deferred until maintenance windows. The specific restrictions are listed in Power Management Restrictions.</p> <p>Doze and App Standby manage the behavior of all apps running on Android 6.0 or higher, regardless whether they are specifically targeting API level 23. To ensure the best experience for users, test your app in Doze and App Standby modes and make any necessary adjustments to your code. The sections below provide details.</p> </div>

Claim	Public Documentation
	<div data-bbox="594 245 1549 870"> <h3>Understanding Doze</h3> <p>If a user leaves a device unplugged and stationary for a period of time, with the screen off, the device enters Doze mode. In Doze mode, the system attempts to conserve battery by restricting apps' access to network and CPU-intensive services. It also prevents apps from accessing the network and defers their jobs, syncs, and standard alarms.</p> <p>Periodically, the system exits Doze for a brief time to let apps complete their deferred activities. During this <i>maintenance window</i>, the system runs all pending syncs, jobs, and alarms, and lets apps access the network.</p>  <p>Figure 1. Doze provides a recurring maintenance window for apps to use the network and handle pending activities.</p> </div> <div data-bbox="594 894 1648 1065"> <p>At the conclusion of each maintenance window, the system again enters Doze, suspending network access and deferring jobs, syncs, and alarms. Over time, the system schedules maintenance windows less and less frequently, helping to reduce battery consumption in cases of longer-term inactivity when the device is not connected to a charger.</p> <p>As soon as the user wakes the device by moving it, turning on the screen, or connecting a charger, the system exits Doze and all apps return to normal activity.</p> </div> <div data-bbox="594 1089 1833 1219"> <p>The Doze restriction on network access is also likely to affect your app, especially if the app relies on real-time messages such as tickles or notifications. If your app requires a persistent connection to the network to receive messages, you should use Firebase Cloud Messaging (FCM) if possible.</p> </div> <p>; https://developer.android.com/topic/performance/appstandby:</p>

App Standby Buckets

Android 9 (API level 28) and higher support **App Standby Buckets**. App Standby Buckets help the system prioritize apps' requests for resources based on how recently and how frequently the apps are used. Based on app usage patterns, each app is placed in one of five priority **buckets**. The system limits the device resources available to each app based on which bucket the app is in.

Priority buckets

The system dynamically assigns each app to a priority bucket, reassigning the apps as needed. The system may rely on a preloaded app that uses machine learning to determine how likely each app is to be used, and assigns apps to the appropriate buckets. If the system app is not present on a device, the system defaults to sorting apps based on how recently they were used. More active apps are assigned to buckets that give the apps higher priority, making more system resources available to the app. In particular, the bucket determines how frequently the app's jobs run, and how often the app can trigger alarms. These restrictions apply only while the device is on battery power; the system does not impose these restrictions on apps while the device is charging.

★ **Note:** Every manufacturer can set their own criteria for how non-active apps are assigned to buckets. You should not try to influence which bucket your app is assigned to. Instead, focus on making sure your app behaves well in whatever bucket it might be in. Your app can find out what bucket it's currently in by calling `UsageStatsManager.getAppStandbyBucket()`.

The buckets are:

1. **Active:** App is currently being used or was very recently used.
2. **Working set:** App is in regular use.
3. **Frequent:** App is often used, but not every day.
4. **Rare:** App is not frequently used.
5. **Restricted:** App consumes a great deal of system resources, or may exhibit undesirable behavior.

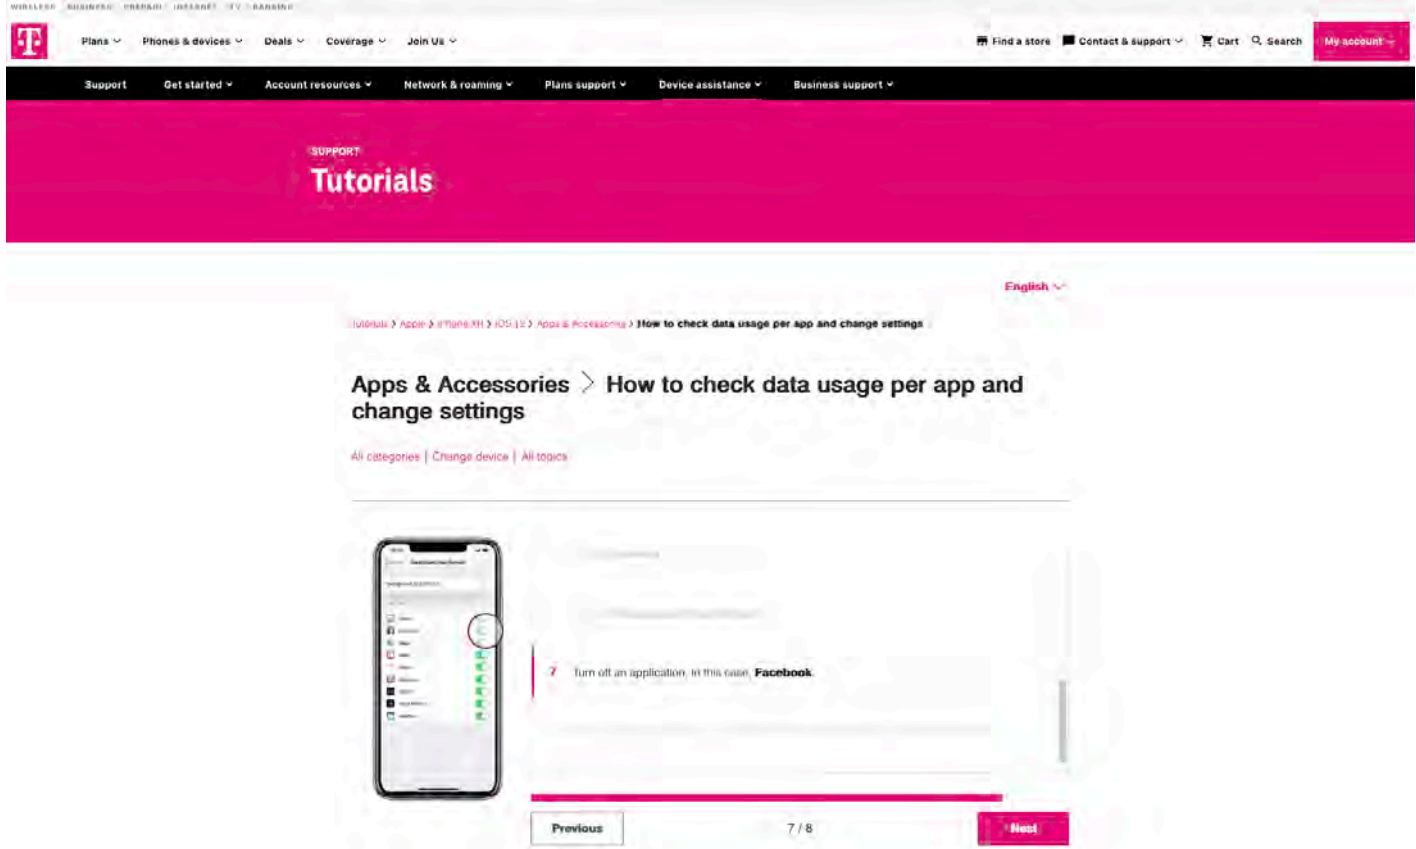

In addition, there's a special **never** bucket for apps that have been installed but have never been run. The system imposes severe restrictions on these apps.

Use Low Power Mode to save battery life on your iPhone or iPad

Low Power Mode reduces the amount of power that your iPhone or iPad uses when the battery gets low.

To turn Low Power Mode on or off, go to Settings > Battery. You can also turn Low Power Mode on and off from Control Center. Go to Settings > Control Center > Customize Controls, then select Low Power Mode to add it to Control Center.

When Low Power Mode is on, your iPhone or iPad will last longer before you need to charge it, but some features might take longer to update or complete. Also, some tasks might not work until you turn off Low Power Mode, or until you charge your iPhone or iPad to 80% or higher.

Low Power Mode reduces or affects these features:

- 5G (except for video streaming) on iPhone 12 and iPhone 13 models¹
- Auto-Lock (defaults to 30 seconds)
- Display brightness
- Display refresh rate (limited up to 60 Hz) on iPhone and iPad models with ProMotion display²
- Some visual effects
- iCloud Photos (temporarily paused)
- Automatic downloads
- Email fetch
- Background app refresh

When Low Power Mode is on, the battery in the status bar will be yellow. You'll see a yellow battery icon  and the battery percentage. After you charge your iPhone or iPad to 80% or higher, Low Power Mode automatically turns off.

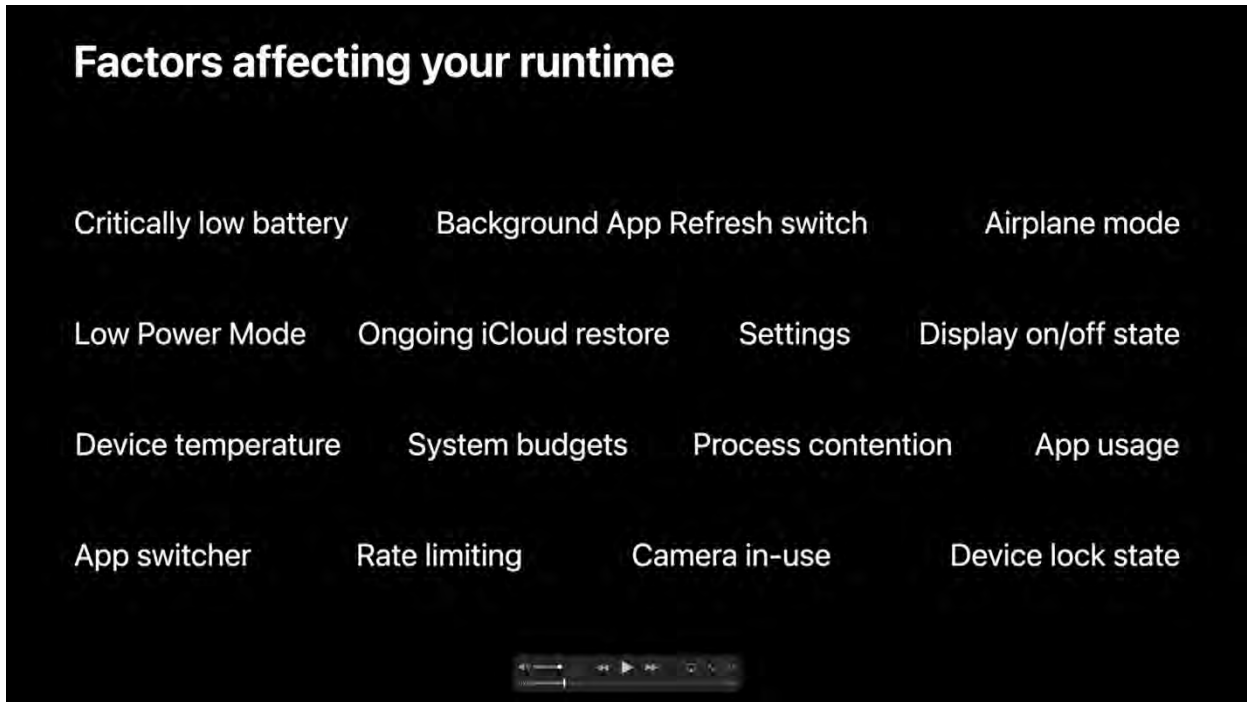

1. If you turn on Low Power Mode, 5G is disabled, except in some cases like video streaming and large downloads on iPhone 12 and iPhone 13 models. With iPhone 12 models, Low Power Mode disables 5G standalone (where available).

2. These devices have ProMotion display: iPhone 13 Pro and later, iPhone 13 Pro Max and later, iPad Pro 10.5-inch, all iPad Pro 11-inch models, and iPad Pro 12.9-inch (2nd generation) and later.

On Android 7.0 (API level 24) and higher, users can enable Data Saver on a device-wide basis in order to optimize their device's data usage, and use less data. This ability is especially useful when roaming, near the end of the billing cycle, or for a small prepaid data pack.</p> <p>When a user enables Data Saver in Settings and the device is on a metered network, the system blocks background data usage and signals apps to use less data in the foreground wherever possible. Users can allow specific apps to use background metered data usage even when Data Saver is turned on.</p> <p>Android 7.0 (API level 24) extends the ConnectivityManager API to provide apps with a way to retrieve the user's Data Saver preferences and monitor preference changes. It is considered good practice for apps to check whether the user has enabled Data Saver and make an effort to limit foreground and background data usage.</p> </div>

Claim	Public Documentation
	<div data-bbox="594 245 1581 800"><h3>Check data saver preferences</h3><p>On Android 7.0 (API level 24) and higher, apps can use the <code>ConnectivityManager</code> API to determine what data usage restrictions are being applied. The <code>getRestrictBackgroundStatus()</code> method returns one of the following values:</p><p><code>RESTRICT_BACKGROUND_STATUS_DISABLED</code></p><p>Data Saver is disabled.</p><p><code>RESTRICT_BACKGROUND_STATUS_ENABLED</code></p><p>The user has enabled Data Saver for this app. Apps should make an effort to limit data usage in the foreground and gracefully handle restrictions to background data usage.</p><p><code>RESTRICT_BACKGROUND_STATUS_WHITELISTED</code></p><p>The user has enabled Data Saver but the app is allowed to bypass it. Apps should still make an effort to limit foreground and background data usage.</p><p>Limit data usage whenever the device is connected to a metered network, even if Data Saver is disabled or the app is allowed to bypass it. The following sample code uses <code>ConnectivityManager.isActiveNetworkMetered()</code> and <code>ConnectivityManager.getRestrictBackgroundStatus()</code> to determine how much data the app should use:</p></div> <p data-bbox="594 816 1596 849">; https://developer.android.com/training/monitoring-device-state/doze-standby;</p> <div data-bbox="594 857 1833 1357"><h2>Optimize for Doze and App Standby </h2><p>Starting from Android 6.0 (API level 23), Android introduces two power-saving features that extend battery life for users by managing how apps behave when a device is not connected to a power source. <i>Doze</i> reduces battery consumption by deferring background CPU and network activity for apps when the device is unused for long periods of time. <i>App Standby</i> defers background network activity for apps with which the user has not recently interacted.</p><p>While the device is in Doze, apps' access to certain battery-intensive resources is deferred until maintenance windows. The specific restrictions are listed in Power Management Restrictions.</p><p>Doze and App Standby manage the behavior of all apps running on Android 6.0 or higher, regardless whether they are specifically targeting API level 23. To ensure the best experience for users, test your app in Doze and App Standby modes and make any necessary adjustments to your code. The sections below provide details.</p></div>

Claim	Public Documentation
	<div data-bbox="594 245 1549 870"> <h3>Understanding Doze</h3> <p>If a user leaves a device unplugged and stationary for a period of time, with the screen off, the device enters Doze mode. In Doze mode, the system attempts to conserve battery by restricting apps' access to network and CPU-intensive services. It also prevents apps from accessing the network and defers their jobs, syncs, and standard alarms.</p> <p>Periodically, the system exits Doze for a brief time to let apps complete their deferred activities. During this <i>maintenance window</i>, the system runs all pending syncs, jobs, and alarms, and lets apps access the network.</p>  <p>Figure 1. Doze provides a recurring maintenance window for apps to use the network and handle pending activities.</p> </div> <div data-bbox="594 894 1648 1065"> <p>At the conclusion of each maintenance window, the system again enters Doze, suspending network access and deferring jobs, syncs, and alarms. Over time, the system schedules maintenance windows less and less frequently, helping to reduce battery consumption in cases of longer-term inactivity when the device is not connected to a charger.</p> <p>As soon as the user wakes the device by moving it, turning on the screen, or connecting a charger, the system exits Doze and all apps return to normal activity.</p> </div> <div data-bbox="594 1089 1831 1219"> <p>The Doze restriction on network access is also likely to affect your app, especially if the app relies on real-time messages such as tickles or notifications. If your app requires a persistent connection to the network to receive messages, you should use Firebase Cloud Messaging (FCM) if possible.</p> </div> <p>; https://developer.android.com/topic/performance/appstandby:</p>

App Standby Buckets

Android 9 (API level 28) and higher support **App Standby Buckets**. App Standby Buckets help the system prioritize apps' requests for resources based on how recently and how frequently the apps are used. Based on app usage patterns, each app is placed in one of five priority **buckets**. The system limits the device resources available to each app based on which bucket the app is in.

Priority buckets

The system dynamically assigns each app to a priority bucket, reassigning the apps as needed. The system may rely on a preloaded app that uses machine learning to determine how likely each app is to be used, and assigns apps to the appropriate buckets. If the system app is not present on a device, the system defaults to sorting apps based on how recently they were used. More active apps are assigned to buckets that give the apps higher priority, making more system resources available to the app. In particular, the bucket determines how frequently the app's jobs run, and how often the app can trigger alarms. These restrictions apply only while the device is on battery power; the system does not impose these restrictions on apps while the device is charging.

★ **Note:** Every manufacturer can set their own criteria for how non-active apps are assigned to buckets. You should not try to influence which bucket your app is assigned to. Instead, focus on making sure your app behaves well in whatever bucket it might be in. Your app can find out what bucket it's currently in by calling `UsageStatsManager.getAppStandbyBucket()`.

The buckets are:

1. **Active:** App is currently being used or was very recently used.
2. **Working set:** App is in regular use.
3. **Frequent:** App is often used, but not every day.
4. **Rare:** App is not frequently used.
5. **Restricted:** App consumes a great deal of system resources, or may exhibit undesirable behavior.

In addition, there's a special **never** bucket for apps that have been installed but have never been run. The system imposes severe restrictions on these apps.

	<div data-bbox="596 245 1831 631">Definition of background work<p>An app is running in the <i>background</i> when both the following conditions are satisfied:</p><ul style="list-style-type: none">• None of the app's activities are currently visible to the user.• The app isn't running any foreground services that started while an activity from the app was visible to the user.<p>Otherwise, the app is running in the <i>foreground</i>.</p></div> <p data-bbox="588 651 1350 683">; https://developer.android.com/guide/components/services;</p>

Types of Services

These are the three different types of services:

Foreground

A foreground service performs some operation that is noticeable to the user. For example, an audio app would use a foreground service to play an audio track. Foreground services must display a [Notification](#). Foreground services continue running even when the user isn't interacting with the app.

When you use a foreground service, you must display a notification so that users are actively aware that the service is running. This notification cannot be dismissed unless the service is either stopped or removed from the foreground.

Learn more about how to configure [foreground services](#) in your app.

★ **Note:** The [WorkManager](#) API offers a flexible way of scheduling tasks, and is able to [run these jobs as foreground services](#) if needed. In many cases, using WorkManager is preferable to using foreground services directly.

Background

A background service performs an operation that isn't directly noticed by the user. For example, if an app used a service to compact its storage, that would usually be a background service.

★ **Note:** If your app targets API level 26 or higher, the system imposes [restrictions on running background services](#) when the app itself isn't in the foreground. In most situations, for example, you shouldn't [access location information from the background](#). Instead, [schedule tasks using WorkManager](#).

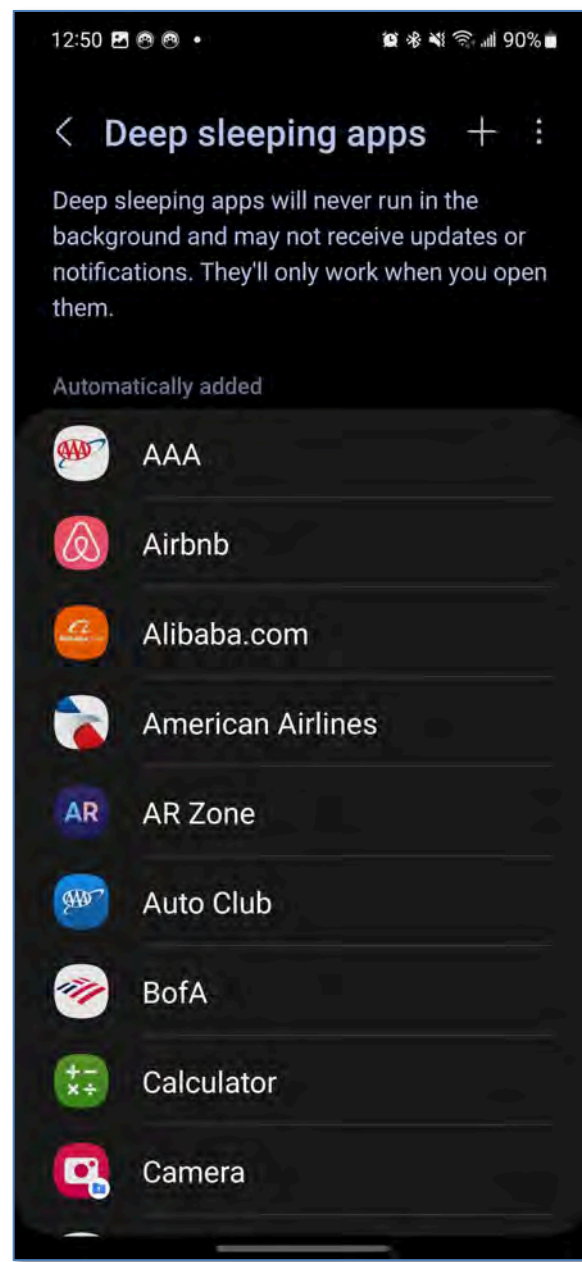

Bound

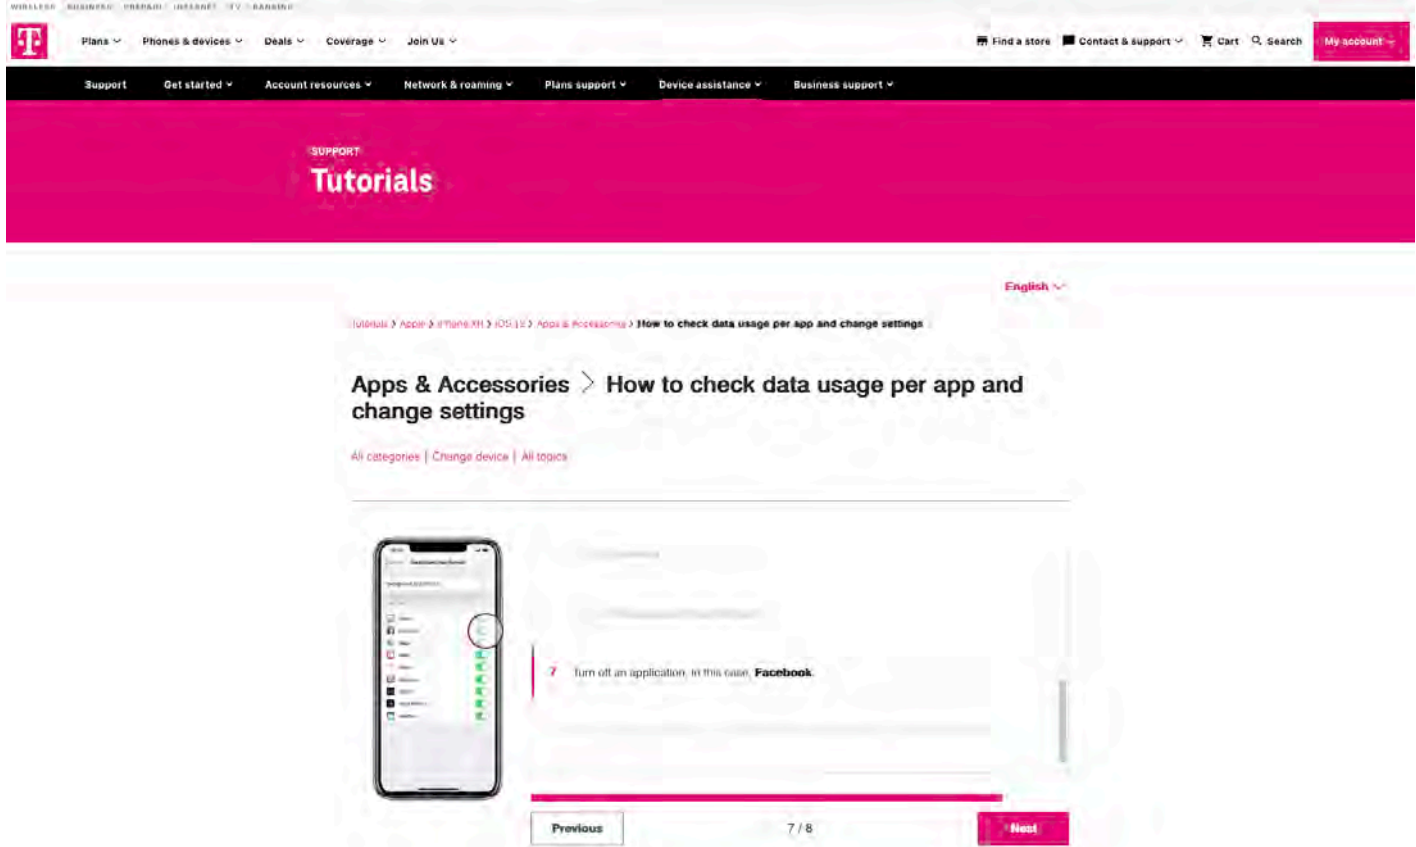

A service is *bound* when an application component binds to it by calling [bindService\(\)](#). A bound service offers a client-server interface that allows components to interact with the service, send requests, receive results, and even do so across processes with interprocess communication (IPC). A bound service runs only as long as another application component is bound to it. Multiple components can bind to the service at once, but when all of them unbind, the service is destroyed.

Use Low Power Mode to save battery life on your iPhone or iPad

Low Power Mode reduces the amount of power that your iPhone or iPad uses when the battery gets low.

To turn Low Power Mode on or off, go to Settings > Battery. You can also turn Low Power Mode on and off from Control Center. Go to Settings > Control Center > Customize Controls, then select Low Power Mode to add it to Control Center.

When Low Power Mode is on, your iPhone or iPad will last longer before you need to charge it, but some features might take longer to update or complete. Also, some tasks might not work until you turn off Low Power Mode, or until you charge your iPhone or iPad to 80% or higher.

Low Power Mode reduces or affects these features:

- 5G (except for video streaming) on iPhone 12 and iPhone 13 models¹
- Auto-Lock (defaults to 30 seconds)
- Display brightness
- Display refresh rate (limited up to 60 Hz) on iPhone and iPad models with ProMotion display²
- Some visual effects
- iCloud Photos (temporarily paused)
- Automatic downloads
- Email fetch
- Background app refresh

When Low Power Mode is on, the battery in the status bar will be yellow. You'll see a yellow battery icon  and the battery percentage. After you charge your iPhone or iPad to 80% or higher, Low Power Mode automatically turns off.

1. If you turn on Low Power Mode, 5G is disabled, except in some cases like video streaming and large downloads on iPhone 12 and iPhone 13 models. With iPhone 12 models, Low Power Mode disables 5G standalone (where available).

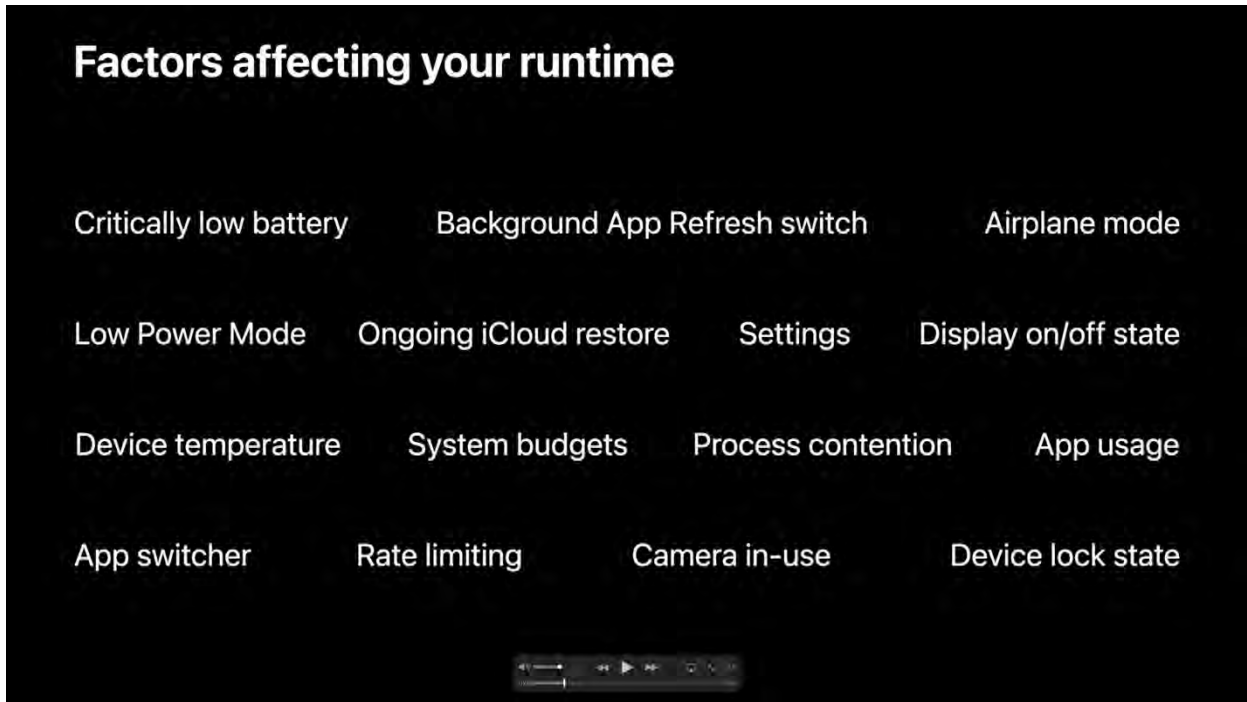

2. These devices have ProMotion display: iPhone 13 Pro and later, iPhone 13 Pro Max and later, iPad Pro 10.5-inch, all iPad Pro 11-inch models, and iPad Pro 12.9-inch (2nd generation) and later.

Use Low Power Mode to save battery life on your iPhone or iPad

Low Power Mode reduces the amount of power that your iPhone or iPad uses when the battery gets low.

To turn Low Power Mode on or off, go to Settings > Battery. You can also turn Low Power Mode on and off from Control Center. Go to Settings > Control Center > Customize Controls, then select Low Power Mode to add it to Control Center.

When Low Power Mode is on, your iPhone or iPad will last longer before you need to charge it, but some features might take longer to update or complete. Also, some tasks might not work until you turn off Low Power Mode, or until you charge your iPhone or iPad to 80% or higher.

Low Power Mode reduces or affects these features:

- 5G (except for video streaming) on iPhone 12 and iPhone 13 models¹
- Auto-Lock (defaults to 30 seconds)
- Display brightness
- Display refresh rate (limited up to 60 Hz) on iPhone and iPad models with ProMotion display²
- Some visual effects
- iCloud Photos (temporarily paused)
- Automatic downloads
- Email fetch
- Background app refresh

When Low Power Mode is on, the battery in the status bar will be yellow. You'll see a yellow battery icon  and the battery percentage. After you charge your iPhone or iPad to 80% or higher, Low Power Mode automatically turns off.

1. If you turn on Low Power Mode, 5G is disabled, except in some cases like video streaming and large downloads on iPhone 12 and iPhone 13 models. With iPhone 12 models, Low Power Mode disables 5G standalone (where available).

2. These devices have ProMotion display: iPhone 13 Pro and later, iPhone 13 Pro Max and later, iPad Pro 10.5-inch, all iPad Pro 11-inch models, and iPad Pro 12.9-inch (2nd generation) and later.

On Android 7.0 (API level 24) and higher, users can enable Data Saver on a device-wide basis in order to optimize their device's data usage, and use less data. This ability is especially useful when roaming, near the end of the billing cycle, or for a small prepaid data pack.</p> <p>When a user enables Data Saver in Settings and the device is on a metered network, the system blocks background data usage and signals apps to use less data in the foreground wherever possible. Users can allow specific apps to use background metered data usage even when Data Saver is turned on.</p> <p>Android 7.0 (API level 24) extends the ConnectivityManager API to provide apps with a way to retrieve the user's Data Saver preferences and monitor preference changes. It is considered good practice for apps to check whether the user has enabled Data Saver and make an effort to limit foreground and background data usage.</p> </div>

Claim	Public Documentation
	<div data-bbox="596 245 1579 799"><h3>Check data saver preferences</h3><p>On Android 7.0 (API level 24) and higher, apps can use the <code>ConnectivityManager</code> API to determine what data usage restrictions are being applied. The <code>getRestrictBackgroundStatus()</code> method returns one of the following values:</p><p><code>RESTRICT_BACKGROUND_STATUS_DISABLED</code></p><p>Data Saver is disabled.</p><p><code>RESTRICT_BACKGROUND_STATUS_ENABLED</code></p><p>The user has enabled Data Saver for this app. Apps should make an effort to limit data usage in the foreground and gracefully handle restrictions to background data usage.</p><p><code>RESTRICT_BACKGROUND_STATUS_WHITELISTED</code></p><p>The user has enabled Data Saver but the app is allowed to bypass it. Apps should still make an effort to limit foreground and background data usage.</p><p>Limit data usage whenever the device is connected to a metered network, even if Data Saver is disabled or the app is allowed to bypass it. The following sample code uses <code>ConnectivityManager.isActiveNetworkMetered()</code> and <code>ConnectivityManager.getRestrictBackgroundStatus()</code> to determine how much data the app should use:</p></div> <p data-bbox="596 857 1593 886">; https://developer.android.com/training/monitoring-device-state/doze-standby:</p> <div data-bbox="596 894 1831 1393"><h2>Optimize for Doze and App Standby</h2><p>Starting from Android 6.0 (API level 23), Android introduces two power-saving features that extend battery life for users by managing how apps behave when a device is not connected to a power source. <i>Doze</i> reduces battery consumption by deferring background CPU and network activity for apps when the device is unused for long periods of time. <i>App Standby</i> defers background network activity for apps with which the user has not recently interacted.</p><p>While the device is in Doze, apps' access to certain battery-intensive resources is deferred until maintenance windows. The specific restrictions are listed in Power Management Restrictions.</p><p>Doze and App Standby manage the behavior of all apps running on Android 6.0 or higher, regardless whether they are specifically targeting API level 23. To ensure the best experience for users, test your app in Doze and App Standby modes and make any necessary adjustments to your code. The sections below provide details.</p></div>

Claim	Public Documentation
	<div data-bbox="594 245 1545 870"> <h3>Understanding Doze</h3> <p>If a user leaves a device unplugged and stationary for a period of time, with the screen off, the device enters Doze mode. In Doze mode, the system attempts to conserve battery by restricting apps' access to network and CPU-intensive services. It also prevents apps from accessing the network and defers their jobs, syncs, and standard alarms.</p> <p>Periodically, the system exits Doze for a brief time to let apps complete their deferred activities. During this <i>maintenance window</i>, the system runs all pending syncs, jobs, and alarms, and lets apps access the network.</p>  <p>Figure 1. Doze provides a recurring maintenance window for apps to use the network and handle pending activities.</p> </div> <div data-bbox="594 894 1646 1065"> <p>At the conclusion of each maintenance window, the system again enters Doze, suspending network access and deferring jobs, syncs, and alarms. Over time, the system schedules maintenance windows less and less frequently, helping to reduce battery consumption in cases of longer-term inactivity when the device is not connected to a charger.</p> <p>As soon as the user wakes the device by moving it, turning on the screen, or connecting a charger, the system exits Doze and all apps return to normal activity.</p> </div> <div data-bbox="594 1089 1831 1219"> <p>The Doze restriction on network access is also likely to affect your app, especially if the app relies on real-time messages such as tickles or notifications. If your app requires a persistent connection to the network to receive messages, you should use Firebase Cloud Messaging (FCM) if possible.</p> </div> <p>; https://developer.android.com/topic/performance/appstandby:</p>

App Standby Buckets

Android 9 (API level 28) and higher support **App Standby Buckets**. App Standby Buckets help the system prioritize apps' requests for resources based on how recently and how frequently the apps are used. Based on app usage patterns, each app is placed in one of five priority **buckets**. The system limits the device resources available to each app based on which bucket the app is in.

Priority buckets

The system dynamically assigns each app to a priority bucket, reassigning the apps as needed. The system may rely on a preloaded app that uses machine learning to determine how likely each app is to be used, and assigns apps to the appropriate buckets. If the system app is not present on a device, the system defaults to sorting apps based on how recently they were used. More active apps are assigned to buckets that give the apps higher priority, making more system resources available to the app. In particular, the bucket determines how frequently the app's jobs run, and how often the app can trigger alarms. These restrictions apply only while the device is on battery power; the system does not impose these restrictions on apps while the device is charging.

★ **Note:** Every manufacturer can set their own criteria for how non-active apps are assigned to buckets. You should not try to influence which bucket your app is assigned to. Instead, focus on making sure your app behaves well in whatever bucket it might be in. Your app can find out what bucket it's currently in by calling `UsageStatsManager.getAppStandbyBucket()`.

The buckets are:

1. **Active:** App is currently being used or was very recently used.
2. **Working set:** App is in regular use.
3. **Frequent:** App is often used, but not every day.
4. **Rare:** App is not frequently used.
5. **Restricted:** App consumes a great deal of system resources, or may exhibit undesirable behavior.

In addition, there's a special **never** bucket for apps that have been installed but have never been run. The system imposes severe restrictions on these apps.

Use Low Power Mode to save battery life on your iPhone or iPad

Low Power Mode reduces the amount of power that your iPhone or iPad uses when the battery gets low.

To turn Low Power Mode on or off, go to Settings > Battery. You can also turn Low Power Mode on and off from Control Center. Go to Settings > Control Center > Customize Controls, then select Low Power Mode to add it to Control Center.

When Low Power Mode is on, your iPhone or iPad will last longer before you need to charge it, but some features might take longer to update or complete. Also, some tasks might not work until you turn off Low Power Mode, or until you charge your iPhone or iPad to 80% or higher.

Low Power Mode reduces or affects these features:

- 5G (except for video streaming) on iPhone 12 and iPhone 13 models¹
- Auto-Lock (defaults to 30 seconds)
- Display brightness
- Display refresh rate (limited up to 60 Hz) on iPhone and iPad models with ProMotion display²
- Some visual effects
- iCloud Photos (temporarily paused)
- Automatic downloads
- Email fetch
- Background app refresh

When Low Power Mode is on, the battery in the status bar will be yellow. You'll see a yellow battery icon  and the battery percentage. After you charge your iPhone or iPad to 80% or higher, Low Power Mode automatically turns off.

1. If you turn on Low Power Mode, 5G is disabled, except in some cases like video streaming and large downloads on iPhone 12 and iPhone 13 models. With iPhone 12 models, Low Power Mode disables 5G standalone (where available).

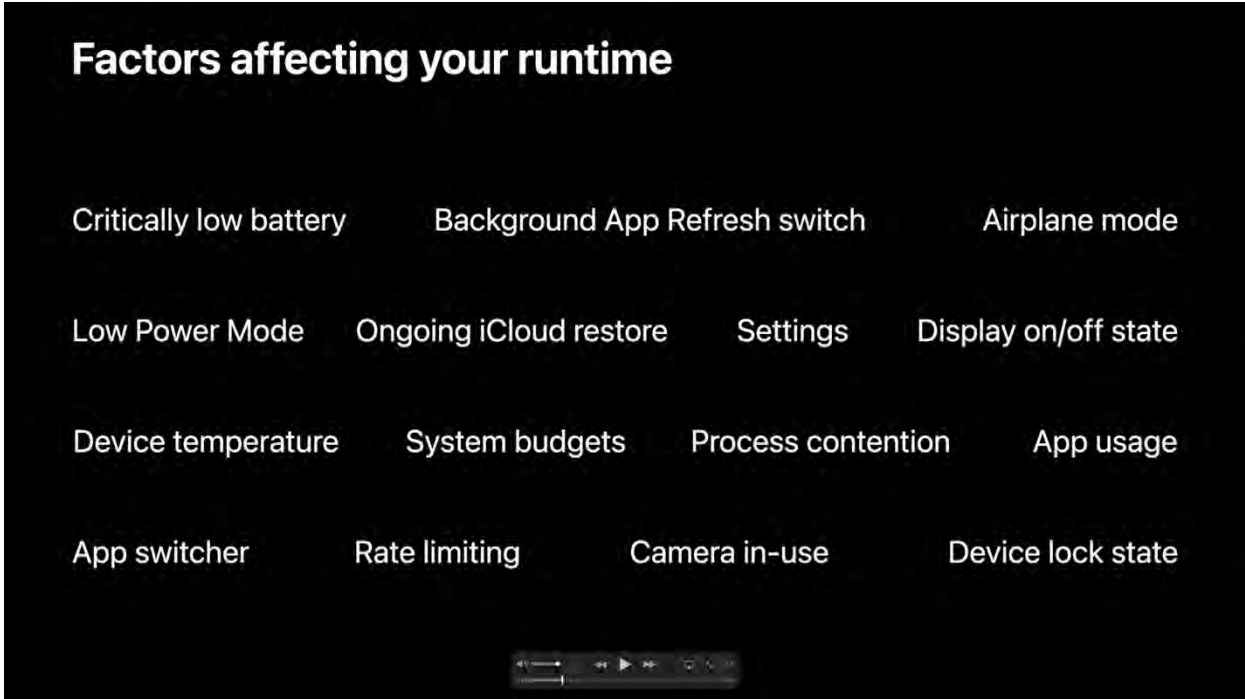

2. These devices have ProMotion display: iPhone 13 Pro and later, iPhone 13 Pro Max and later, iPad Pro 10.5-inch, all iPad Pro 11-inch models, and iPad Pro 12.9-inch (2nd generation) and later.

Low Power Mode reduces the amount of power that your iPhone or iPad uses when the battery gets low.

To turn Low Power Mode on or off, go to Settings > Battery. You can also turn Low Power Mode on and off from Control Center. Go to Settings > Control Center > Customize Controls, then select Low Power Mode to add it to Control Center.

When Low Power Mode is on, your iPhone or iPad will last longer before you need to charge it, but some features might take longer to update or complete. Also, some tasks might not work until you turn off Low Power Mode, or until you charge your iPhone or iPad to 80% or higher.

Low Power Mode reduces or affects these features:

- 5G (except for video streaming) on iPhone 12 and iPhone 13 models¹
- Auto-Lock (defaults to 30 seconds)
- Display brightness
- Display refresh rate (limited up to 60 Hz) on iPhone and iPad models with ProMotion display²
- Some visual effects
- iCloud Photos (temporarily paused)
- Automatic downloads
- Email fetch
- Background app refresh

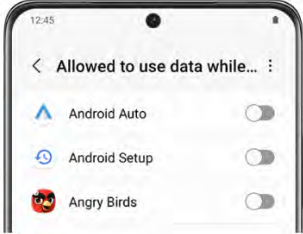

When Low Power Mode is on, the battery in the status bar will be yellow. You'll see a yellow battery icon  and the battery percentage. After you charge your iPhone or iPad to 80% or higher, Low Power Mode automatically turns off.

1. If you turn on Low Power Mode, 5G is disabled, except in some cases like video streaming and large downloads on iPhone 12 and iPhone 13 models. With iPhone 12 models, Low Power Mode disables 5G standalone (where available).

2. These devices have ProMotion display: iPhone 13 Pro and later, iPhone 13 Pro Max and later, iPad Pro 10.5-inch, all iPad Pro 11-inch models, and iPad Pro 12.9-inch (2nd generation) and later.

On Android 7.0 (API level 24) and higher, users can enable Data Saver on a device-wide basis in order to optimize their device's data usage, and use less data. This ability is especially useful when roaming, near the end of the billing cycle, or for a small prepaid data pack.</p> <p>When a user enables Data Saver in Settings and the device is on a metered network, the system blocks background data usage and signals apps to use less data in the foreground wherever possible. Users can allow specific apps to use background metered data usage even when Data Saver is turned on.</p> <p>Android 7.0 (API level 24) extends the ConnectivityManager API to provide apps with a way to retrieve the user's Data Saver preferences and monitor preference changes. It is considered good practice for apps to check whether the user has enabled Data Saver and make an effort to limit foreground and background data usage.</p> </div>

Claim	Public Documentation
	<div data-bbox="596 245 1579 799"><h3>Check data saver preferences</h3><p>On Android 7.0 (API level 24) and higher, apps can use the <code>ConnectivityManager</code> API to determine what data usage restrictions are being applied. The <code>getRestrictBackgroundStatus()</code> method returns one of the following values:</p><p><code>RESTRICT_BACKGROUND_STATUS_DISABLED</code></p><p>Data Saver is disabled.</p><p><code>RESTRICT_BACKGROUND_STATUS_ENABLED</code></p><p>The user has enabled Data Saver for this app. Apps should make an effort to limit data usage in the foreground and gracefully handle restrictions to background data usage.</p><p><code>RESTRICT_BACKGROUND_STATUS_WHITELISTED</code></p><p>The user has enabled Data Saver but the app is allowed to bypass it. Apps should still make an effort to limit foreground and background data usage.</p><p>Limit data usage whenever the device is connected to a metered network, even if Data Saver is disabled or the app is allowed to bypass it. The following sample code uses <code>ConnectivityManager.isActiveNetworkMetered()</code> and <code>ConnectivityManager.getRestrictBackgroundStatus()</code> to determine how much data the app should use:</p></div> <p data-bbox="596 818 1593 850">; https://developer.android.com/training/monitoring-device-state/doze-standby;</p> <div data-bbox="596 857 1831 1356"><h2>Optimize for Doze and App Standby </h2><p>Starting from Android 6.0 (API level 23), Android introduces two power-saving features that extend battery life for users by managing how apps behave when a device is not connected to a power source. <i>Doze</i> reduces battery consumption by deferring background CPU and network activity for apps when the device is unused for long periods of time. <i>App Standby</i> defers background network activity for apps with which the user has not recently interacted.</p><p>While the device is in Doze, apps' access to certain battery-intensive resources is deferred until maintenance windows. The specific restrictions are listed in Power Management Restrictions.</p><p>Doze and App Standby manage the behavior of all apps running on Android 6.0 or higher, regardless whether they are specifically targeting API level 23. To ensure the best experience for users, test your app in Doze and App Standby modes and make any necessary adjustments to your code. The sections below provide details.</p></div>

Claim	Public Documentation
	<div data-bbox="594 245 1545 870"> <h3>Understanding Doze</h3> <p>If a user leaves a device unplugged and stationary for a period of time, with the screen off, the device enters Doze mode. In Doze mode, the system attempts to conserve battery by restricting apps' access to network and CPU-intensive services. It also prevents apps from accessing the network and defers their jobs, syncs, and standard alarms.</p> <p>Periodically, the system exits Doze for a brief time to let apps complete their deferred activities. During this <i>maintenance window</i>, the system runs all pending syncs, jobs, and alarms, and lets apps access the network.</p>  <p>Figure 1. Doze provides a recurring maintenance window for apps to use the network and handle pending activities.</p> </div> <div data-bbox="594 894 1646 1065"> <p>At the conclusion of each maintenance window, the system again enters Doze, suspending network access and deferring jobs, syncs, and alarms. Over time, the system schedules maintenance windows less and less frequently, helping to reduce battery consumption in cases of longer-term inactivity when the device is not connected to a charger.</p> <p>As soon as the user wakes the device by moving it, turning on the screen, or connecting a charger, the system exits Doze and all apps return to normal activity.</p> </div> <div data-bbox="594 1089 1831 1219"> <p>The Doze restriction on network access is also likely to affect your app, especially if the app relies on real-time messages such as tickles or notifications. If your app requires a persistent connection to the network to receive messages, you should use Firebase Cloud Messaging (FCM) if possible.</p> </div> <p>; https://developer.android.com/topic/performance/appstandby:</p>

App Standby Buckets

Android 9 (API level 28) and higher support **App Standby Buckets**. App Standby Buckets help the system prioritize apps' requests for resources based on how recently and how frequently the apps are used. Based on app usage patterns, each app is placed in one of five priority **buckets**. The system limits the device resources available to each app based on which bucket the app is in.

Priority buckets

The system dynamically assigns each app to a priority bucket, reassigning the apps as needed. The system may rely on a preloaded app that uses machine learning to determine how likely each app is to be used, and assigns apps to the appropriate buckets. If the system app is not present on a device, the system defaults to sorting apps based on how recently they were used. More active apps are assigned to buckets that give the apps higher priority, making more system resources available to the app. In particular, the bucket determines how frequently the app's jobs run, and how often the app can trigger alarms. These restrictions apply only while the device is on battery power; the system does not impose these restrictions on apps while the device is charging.

★ **Note:** Every manufacturer can set their own criteria for how non-active apps are assigned to buckets. You should not try to influence which bucket your app is assigned to. Instead, focus on making sure your app behaves well in whatever bucket it might be in. Your app can find out what bucket it's currently in by calling `UsageStatsManager.getAppStandbyBucket()`.

The buckets are:

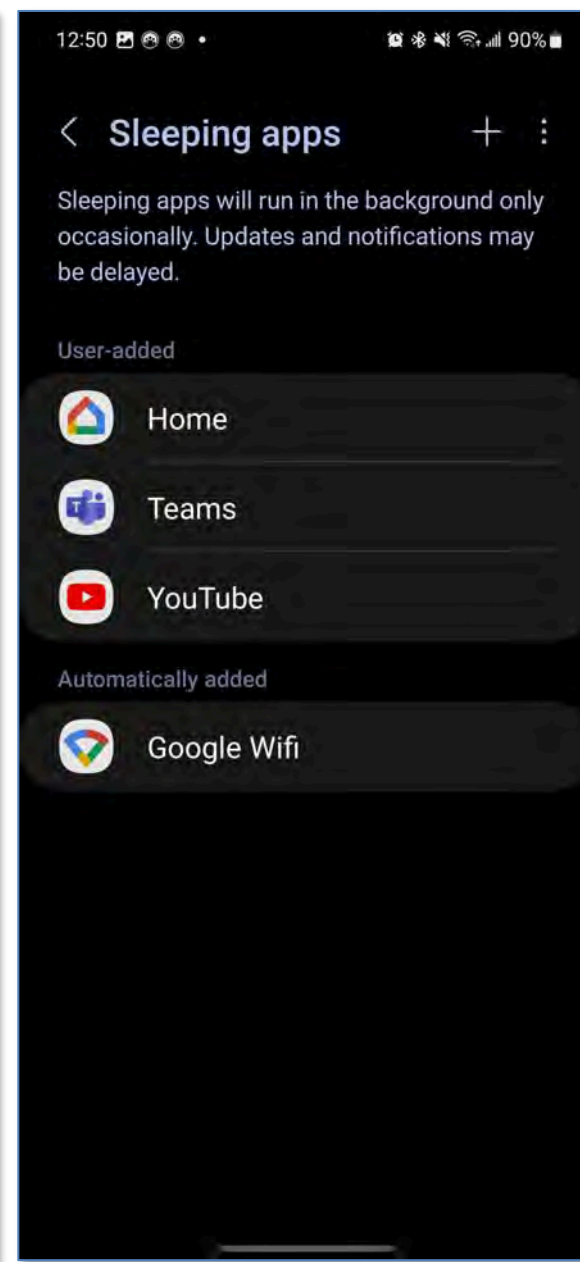

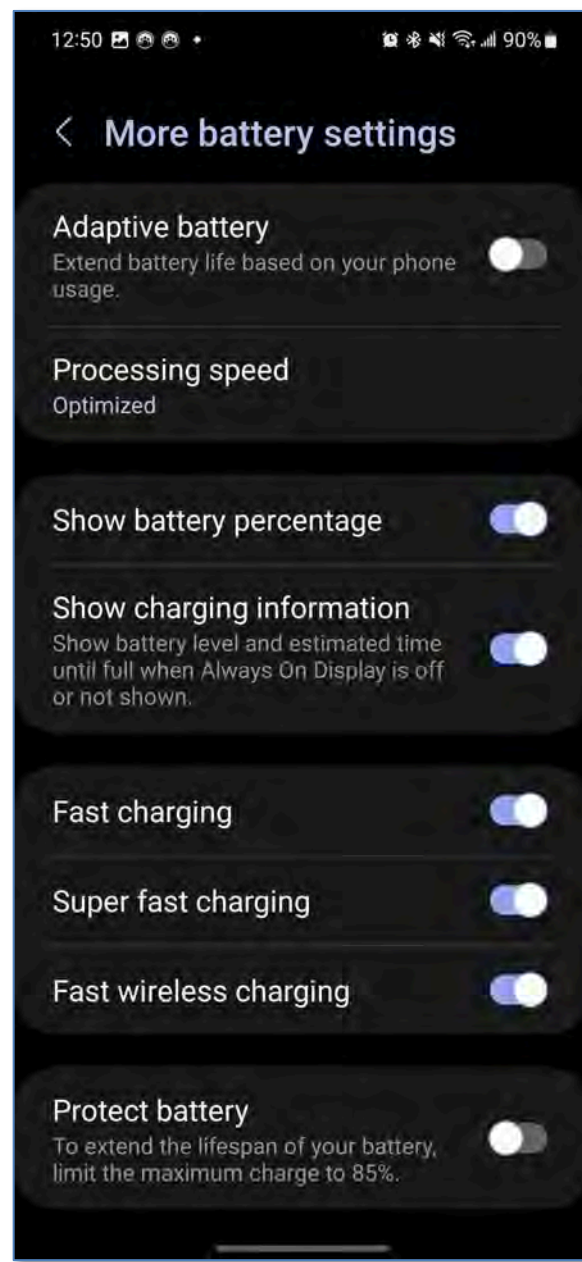

1. **Active:** App is currently being used or was very recently used.
2. **Working set:** App is in regular use.
3. **Frequent:** App is often used, but not every day.
4. **Rare:** App is not frequently used.
5. **Restricted:** App consumes a great deal of system resources, or may exhibit undesirable behavior.

In addition, there's a special **never** bucket for apps that have been installed but have never been run. The system imposes severe restrictions on these apps.

On Android 7.0 (API level 24) and higher, users can enable Data Saver on a device-wide basis in order to optimize their device's data usage, and use less data. This ability is especially useful when roaming, near the end of the billing cycle, or for a small prepaid data pack.</p> <p>When a user enables Data Saver in Settings and the device is on a metered network, the system blocks background data usage and signals apps to use less data in the foreground wherever possible. Users can allow specific apps to use background metered data usage even when Data Saver is turned on.</p> <p>Android 7.0 (API level 24) extends the ConnectivityManager API to provide apps with a way to retrieve the user's Data Saver preferences and monitor preference changes. It is considered good practice for apps to check whether the user has enabled Data Saver and make an effort to limit foreground and background data usage.</p> </div>

Claim	Public Documentation
	<div data-bbox="596 245 1579 799"> <p>Check data saver preferences</p> <p>On Android 7.0 (API level 24) and higher, apps can use the <code>ConnectivityManager</code> API to determine what data usage restrictions are being applied. The <code>getRestrictBackgroundStatus()</code> method returns one of the following values:</p> <p><code>RESTRICT_BACKGROUND_STATUS_DISABLED</code></p> <p>Data Saver is disabled.</p> <p><code>RESTRICT_BACKGROUND_STATUS_ENABLED</code></p> <p>The user has enabled Data Saver for this app. Apps should make an effort to limit data usage in the foreground and gracefully handle restrictions to background data usage.</p> <p><code>RESTRICT_BACKGROUND_STATUS_WHITELISTED</code></p> <p>The user has enabled Data Saver but the app is allowed to bypass it. Apps should still make an effort to limit foreground and background data usage.</p> <p>Limit data usage whenever the device is connected to a metered network, even if Data Saver is disabled or the app is allowed to bypass it. The following sample code uses <code>ConnectivityManager.isActiveNetworkMetered()</code> and <code>ConnectivityManager.getRestrictBackgroundStatus()</code> to determine how much data the app should use:</p> </div> <p data-bbox="596 889 1596 922">; https://developer.android.com/training/monitoring-device-state/doze-standby:</p> <div data-bbox="596 930 1831 1425"> <p>Optimize for Doze and App Standby</p> <p>Starting from Android 6.0 (API level 23), Android introduces two power-saving features that extend battery life for users by managing how apps behave when a device is not connected to a power source. <i>Doze</i> reduces battery consumption by deferring background CPU and network activity for apps when the device is unused for long periods of time. <i>App Standby</i> defers background network activity for apps with which the user has not recently interacted.</p> <p>While the device is in Doze, apps' access to certain battery-intensive resources is deferred until maintenance windows. The specific restrictions are listed in Power Management Restrictions.</p> <p>Doze and App Standby manage the behavior of all apps running on Android 6.0 or higher, regardless whether they are specifically targeting API level 23. To ensure the best experience for users, test your app in Doze and App Standby modes and make any necessary adjustments to your code. The sections below provide details.</p> </div>

Claim	Public Documentation
	<div data-bbox="594 245 1545 870"> <h3>Understanding Doze</h3> <p>If a user leaves a device unplugged and stationary for a period of time, with the screen off, the device enters Doze mode. In Doze mode, the system attempts to conserve battery by restricting apps' access to network and CPU-intensive services. It also prevents apps from accessing the network and defers their jobs, syncs, and standard alarms.</p> <p>Periodically, the system exits Doze for a brief time to let apps complete their deferred activities. During this <i>maintenance window</i>, the system runs all pending syncs, jobs, and alarms, and lets apps access the network.</p>  <p>Figure 1. Doze provides a recurring maintenance window for apps to use the network and handle pending activities.</p> </div> <div data-bbox="594 894 1646 1065"> <p>At the conclusion of each maintenance window, the system again enters Doze, suspending network access and deferring jobs, syncs, and alarms. Over time, the system schedules maintenance windows less and less frequently, helping to reduce battery consumption in cases of longer-term inactivity when the device is not connected to a charger.</p> <p>As soon as the user wakes the device by moving it, turning on the screen, or connecting a charger, the system exits Doze and all apps return to normal activity.</p> </div> <div data-bbox="594 1089 1831 1219"> <p>The Doze restriction on network access is also likely to affect your app, especially if the app relies on real-time messages such as tickles or notifications. If your app requires a persistent connection to the network to receive messages, you should use Firebase Cloud Messaging (FCM) if possible.</p> </div> <p>; https://developer.android.com/topic/performance/appstandby:</p>

App Standby Buckets

Android 9 (API level 28) and higher support **App Standby Buckets**. App Standby Buckets help the system prioritize apps' requests for resources based on how recently and how frequently the apps are used. Based on app usage patterns, each app is placed in one of five priority **buckets**. The system limits the device resources available to each app based on which bucket the app is in.

Priority buckets

The system dynamically assigns each app to a priority bucket, reassigning the apps as needed. The system may rely on a preloaded app that uses machine learning to determine how likely each app is to be used, and assigns apps to the appropriate buckets. If the system app is not present on a device, the system defaults to sorting apps based on how recently they were used. More active apps are assigned to buckets that give the apps higher priority, making more system resources available to the app. In particular, the bucket determines how frequently the app's jobs run, and how often the app can trigger alarms. These restrictions apply only while the device is on battery power; the system does not impose these restrictions on apps while the device is charging.

★ **Note:** Every manufacturer can set their own criteria for how non-active apps are assigned to buckets. You should not try to influence which bucket your app is assigned to. Instead, focus on making sure your app behaves well in whatever bucket it might be in. Your app can find out what bucket it's currently in by calling `UsageStatsManager.getAppStandbyBucket()`.

The buckets are:

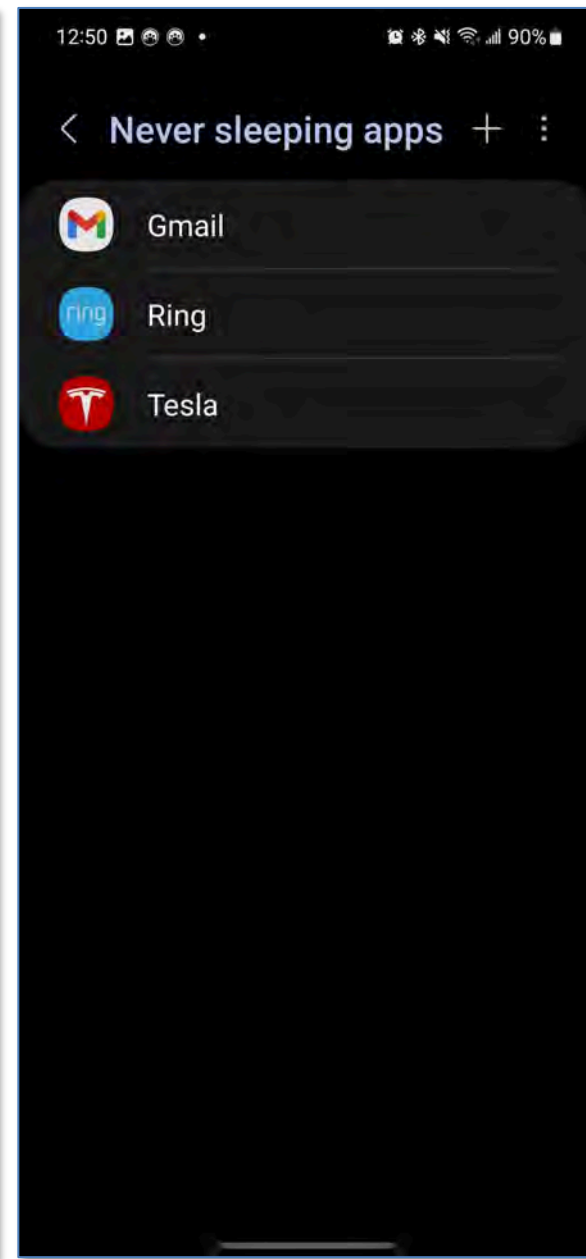

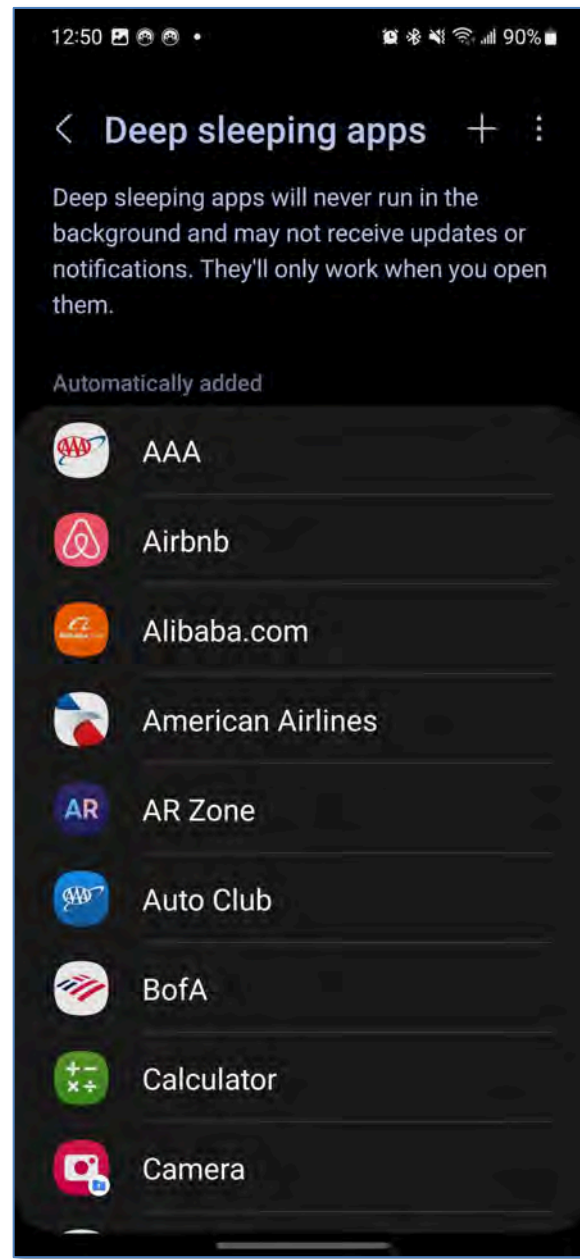

1. **Active:** App is currently being used or was very recently used.
2. **Working set:** App is in regular use.
3. **Frequent:** App is often used, but not every day.
4. **Rare:** App is not frequently used.
5. **Restricted:** App consumes a great deal of system resources, or may exhibit undesirable behavior.

In addition, there's a special **never** bucket for apps that have been installed but have never been run. The system imposes severe restrictions on these apps.

Use Low Power Mode to save battery life on your iPhone or iPad

Low Power Mode reduces the amount of power that your iPhone or iPad uses when the battery gets low.

To turn Low Power Mode on or off, go to Settings > Battery. You can also turn Low Power Mode on and off from Control Center. Go to Settings > Control Center > Customize Controls, then select Low Power Mode to add it to Control Center.

When Low Power Mode is on, your iPhone or iPad will last longer before you need to charge it, but some features might take longer to update or complete. Also, some tasks might not work until you turn off Low Power Mode, or until you charge your iPhone or iPad to 80% or higher.

Low Power Mode reduces or affects these features:

- 5G (except for video streaming) on iPhone 12 and iPhone 13 models¹
- Auto-Lock (defaults to 30 seconds)
- Display brightness
- Display refresh rate (limited up to 60 Hz) on iPhone and iPad models with ProMotion display²
- Some visual effects
- iCloud Photos (temporarily paused)
- Automatic downloads
- Email fetch
- Background app refresh

When Low Power Mode is on, the battery in the status bar will be yellow. You'll see a yellow battery icon  and the battery percentage. After you charge your iPhone or iPad to 80% or higher, Low Power Mode automatically turns off.

1. If you turn on Low Power Mode, 5G is disabled, except in some cases like video streaming and large downloads on iPhone 12 and iPhone 13 models. With iPhone 12 models, Low Power Mode disables 5G standalone (where available).

2. These devices have ProMotion display: iPhone 13 Pro and later, iPhone 13 Pro Max and later, iPad Pro 10.5-inch, all iPad Pro 11-inch models, and iPad Pro 12.9-inch (2nd generation) and later.

<p>in claim 1, wherein identify a service usage activity of the wireless end-user device comprises determine an identifier associated with the first software component, a number associated with the first software component, a name associated with the first software component, or a signature associated with the first software component.</p>	<p>associated with the first software component, a number associated with the first software component, a name associated with the first software component, or a signature associated with the first software component.”</p> <p><i>See</i>, for example, the disclosures identified for claims 1-6, 8-9, and 14.</p>
<p>19. The non-transitory computer-readable storage medium recited in claim 1, wherein the first software component comprises at least a portion of an application on the wireless end-user device.</p>	<p>The Accused Instrumentalities comprise “non-transitory computer-readable storage medium recited in claim 1, wherein the first software component comprises at least a portion of an application on the wireless end-user device.”</p> <p><i>See</i>, for example, the disclosures identified for claims 1-6, 8-9, and 14.</p>
<p>20. The non-transitory computer-readable storage medium recited in claim 1, wherein the first software component comprises an operating system component, function, or service.</p>	<p>The Accused Instrumentalities comprise “non-transitory computer-readable storage medium recited in claim 1, wherein the first software component comprises an operating system component, function, or service.”</p> <p><i>See</i>, for example, the disclosures identified for claims 1-6, 8-9, and 14.</p>
<p>21. The non-transitory computer-readable storage medium recited in claim 1, wherein the first software component comprises a software function, utility, process, or tool.</p>	<p>The Accused Instrumentalities comprise “non-transitory computer-readable storage medium recited in claim 1, wherein the first software component comprises a software function, utility, process, or tool.”</p> <p><i>See</i>, for example, the disclosures identified for claims 1-6, 8-9, and 14.</p>

Claim	Public Documentation
<p>22. The non-transitory computer-readable storage medium recited in claim 1, wherein the first software component comprises a plurality of applications, processes, functions, activities, or services.</p>	<p>The Accused Instrumentalities comprise “non-transitory computer-readable storage medium recited in claim 1, wherein the first software component comprises a plurality of applications, processes, functions, activities, or services.”</p> <p><i>See</i>, for example, the disclosures identified for claims 1-6, 8-9, and 14.</p>
<p>23. The non-transitory computer-readable storage medium recited in claim 1, wherein the first software component comprises a Java archive (JAR) file, an application that uses an operating system (OS) function, an application that uses a proxy service function, or an OS process function that supports an application or OS function.</p>	<p>The Accused Instrumentalities comprise “non-transitory computer-readable storage medium recited in claim 1, wherein the first software component comprises a Java archive (JAR) file, an application that uses an operating system (OS) function, an application that uses a proxy service function, or an OS process function that supports an application or OS function.”</p> <p><i>See</i>, for example, the disclosures identified for claims 1-6, 8-9, and 14.</p>
<p>24. The non-transitory computer-readable storage medium recited in claim 1, wherein the network element is communicatively coupled to the wireless end-user device over the wireless network.</p>	<p>The Accused Instrumentalities comprise “non-transitory computer-readable storage medium recited in claim 1, wherein the network element is communicatively coupled to the wireless end-user device over the wireless network.”</p> <p><i>See</i>, for example, the disclosures identified for claims 1-6, 8-9, and 14.</p> <p>As a further example, the Accused Instrumentalities communicate with network elements. <i>See, e.g., See also, e.g.,</i> https://www.t-mobile.com/cell-phone-plans; https://www.t-mobile.com/cell-phone-plans/affordable-data-plans; https://www.t-mobile.com/business?INTNAV=tNav%3ABusiness; https://prepaid.t-mobile.com; https://www.t-mobile.com/cell-phone-plans/international-roaming-plans; https://www.t-mobile.com/support/coverage/domestic-roaming-data; https://www.t-mobile.com/customers/unlimited-roaming-sms-data; https://www.t-mobile.com/apps/t-mobile-app; https://www.t-mobile.com/apps/t-mobile-family-mode; https://www.t-mobile.com/support/devices/not-sold-by-t-mobile/byod-t-mobile-data-and-apn-settings; https://www.t-mobile.com/support/tutorials/device/apple/iphone-x/topic/connections-amp-network/apn-and-data-settings.</p>

Claim	Public Documentation
<p>25. The non-transitory computer-readable storage medium recited in claim 1, wherein the policy is based on an amount of time, a time of day, a day of a week, a schedule, a network busy state, a network performance state, a network quality-of-service state, a priority of the service usage activity, or a combination of these.</p>	<p>The Accused Instrumentalities comprise “non-transitory computer-readable storage medium recited in claim 1, wherein the policy is based on an amount of time, a time of day, a day of a week, a schedule, a network busy state, a network performance state, a network quality-of-service state, a priority of the service usage activity, or a combination of these.”</p> <p><i>See</i>, for example, the disclosures identified for claims 1-6, 8-9, 14, and 24.</p> <p>As a further example, the Accused Instrumentalities comprise policies based on network states. <i>See, e.g.</i>, https://developer.android.com/training/basics/network-ops/reading-network-state; https://developer.android.com/reference/android/net/NetworkCapabilities; https://developer.android.com/about/versions/pie/android-9.0.</p> <p>As a further example, the Accused Instrumentalities comprise policies based on based on an amount of time, a time of day, a day of a week, a schedule, or a combination of one of these or other policies comprised in the exemplary citations found in claims 1-6, 8-9, 14, and 24. <i>See, e.g.</i>, https://www.t-mobile.com/apps/t-mobile-app; https://www.t-mobile.com/apps/t-mobile-family-mode:</p>

Claim	Public Documentation
26. The non-transitory computer-readable storage medium recited in claim 1, wherein the policy is based on a background service class, a background service state, or a combination of these.	<p>The Accused Instrumentalities comprise “non-transitory computer-readable storage medium recited in claim 1, wherein the policy is based on a background service class, a background service state, or a combination of these.”</p> <p><i>See, for example, the disclosures identified for claims 1-6, 8-9, 14, 24, and 25.</i></p>
27. The non-transitory computer-readable storage medium recited in claim 1, wherein the policy is based on at least an aspect of a service plan.	<p>The Accused Instrumentalities comprise “non-transitory computer-readable storage medium recited in claim 1, wherein the policy is based on at least an aspect of a service plan.”</p> <p><i>See, for example, the disclosures identified for claims 1-6, 8-9, 14, 24, and 25.</i></p>
28. The non-transitory computer-readable storage medium recited in claim 1, wherein the policy is based on a behavior of the first software component, a behavior of the service usage activity, a messaging layer behavior, a random back-off, a power state of the wireless end-user device, a usage state of the wireless end-user device, or a combination of these.	<p>The Accused Instrumentalities comprise “non-transitory computer-readable storage medium recited in claim 1, wherein the policy is based on a behavior of the first software component, a behavior of the service usage activity, a messaging layer behavior, a random back-off, a power state of the wireless end-user device, a usage state of the wireless end-user device, or a combination of these.”</p> <p><i>See, for example, the disclosures identified for claims 1-6, 8-9, 14, 24, and 25.</i></p>
29. The non-transitory computer-readable storage medium recited in claim 1, wherein the policy is based on a user interaction with the first software component, a user interaction with the service usage activity, a user interaction with the wireless end-user device, a user interface priority of the service usage activity, or a combination of these.”	<p>The Accused Instrumentalities comprise “non-transitory computer-readable storage medium recited in claim 1, wherein the policy is based on a user interaction with the first software component, a user interaction with the service usage activity, a user interaction with the wireless end-user device, a user interface priority of the service usage activity, or a combination of these.”</p> <p><i>See, for example, the disclosures identified for claims 1-6, 8-9, 14, 24, and 25.</i></p>

Claim	Public Documentation
usage activity, a user interaction with the wireless end-user device, a user interface priority of the service usage activity, or a combination of these.	
30. The non-transitory computer-readable storage medium recited in claim 1, wherein the wireless end-user device is part of a device group, and wherein the policy is associated with the device group.	<p>The Accused Instrumentalities comprise “non-transitory computer-readable storage medium recited in claim 1, wherein the wireless end-user device is part of a device group, and wherein the policy is associated with the device group.”</p> <p><i>See</i>, for example, the disclosures identified for claims 1-6, 8-9, 14, 24, and 25.</p>
31. The non-transitory computer-readable storage medium recited in claim 1, wherein the policy is based on a type of the wireless network.	<p>The Accused Instrumentalities comprise “non-transitory computer-readable storage medium recited in claim 1, wherein the policy is based on a type of the wireless network.”</p> <p><i>See</i>, for example, the disclosures identified for claims 1-6, 8-9, 14, 24, and 25.</p>
32. The non-transitory computer-readable storage medium recited in claim 31, wherein the type of the wireless network is cellular, 2G, 3G, 4G, home, roaming, wireless fidelity (WiFi), or a combination of these.	<p>The Accused Instrumentalities comprise “non-transitory computer-readable storage medium recited in claim 31, wherein the type of the wireless network is cellular, 2G, 3G, 4G, home, roaming, wireless fidelity (WiFi), or a combination of these.”</p> <p><i>See</i>, for example, the disclosures identified for claims 1-6, 8-9, 14, 24, and 25.</p>
33. The non-transitory computer-readable storage medium recited in claim 1, wherein the policy is based on a roaming condition of the wireless end-user device, a	<p>The Accused Instrumentalities comprise “non-transitory computer-readable storage medium recited in claim 1, wherein the policy is based on a roaming condition of the wireless end-user device, a cost associated with communicating over the wireless network, or a combination of these.”</p> <p><i>See</i>, for example, the disclosures identified for claims 1-6, 8-9, 14, 24, and 25.</p>

Claim	Public Documentation
cost associated with communicating over the wireless network, or a combination of these.	
34. The non-transitory computer-readable storage medium recited in claim 1, wherein controlling the service usage activity comprises preventing the first software component from launching, executing, or running.	<p>The Accused Instrumentalities comprise “non-transitory computer-readable storage medium recited in claim 1, wherein controlling the service usage activity comprises preventing the first software component from launching, executing, or running.”</p> <p><i>See</i>, for example, the disclosures identified for claims 1-6, 8-9, 14, 24, and 25.</p>
35. The non-transitory computer-readable storage medium recited in claim 1, wherein the at least an aspect of the policy is based on the user input obtained through the user interface of the wireless end-user device, and wherein the user input identifies the first software component or the service usage activity.	<p>The Accused Instrumentalities comprise “non-transitory computer-readable storage medium recited in claim 1, wherein the at least an aspect of the policy is based on the user input obtained through the user interface of the wireless end-user device, and wherein the user input identifies the first software component or the service usage activity.”</p> <p><i>See</i>, for example, the disclosures identified for claims 1-6, 8-9, 14, 24, and 25.</p>
36. The non-transitory computer-readable storage medium recited in claim 1, wherein the at least an aspect of the policy is based on the user input obtained through the user interface of the wireless end-user device, and wherein the user input identifies a network parameter or a network type.	<p>The Accused Instrumentalities comprise “non-transitory computer-readable storage medium recited in claim 1, wherein the at least an aspect of the policy is based on the user input obtained through the user interface of the wireless end-user device, and wherein the user input identifies a network parameter or a network type.”</p> <p><i>See</i>, for example, the disclosures identified for claims 1-6, 8-9, 14, 24, and 25.</p>

Claim	Public Documentation
<p>37. The non-transitory computer-readable storage medium recited in claim 1, wherein the policy is based on a usage limit or a threshold.</p>	<p>The Accused Instrumentalities comprise “non-transitory computer-readable storage medium recited in claim 1, wherein the policy is based on a usage limit or a threshold.”</p> <p><i>See</i>, for example, the disclosures identified for claims 1-6, 8-9, 14, 24, and 25.</p> <p><i>See also</i>, e.g., https://www.t-mobile.com/support/plans-features/data-speeds.</p>
<p>38. The non-transitory computer-readable storage medium recited in claim 1, wherein the policy is based on a limit, wherein the limit is based on the user input obtained through the user interface of the wireless end-user device, a user preference, an indication of a threshold, a total traffic, a type of traffic, a destination, a port, a frequency of access, an access behavior, or a combination of these.</p>	<p>The Accused Instrumentalities comprise “non-transitory computer-readable storage medium recited in claim 1, wherein the policy is based on a limit, wherein the limit is based on the user input obtained through the user interface of the wireless end-user device, a user preference, an indication of a threshold, a total traffic, a type of traffic, a destination, a port, a frequency of access, an access behavior, or a combination of these.”</p> <p><i>See</i>, for example, the disclosures identified for claims 1-6, 8-9, 14, 24-25, and 37.</p>
<p>39. The non-transitory computer-readable storage medium recited in claim 1, wherein the policy is based on a type of the service usage activity, a priority of the service usage activity, a duration of the service usage activity, a characteristic of the wireless network, a quality-of-service (QoS) rule associated with the service usage activity, or a combination of these.</p>	<p>The Accused Instrumentalities comprise “non-transitory computer-readable storage medium recited in claim 1, wherein the policy is based on a type of the service usage activity, a priority of the service usage activity, a duration of the service usage activity, a characteristic of the wireless network, a quality-of-service (QoS) rule associated with the service usage activity, or a combination of these.”</p> <p><i>See</i>, for example, the disclosures identified for claims 1-6, 8-9, 14, 24-25, and 37.</p>

Claim	Public Documentation
<p>40. The non-transitory computer-readable storage medium recited in claim 1, wherein the policy comprises one or more filters, wherein the one or more filters provide filtering based on: a characteristic of the wireless network, a service plan applicable to the wireless end-user device, a characteristic of the first software component, a time of day, a network busy state, or a combination of these.</p>	<p>The Accused Instrumentalities comprise “non-transitory computer-readable storage medium recited in claim 1, wherein the policy comprises one or more filters, wherein the one or more filters provide filtering based on: a characteristic of the wireless network, a service plan applicable to the wireless end-user device, a characteristic of the first software component, a time of day, a network busy state, or a combination of these.”</p> <p><i>See, for example, the disclosures identified for claims 1-6, 8-9, 14, 24-25, and 37.</i></p>
<p>41. The non-transitory computer-readable storage medium recited in claim 1, wherein the wireless network is a first wireless network, and wherein the service usage activity is a first service usage activity, and wherein the policy assists the one or more processors to control the first service usage activity when the wireless end-user device is connected to the first wireless network and refrain from controlling a second service usage activity when the wireless end-user device is connected to a second wireless network, the second service usage activity being associated with the first software component.</p>	<p>The Accused Instrumentalities comprise “non-transitory computer-readable storage medium recited in claim 1, wherein the wireless network is a first wireless network, and wherein the service usage activity is a first service usage activity, and wherein the policy assists the one or more processors to control the first service usage activity when the wireless end-user device is connected to the first wireless network and refrain from controlling a second service usage activity when the wireless end-user device is connected to a second wireless network, the second service usage activity being associated with the first software component.”</p> <p><i>See, for example, the disclosures identified for claims 1-6, 8-9, 14, 24-25, and 37.</i></p>

Claim	Public Documentation
<p>42. The non-transitory computer-readable storage medium recited in claim 41, wherein control the first service usage activity comprises prevent, restrict, or block the first service usage activity.</p>	<p>The Accused Instrumentalities comprise “non-transitory computer-readable storage medium recited in claim 41, wherein control the first service usage activity comprises prevent, restrict, or block the first service usage activity.”</p> <p><i>See, for example, the disclosures identified for claims 1-6, 8-9, 14, 24-25, 37, and 41.</i></p>
<p>43. The non-transitory computer-readable storage medium recited in claim 1, wherein the second wireless network is a wireless fidelity (WiFi) network or a home network.</p>	<p>The Accused Instrumentalities comprise “non-transitory computer-readable storage medium recited in claim 1, wherein the second wireless network is a wireless fidelity (WiFi) network or a home network.”</p> <p><i>See, for example, the disclosures identified for claims 1-6, 8-9, 14, 24, and 25.</i></p>
<p>44. The non-transitory computer-readable storage medium recited in claim 1, wherein determine whether the service usage activity comprises a background activity comprises determine whether a user is interacting with or has interacted with the first software component.</p>	<p>The Accused Instrumentalities comprise “non-transitory computer-readable storage medium recited in claim 1, wherein determine whether the service usage activity comprises a background activity comprises determine whether a user is interacting with or has interacted with the first software component.”</p> <p><i>See, for example, the disclosures identified for claims 1-6, 8-9, 14, 24, and 25.</i></p>
<p>45. The non-transitory computer-readable storage medium recited in claim 1, wherein determine whether the service usage activity comprises a background activity comprises determine whether the first software component is in a user interface foreground.</p>	<p>The Accused Instrumentalities comprise “non-transitory computer-readable storage medium recited in claim 1, wherein determine whether the service usage activity comprises a background activity comprises determine whether the first software component is in a user interface foreground.”</p> <p><i>See, for example, the disclosures identified for claims 1-6, 8-9, 14, 24, and 25.</i></p>

Claim	Public Documentation
<p>46. The non-transitory computer-readable storage medium recited in claim 1, wherein determine whether the service usage activity comprises a background activity comprises determine whether the service usage activity is a software update.</p>	<p>The Accused Instrumentalities comprise “non-transitory computer-readable storage medium recited in claim 1, wherein determine whether the service usage activity comprises a background activity comprises determine whether the service usage activity is a software update.”</p> <p><i>See, for example, the disclosures identified for claims 1-6, 8-9, 14, 24, and 25.</i></p>
<p>47. The non-transitory computer-readable storage medium recited in claim 1, wherein determine whether the service usage activity comprises a background activity comprises determine whether the first software component is or has been classified as being in a background state or the service usage activity is or has been classified as a background service.</p>	<p>The Accused Instrumentalities comprise “non-transitory computer-readable storage medium recited in claim 1, wherein determine whether the service usage activity comprises a background activity comprises determine whether the first software component is or has been classified as being in a background state or the service usage activity is or has been classified as a background service.”</p> <p><i>See, for example, the disclosures identified for claims 1-6, 8-9, 14, 24, and 25.</i></p>
<p>48. The non-transitory computer-readable storage medium recited in claim 1, wherein determine whether the service usage activity comprises a background activity comprises determine whether the service usage activity is identified by a list specifying one or more background activities.</p>	<p>The Accused Instrumentalities comprise “non-transitory computer-readable storage medium recited in claim 1, wherein determine whether the service usage activity comprises a background activity comprises determine whether the service usage activity is identified by a list specifying one or more background activities.”</p> <p><i>See, for example, the disclosures identified for claims 1-6, 8-9, 14, 24, and 25.</i></p>

Claim	Public Documentation
49. The non-transitory computer-readable storage medium recited in claim 1, wherein determine whether the service usage activity comprises a background activity comprises determine whether the service usage activity is a foreground activity.	<p>The Accused Instrumentalities comprise “non-transitory computer-readable storage medium recited in claim 1, wherein determine whether the service usage activity comprises a background activity comprises determine whether the service usage activity is a foreground activity.”</p> <p><i>See, for example, the disclosures identified for claims 1-6, 8-9, 14, 24, and 25.</i></p>
50. The non-transitory computer-readable storage medium recited in claim 1, wherein determine whether the service usage activity comprises a background activity comprises determine whether the first software component is a foreground component.	<p>The Accused Instrumentalities comprise “non-transitory computer-readable storage medium recited in claim 1, wherein determine whether the service usage activity comprises a background activity comprises determine whether the first software component is a foreground component.”</p> <p><i>See, for example, the disclosures identified for claims 1-6, 8-9, 14, 24, and 25.</i></p>
51[a] The non-transitory computer-readable storage medium recited in claim 1, wherein determine whether the service usage activity comprises a background activity comprises:	<p>The Accused Instrumentalities comprise “non-transitory computer-readable storage medium recited in claim 1, wherein determine whether the service usage activity comprises a background activity comprises.”</p> <p><i>See, for example, the disclosures identified for claims 1-6, 8-9, 14, 24, and 25.</i></p>
51[b] determine a classification of the service usage activity, and	<p>The Accused Instrumentalities further “determine a classification of the service usage activity.”</p> <p><i>See, for example, the disclosures identified for claims 1-6, 8-9, 14, 24, and 25.</i></p>
51[c] based on the classification of the service usage activity, determine whether the service usage	<p>The Accused Instrumentalities “based on the classification of the service usage activity, determine whether the service usage activity comprises the background activity.”</p> <p><i>See, for example, the disclosures identified for claims 1-6, 8-9, 14, 24, and 25.</i></p>

Claim	Public Documentation
activity comprises the background activity.	
<p>52. The non-transitory computer-readable storage medium recited in claim 51, wherein the classification of the service usage activity is based on: whether the first software component requires access to the wireless network, whether the one or more prospective or successful communications over the wireless network comprise an update to the first software component, whether the first software component requires information about the wireless network, whether the first software component requires location information, whether the one or more prospective or successful communications over the wireless network comprise an operating system software update, whether the one or more prospective or successful communications over the wireless network comprise a security software update, whether the one or more prospective or successful communications over the wireless network comprise a communication associated with a network-based back-up, whether the one or more prospective or successful communications over the wireless network comprise a communication associated with an e-mail download, whether the one or more prospective or successful communications over the wireless network comprise communications associated with a cloud synchronization service, or a combination of these.”</p>	<p>The Accused Instrumentalities comprise “non-transitory computer-readable storage medium recited in claim 51, wherein the classification of the service usage activity is based on: whether the first software component requires access to the wireless network, whether the one or more prospective or successful communications over the wireless network comprise an update to the first software component, whether the first software component requires information about the wireless network, whether the first software component requires location information, whether the one or more prospective or successful communications over the wireless network comprise an operating system software update, whether the one or more prospective or successful communications over the wireless network comprise a security software update, whether the one or more prospective or successful communications over the wireless network comprise a communication associated with a network-based back-up, whether the one or more prospective or successful communications over the wireless network comprise a communication associated with an e-mail download, whether the one or more prospective or successful communications over the wireless network comprise communications associated with a cloud synchronization service, or a combination of these.”</p> <p><i>See, for example, the disclosures identified for claims 1-6, 8-9, 14, 24-25, and 51.</i></p>

Claim	Public Documentation
<p>prospective or successful communications over the wireless network comprise a communication associated with an e-mail download, whether the one or more prospective or successful communications over the wireless network comprise communications associated with a cloud synchronization service, or a combination of these.</p>	
<p>53. The non-transitory computer-readable storage medium recited in claim 51, wherein the user input obtained through the user interface of the wireless end-user device is a first user input, and wherein determine a classification of the service usage activity is based on a characteristic of the first software component, a content type associated with the service usage activity, a characteristic of the wireless network, a service plan, a user preference, the first user input, a second user input, the information from the network element, or a combination of these.</p>	<p>The Accused Instrumentalities comprise “non-transitory computer-readable storage medium recited in claim 51, wherein the user input obtained through the user interface of the wireless end-user device is a first user input, and wherein determine a classification of the service usage activity is based on a characteristic of the first software component, a content type associated with the service usage activity, a characteristic of the wireless network, a service plan, a user preference, the first user input, a second user input, the information from the network element, or a combination of these.”</p> <p><i>See</i>, for example, the disclosures identified for claims 1-6, 8-9, 14, 24-25, and 51.</p>
<p>54. The non-transitory computer-readable storage medium recited in claim 1, wherein determine</p>	<p>The Accused Instrumentalities comprise “non-transitory computer-readable storage medium recited in claim 51, wherein the user input obtained through the user interface of the wireless end-user device is a first user input, and wherein determine a classification of the service usage activity is based on a characteristic of the</p>

Claim	Public Documentation
whether the service usage activity comprises a background activity is based on a user interaction with the wireless end-user device.	<p>first software component, a content type associated with the service usage activity, a characteristic of the wireless network, a service plan, a user preference, the first user input, a second user input, the information from the network element, or a combination of these.”</p> <p><i>See, for example, the disclosures identified for claims 1-6, 8-9, 14, 24, and 25.</i></p>
55. The non-transitory computer-readable storage medium recited in claim 1, wherein determine whether the service usage activity comprises a background activity comprises determine whether a value comprising a measure of the service usage activity satisfies a condition relative to a threshold.	<p>The Accused Instrumentalities comprise “non-transitory computer-readable storage medium recited in claim 1, wherein determine whether the service usage activity comprises a background activity comprises determine whether a value comprising a measure of the service usage activity satisfies a condition relative to a threshold.”</p> <p><i>See, for example, the disclosures identified for claims 1-6, 8-9, 14, 24, and 25.</i></p>
56. The non-transitory computer-readable storage medium recited in claim 1, wherein determine whether the service usage activity comprises a background activity comprises determine whether the first software component is a foreground component or an unclassified component.	<p>The Accused Instrumentalities comprise “non-transitory computer-readable storage medium recited in claim 1, wherein determine whether the service usage activity comprises a background activity comprises determine whether the first software component is a foreground component or an unclassified component.”</p> <p><i>See, for example, the disclosures identified for claims 1-6, 8-9, 14, 24, and 25.</i></p>
57. Claim	Public Documentation
foreground of user interaction or determine whether the first software component is in a background of user interaction.	
58. The non-transitory computer-readable storage medium recited in claim 1, wherein determine whether the service usage activity comprises a background activity comprises determine whether content associated with the service usage activity is in a foreground of a user interface of the wireless end-user device.	<p>The Accused Instrumentalities comprise “non-transitory computer-readable storage medium recited in claim 1, wherein determine whether the service usage activity comprises a background activity comprises determine whether content associated with the service usage activity is in a foreground of a user interface of the wireless end-user device.”</p> <p><i>See</i>, for example, the disclosures identified for claims 1-6, 8-9, 14, 24, and 25.</p>
59. The non-transitory computer-readable storage medium recited in claim 1, wherein determine whether the service usage activity comprises a background activity comprises determine whether the first software component is active.	<p>The Accused Instrumentalities comprise “non-transitory computer-readable storage medium recited in claim 1, wherein determine whether the service usage activity comprises a background activity comprises determine whether the first software component is active.”</p> <p><i>S See</i>, for example, the disclosures identified for claims 1-6, 8-9, 14, 24, and 25.</p>
60. The non-transitory computer-readable storage medium recited in claim 1, wherein apply the policy comprises at least assist in allowing, restricting, delaying, throttling, or preventing the service usage activity.	<p>The Accused Instrumentalities comprise “non-transitory computer-readable storage medium recited in claim 1, wherein apply the policy comprises at least assist in allowing, restricting, delaying, throttling, or preventing the service usage activity.”</p> <p><i>See</i>, for example, the disclosures identified for claims 1-6, 8-9, 14, 24, and 25.</p>

Claim	Public Documentation
<p>61. The non-transitory computer-readable storage medium recited in claim 1, wherein apply the policy comprises at least assist in: blocking access to the wireless network, restricting access to the wireless network, delaying access to the wireless network, or aggregating and holding the service usage activity.</p>	<p>The Accused Instrumentalities comprise “non-transitory computer-readable storage medium recited in claim 1, wherein apply the policy comprises at least assist in: blocking access to the wireless network, restricting access to the wireless network, delaying access to the wireless network, or aggregating and holding the service usage activity.”</p> <p><i>See, for example, the disclosures identified for claims 1-6, 8-9, 14, 24, and 25.</i></p>
<p>62. The non-transitory computer-readable storage medium recited in claim 1, wherein apply the policy comprises at least assist in queuing, time-windowing, suspending, quarantining, killing, or removing the service usage activity.</p>	<p>The Accused Instrumentalities comprise “non-transitory computer-readable storage medium recited in claim 1, wherein apply the policy comprises at least assist in queuing, time-windowing, suspending, quarantining, killing, or removing the service usage activity.”</p> <p><i>See, for example, the disclosures identified for claims 1-6, 8-9, 14, 24, and 25.</i></p>
<p>63. The non-transitory computer-readable storage medium recited in claim 1, wherein apply the policy comprises at least assist in preventing an update associated with the first software component.</p>	<p>The Accused Instrumentalities comprise “non-transitory computer-readable storage medium recited in claim 1, wherein apply the policy comprises at least assist in preventing an update associated with the first software component.”</p> <p><i>See, for example, the disclosures identified for claims 1-6, 8-9, 14, 24, and 25.</i></p>
<p>64. The non-transitory computer-readable storage medium recited in claim 1, wherein the one or more prospective or successful communications over the wireless</p>	<p>The Accused Instrumentalities comprise “non-transitory computer-readable storage medium recited in claim 1, wherein the one or more prospective or successful communications over the wireless network comprise one or more Internet protocol (IP) address requests, and wherein apply the policy comprises at least assist in withholding, delaying, time-windowing, reducing in frequency, or aggregating at least a portion of the service usage activity.”</p>

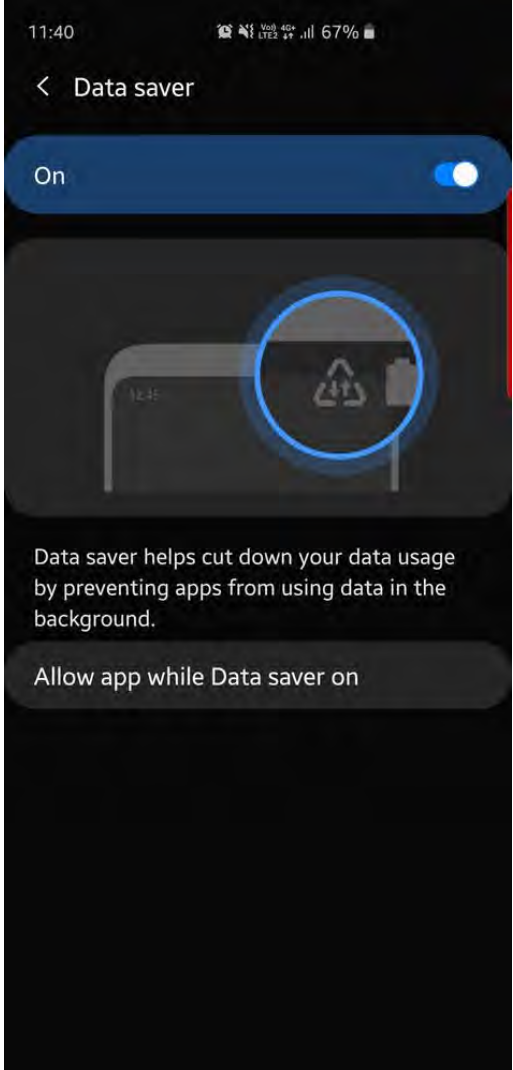

Claim	Public Documentation
network comprise one or more Internet protocol (IP) address requests, and wherein apply the policy comprises at least assist in withholding, delaying, time-windowing, reducing in frequency, or aggregating at least a portion of the service usage activity.	<i>See</i> , for example, the disclosures identified for claims 1-6, 8-9, 14, 24, and 25.
65. The non-transitory computer-readable storage medium recited in claim 1, wherein the information from the network element is first information, and wherein apply the policy comprises provide second information to the first software component.	<p>The Accused Instrumentalities comprise “non-transitory computer-readable storage medium recited in claim 1, wherein the information from the network element is first information, and wherein apply the policy comprises provide second information to the first software component.”</p> <p><i>See</i>, for example, the disclosures identified for claims 1-6, 8-9, 14, 24, and 25.</p>
66. The non-transitory computer-readable storage medium recited in claim 65, wherein provide second information to the first software component comprises provide the second information through an application programming interface.	<p>The Accused Instrumentalities comprise “non-transitory computer-readable storage medium recited in claim 65, wherein provide second information to the first software component comprises provide the second information through an application programming interface.”</p> <p><i>See</i>, for example, the disclosures identified for claims 1-6, 8-9, 14, 24-25, and 65.</p>
67[a] The non-transitory computer-readable storage medium recited in claim 65, wherein, when executed by the one or more processors of the wireless end-user	<p>The Accused Instrumentalities comprise “non-transitory computer-readable storage medium recited in claim 65, wherein, when executed by the one or more processors of the wireless end-user device, the machine-executable instructions further cause the one or more processors to.”</p> <p><i>See</i>, for example, the disclosures identified for claims 1-6, 8-9, 14, 24-25, and 65.</p>

Claim	Public Documentation
device, the machine-executable instructions further cause the one or more processors to:	
67[b] provide third information to a second software component on the wireless end-user device, the third information being different from the second information.	<p>The Accused Instrumentalities further “provide third information to a second software component on the wireless end-user device, the third information being different from the second information.”</p> <p><i>See</i>, for example, the disclosures identified for claims 1-6, 8-9, 14, 24-25, and 65.</p>
68. The non-transitory computer-readable storage medium recited in claim 67, wherein provide third information to a second software component on the wireless end-user device comprises provide the third information through an application programming interface.	<p>The Accused Instrumentalities comprise “non-transitory computer-readable storage medium recited in claim 67, wherein provide third information to a second software component on the wireless end-user device comprises provide the third information through an application programming interface.”</p> <p><i>See</i>, for example, the disclosures identified for claims 1-6, 8-9, 14, 24-25, 65, and 67.</p>
69. The non-transitory computer-readable storage medium recited in claim 67, wherein the third information enables the second software component to communicate over the wireless network.	<p>The Accused Instrumentalities comprise “non-transitory computer-readable storage medium recited in claim 67, wherein the third information enables the second software component to communicate over the wireless network.”</p> <p><i>See</i>, for example, the disclosures identified for claims 1-6, 8-9, 14, 24-25, 65, and 67.</p>
70. The non-transitory computer-readable storage medium recited in claim 65, wherein the wireless network is a first wireless network, and wherein the second information comprises a network	<p>The Accused Instrumentalities comprise “non-transitory computer-readable storage medium recited in claim 65, wherein the wireless network is a first wireless network, and wherein the second information comprises a network access condition of the first wireless network, a network busy state associated with the first wireless network, a network availability state associated with the first wireless network, a network busy state associated with a second wireless network, a network availability state associated with the second wireless network, or information about the policy.”</p>

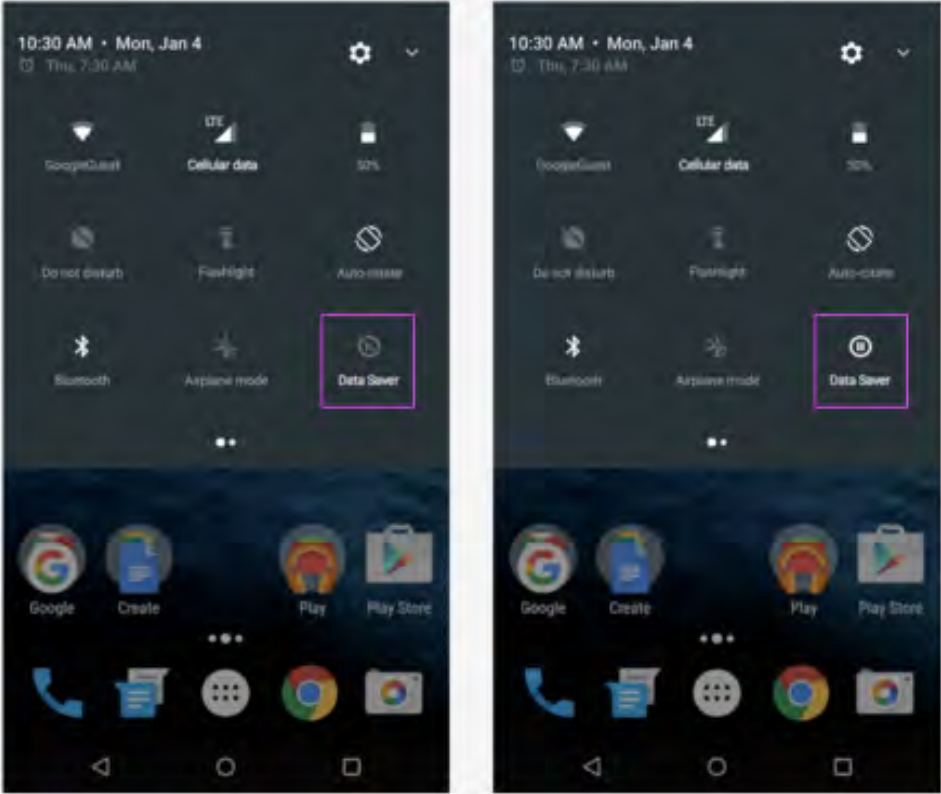

Claim	Public Documentation
<p>access condition of the first wireless network, a network busy state associated with the first wireless network, a network availability state associated with the first wireless network, a network busy state associated with a second wireless network, a network availability state associated with the second wireless network, or information about the policy.</p>	<p><i>See</i>, for example, the disclosures identified for claims 1-6, 8-9, 14, 24-25, 65, and 67.</p>
<p>71. The non-transitory computer-readable storage medium recited in claim 65, wherein the second information comprises a setting for assisting the first software component in restricting, allowing, blocking, throttling, deferring, time-scheduling, or queuing the service usage activity.</p>	<p>The Accused Instrumentalities comprise “non-transitory computer-readable storage medium recited in claim 65, wherein the second information comprises a setting for assisting the first software component in restricting, allowing, blocking, throttling, deferring, time-scheduling, or queuing the service usage activity.”</p> <p><i>See</i>, for example, the disclosures identified for claims 1-6, 8-9, 14, 24-25, and 65.</p>
<p>72. The non-transitory computer-readable storage medium recited in claim 71, wherein the setting is based on a characteristic of the wireless network, a network busy state associated with the wireless network, a time, a service plan associated with the wireless end-user device, a classification of the service usage activity, or a combination of these.</p>	<p>The Accused Instrumentalities comprise “non-transitory computer-readable storage medium recited in claim 71, wherein the setting is based on a characteristic of the wireless network, a network busy state associated with the wireless network, a time, a service plan associated with the wireless end-user device, a classification of the service usage activity, or a combination of these.”</p> <p><i>See</i>, for example, the disclosures identified for claims 1-6, 8-9, 14, 24-25, 65, and 71.</p>

Claim	Public Documentation
73. The non-transitory computer-readable storage medium recited in claim 1, wherein apply the policy comprises inform the first software component whether the first software component is allowed to access the wireless network.	<p>The Accused Instrumentalities comprise “non-transitory computer-readable storage medium recited in claim 1, wherein apply the policy comprises inform the first software component whether the first software component is allowed to access the wireless network.”</p> <p><i>See, for example, the disclosures identified for claims 1-6, 8-9, 14, 24, and 25.</i></p>
74. The non-transitory computer-readable storage medium recited in claim 1, wherein apply the policy comprises inform the first software component whether the wireless network is available.	<p>The Accused Instrumentalities comprise “non-transitory computer-readable storage medium recited in claim 1, wherein apply the policy comprises inform the first software component whether the wireless network is available.”</p> <p><i>See, for example, the disclosures identified for claims 1-6, 8-9, 14, 24, and 25.</i></p>
75. The non-transitory computer-readable storage medium recited in claim 1, wherein apply the policy comprises inform the first software component of a traffic control to be implemented or applied by the first software component.	<p>The Accused Instrumentalities comprise “non-transitory computer-readable storage medium recited in claim 1, wherein apply the policy comprises inform the first software component of a traffic control to be implemented or applied by the first software component.”</p> <p><i>See, for example, the disclosures identified for claims 1-6, 8-9, 14, 24, and 25.</i></p>
76. The non-transitory computer-readable storage medium recited in claim 1, wherein the information from the network element is first information, and wherein apply the policy comprises obtain second information from the first software component.	<p>The Accused Instrumentalities comprise “non-transitory computer-readable storage medium recited in claim 1, wherein the information from the network element is first information, and wherein apply the policy comprises obtain second information from the first software component.”</p> <p><i>See, for example, the disclosures identified for claims 1-6, 8-9, 14, 24, and 25.</i></p>

Claim	Public Documentation
<p>77. The non-transitory computer-readable storage medium recited in claim 1, wherein apply the policy comprises at least assist in intercepting, controlling, blocking, modifying, removing, or replacing a notification associated with the first software component or the service usage activity, the notification for presentation through a user interface of the wireless end-user device.</p>	<p>The Accused Instrumentalities comprise “non-transitory computer-readable storage medium recited in claim 1, wherein apply the policy comprises at least assist in intercepting, controlling, blocking, modifying, removing, or replacing a notification associated with the first software component or the service usage activity, the notification for presentation through a user interface of the wireless end-user device.”</p> <p><i>See</i>, for example, the disclosures identified for claims 1-6, 8-9, 14, 24, and 25.</p> <p>As a further example, the Accused Instrumentalities cause a notification to be presented to a user. <i>See, e.g.</i>, exemplary screenshots:</p>

	<p>; https://source.android.com/docs/core/data/data-saver; https://developer.android.com/training/basics/net-work-ops/data-saver:</p> <p>Check data saver preferences</p> <p>On Android 7.0 (API level 24) and higher, apps can use the <code>ConnectivityManager</code> API to determine what data usage restrictions are being applied. The <code>getRestrictBackgroundStatus()</code> method returns one of the following values:</p> <p><code>RESTRICT_BACKGROUND_STATUS_DISABLED</code></p> <p>Data Saver is disabled.</p> <p><code>RESTRICT_BACKGROUND_STATUS_ENABLED</code></p> <p>The user has enabled Data Saver for this app. Apps should make an effort to limit data usage in the foreground and gracefully handle restrictions to background data usage.</p> <p><code>RESTRICT_BACKGROUND_STATUS_WHITELISTED</code></p> <p>The user has enabled Data Saver but the app is allowed to bypass it. Apps should still make an effort to limit foreground and background data usage.</p> <p>; https://support.apple.com/en-us/HT205234:</p>

Use Low Power Mode to save battery life on your iPhone or iPad

Low Power Mode reduces the amount of power that your iPhone or iPad uses when the battery gets low.

To turn Low Power Mode on or off, go to Settings > Battery. You can also turn Low Power Mode on and off from Control Center. Go to Settings > Control Center > Customize Controls, then select Low Power Mode to add it to Control Center.

When Low Power Mode is on, your iPhone or iPad will last longer before you need to charge it, but some features might take longer to update or complete. Also, some tasks might not work until you turn off Low Power Mode, or until you charge your iPhone or iPad to 80% or higher.

Low Power Mode reduces or affects these features:

- 5G (except for video streaming) on iPhone 12 and iPhone 13 models¹
- Auto-Lock (defaults to 30 seconds)
- Display brightness
- Display refresh rate (limited up to 60 Hz) on iPhone and iPad models with ProMotion display²
- Some visual effects
- iCloud Photos (temporarily paused)
- Automatic downloads
- Email fetch
- Background app refresh

When Low Power Mode is on, the battery in the status bar will be yellow. You'll see a yellow battery icon  and the battery percentage. After you charge your iPhone or iPad to 80% or higher, Low Power Mode automatically turns off.

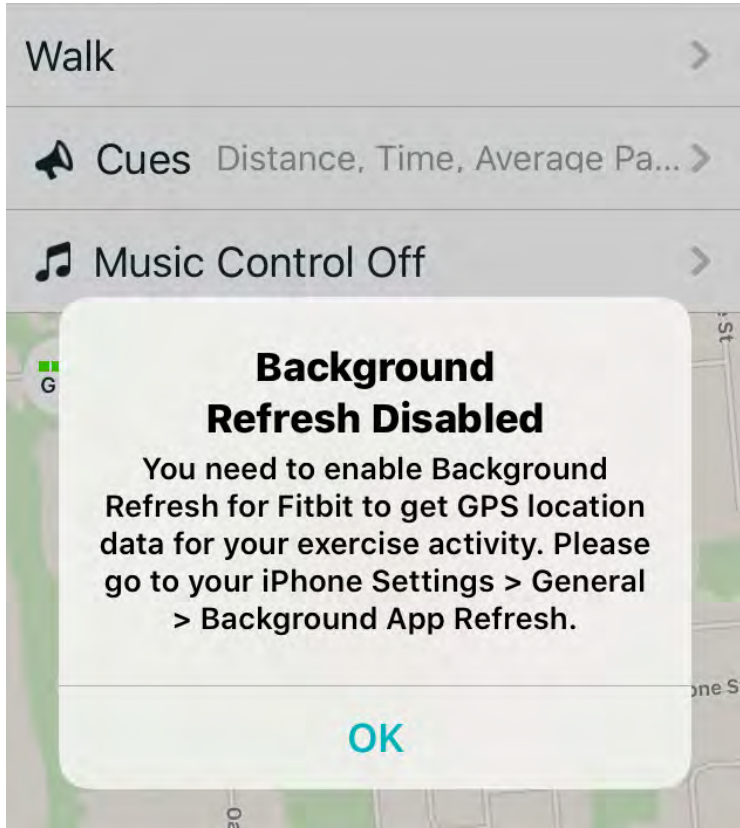

1. If you turn on Low Power Mode, 5G is disabled, except in some cases like video streaming and large downloads on iPhone 12 and iPhone 13 models. With iPhone 12 models, Low Power Mode disables 5G standalone (where available).

2. These devices have ProMotion display: iPhone 13 Pro and later, iPhone 13 Pro Max and later, iPad Pro 10.5-inch, all iPad Pro 11-inch models, and iPad Pro 12.9-inch (2nd generation) and later.

a plurality of access events or attempts associated with the first software component, or time-windowing the number of access events or attempts associated with the first software component.	
89[a] The non-transitory computer-readable storage medium recited in claim 1, wherein, when executed by the one or more processors of the wireless end-user device, the machine-executable instructions further cause the one or more processors to:	<p>The Accused Instrumentalities comprise “non-transitory computer-readable storage medium recited in claim 1, wherein, when executed by the one or more processors of the wireless end-user device, the machine-executable instructions further cause the one or more processors to.”</p> <p><i>See</i>, for example, the disclosures identified for claims 1-6, 8-9, 14, 24, and 25.</p>
89[b] if it is determined that the service usage activity is not the background activity, refrain from applying the policy.	<p>The Accused Instrumentalities further comprise “if it is determined that the service usage activity is not the background activity, refrain from applying the policy.”</p> <p><i>See</i>, for example, the disclosures identified for claims 1-6, 8-9, 14, 24, and 25.</p>
90[a] The non-transitory computer-readable storage medium recited in claim 1, wherein the policy is a first policy, and wherein, when executed by the one or more processors of the wireless end-user device, the machine-executable instructions further cause the one or more processors to:	<p>The Accused Instrumentalities comprise “non-transitory computer-readable storage medium recited in claim 1, wherein the policy is a first policy, and wherein, when executed by the one or more processors of the wireless end-user device, the machine-executable instructions further cause the one or more processors to.”</p> <p><i>See</i>, for example, the disclosures identified for claims 1-6, 8-9, 14, 24, and 25.</p>

Claim	Public Documentation
90[b] if it is determined that the service usage activity is not the background activity, apply a second policy.	<p>The Accused Instrumentalities further comprise “if it is determined that the service usage activity is not the background activity, apply a second policy.”</p> <p><i>See</i>, for example, the disclosures identified for claims 1-6, 8-9, 14, 24, and 25.</p>
91. The non-transitory computer-readable storage medium recited in claim 1, wherein apply the policy comprises cause a notification to be presented through a user interface of the wireless end-user device.	<p>The Accused Instrumentalities further comprise “non-transitory computer-readable storage medium recited in claim 1, wherein apply the policy comprises cause a notification to be presented through a user interface of the wireless end-user device.”</p> <p><i>See</i>, for example, the disclosures identified for claims 1-6, 8-9, 14, 24-25, and 78.</p>
92. The non-transitory computer-readable storage medium recited in claim 91, wherein the notification provides information about the policy.	<p>The Accused Instrumentalities comprise “non-transitory computer-readable storage medium recited in claim 91, wherein the notification provides information about the policy.”</p> <p><i>See</i>, for example, the disclosures identified for claims 1-6, 8-9, 14, 24-25, 78, and 91.</p>
93. The non-transitory computer-readable storage medium recited in claim 91, wherein the notification provides information about an option to set, control, override, or modify the at least an aspect of the policy or a second aspect of the policy.	<p>The Accused Instrumentalities comprise “non-transitory computer-readable storage medium recited in claim 91, wherein the notification provides information about an option to set, control, override, or modify the at least an aspect of the policy or a second aspect of the policy.”</p> <p><i>See</i>, for example, the disclosures identified for claims 1-6, 8-9, 14, 24-25, 78, and 91.</p>
94. The non-transitory computer-readable storage medium recited in claim 91, wherein, when executed by the one or more processors of the wireless end-user	<p>The Accused Instrumentalities comprise “non-transitory computer-readable storage medium recited in claim 91, wherein, when executed by the one or more processors of the wireless end-user device, the machine-executable instructions further cause the one or more processors to obtain an indication of a user response to the notification.”</p>

Claim	Public Documentation
device, the machine-executable instructions further cause the one or more processors to obtain an indication of a user response to the notification.	<i>See</i> , for example, the disclosures identified for claims 1-6, 8-9, 14, 24-25, 78, and 91.
95. The non-transitory computer-readable storage medium recited in claim 91, wherein the notification provides a warning or an alert.	<p>The Accused Instrumentalities comprise “non-transitory computer-readable storage medium recited in claim 91, wherein the notification provides a warning or an alert.”</p> <p><i>See</i>, for example, the disclosures identified for claims 1-6, 8-9, 14, 24-25, 78, and 91.</p>
96. The non-transitory computer-readable storage medium recited in claim 91, wherein the notification provides information about a service plan limit.	<p>The Accused Instrumentalities comprise “non-transitory computer-readable storage medium recited in claim 91, wherein the notification provides information about a service plan limit.”</p> <p><i>See</i>, for example, the disclosures identified for claims 1-6, 8-9, 14, 24-25, 78, and 91.</p>
97. The non-transitory computer-readable storage medium recited in claim 91, wherein the first software component is at least a portion of an application, and wherein the one or more prospective or successful communications over the wireless network comprise an attempt to launch, run, or execute the application, and wherein the notification comprises information about the attempt to launch, run, or execute the application.	<p>The Accused Instrumentalities comprise “non-transitory computer-readable storage medium recited in claim 91, wherein the first software component is at least a portion of an application, and wherein the one or more prospective or successful communications over the wireless network comprise an attempt to launch, run, or execute the application, and wherein the notification comprises information about the attempt to launch, run, or execute the application.”</p> <p><i>See</i>, for example, the disclosures identified for claims 1-6, 8-9, 14, 24-25, 78, and 91.</p>

Claim	Public Documentation
<p>98. The non-transitory computer-readable storage medium recited in claim 91, wherein the one or more prospective or successful communications over the wireless network comprise an attempted or successful launch or execution of the first software component, and wherein the notification comprises information about the attempted or successful launch or execution of the first software component.</p>	<p>The Accused Instrumentalities comprise “non-transitory computer-readable storage medium recited in claim 91, wherein the one or more prospective or successful communications over the wireless network comprise an attempted or successful launch or execution of the first software component, and wherein the notification comprises information about the attempted or successful launch or execution of the first software component.”</p> <p><i>See, for example, the disclosures identified for claims 1-6, 8-9, 14, 24-25, 78, and 91.</i></p>
<p>99. The non-transitory computer-readable storage medium recited in claim 91, wherein the policy is based on a limit, and wherein, when executed by the one or more processors of the wireless end-user device, the machine-executable instructions further cause the one or more processors to determine that a data usage associated with the service usage activity is not less than the limit, and wherein cause a notification to be presented through a user interface of the wireless end-user device comprises trigger presentation of the notification based on the determination that the data usage associated with the service usage activity is not less than the limit.</p>	<p>The Accused Instrumentalities comprise “non-transitory computer-readable storage medium recited in claim 91, wherein the policy is based on a limit, and wherein, when executed by the one or more processors of the wireless end-user device, the machine-executable instructions further cause the one or more processors to determine that a data usage associated with the service usage activity is not less than the limit, and wherein cause a notification to be presented through a user interface of the wireless end-user device comprises trigger presentation of the notification based on the determination that the data usage associated with the service usage activity is not less than the limit.”</p> <p><i>See, for example, the disclosures identified for claims 1-6, 8-9, 14, 24-25, 78, and 91.</i></p>

Claim	Public Documentation
<p>100. The non-transitory computer-readable storage medium recited in claim 91, wherein the one or more prospective or successful communications over the wireless network comprise an attempt to download or load an application, and wherein the notification comprises information about the attempted download or load of the application.</p>	<p>The Accused Instrumentalities comprise “non-transitory computer-readable storage medium recited in claim 91, wherein the one or more prospective or successful communications over the wireless network comprise an attempt to download or load an application, and wherein the notification comprises information about the attempted download or load of the application.”</p> <p><i>See, for example, the disclosures identified for claims 1-6, 8-9, 14, 24-25, 78, and 91.</i></p>
<p>101. The non-transitory computer-readable storage medium recited in claim 91, wherein the one or more prospective or successful communications over the wireless network comprise an attempt to initiate usage of a cloud-based service or application, and wherein the notification comprises information about the attempted initiation of usage of the cloud-based service or application.</p>	<p>The Accused Instrumentalities comprise “non-transitory computer-readable storage medium recited in claim 91, wherein the one or more prospective or successful communications over the wireless network comprise an attempt to initiate usage of a cloud-based service or application, and wherein the notification comprises information about the attempted initiation of usage of the cloud-based service or application.”</p> <p><i>See, for example, the disclosures identified for claims 1-6, 8-9, 14, 24-25, 78, and 91.</i></p>
<p>102. The non-transitory computer-readable storage medium recited in claim 91, wherein the notification indicates that one or more service usage activities are subject to the policy.</p>	<p>The Accused Instrumentalities comprise “non-transitory computer-readable storage medium recited in claim 91, wherein the notification indicates that one or more service usage activities are subject to the policy.”</p> <p><i>See, for example, the disclosures identified for claims 1-6, 8-9, 14, 24-25, 78, and 91.</i></p>

Claim	Public Documentation
103. The non-transitory computer-readable storage medium recited in claim 91, wherein the notification provides information about a second network.	<p>The Accused Instrumentalities comprise “non-transitory computer-readable storage medium recited in claim 91, wherein the notification provides information about a second network.”</p> <p><i>See</i>, for example, the disclosures identified for claims 1-6, 8-9, 14, 24-25, 78, and 91.</p>
104. The non-transitory computer-readable storage medium recited in claim 91, wherein the notification comprises an offer for a service plan upgrade or downgrade.	<p>The Accused Instrumentalities comprise “-transitory computer-readable storage medium recited in claim 91, wherein the notification comprises an offer for a service plan upgrade or downgrade.”</p> <p><i>See</i>, for example, the disclosures identified for claims 1-6, 8-9, 14, 24-25, 78, and 91.</p>
105. The non-transitory computer-readable storage medium recited in claim 91, wherein apply the policy further comprises obtain an indication of a user preference in response to the notification.	<p>The Accused Instrumentalities comprise “non-transitory computer-readable storage medium recited in claim 91, wherein apply the policy further comprises obtain an indication of a user preference in response to the notification.”</p> <p><i>See</i>, for example, the disclosures identified for claims 1-6, 8-9, 14, 24-25, 78, and 91.</p>
106. The non-transitory computer-readable storage medium recited in claim 105, wherein the indication of the user preference comprises a user directive to associate the policy with a second software component.	<p>The Accused Instrumentalities comprise “non-transitory computer-readable storage medium recited in claim 105, wherein the indication of the user preference comprises a user directive to associate the policy with a second software component.”</p> <p><i>See</i>, for example, the disclosures identified for claims 1-6, 8-9, 14, 24-25, 78, 91, and 105.</p>
107. The non-transitory computer-readable storage medium recited in claim 105, wherein the indication of the user preference comprises a user directive to allow or block the service usage activity.	<p>The Accused Instrumentalities comprise “non-transitory computer-readable storage medium recited in claim 105, wherein the indication of the user preference comprises a user directive to allow or block the service usage activity.”</p> <p><i>See</i>, for example, the disclosures identified for claims 1-6, 8-9, 14, 24-25, 78, 91, and 105.</p>

Claim	Public Documentation
<p>108. The non-transitory computer-readable storage medium recited in claim 105, wherein the indication of the user preference identifies a traffic control setting associated with the policy.</p>	<p>The Accused Instrumentalities comprise “non-transitory computer-readable storage medium recited in claim 105, wherein the indication of the user preference identifies a traffic control setting associated with the policy.”</p> <p><i>See</i>, for example, the disclosures identified for claims 1-6, 8-9, 14, 24-25, 78, 91, and 105.</p>
<p>109. The non-transitory computer-readable storage medium recited in claim 105, wherein the indication of the user preference comprises a user directive to allow the service usage activity under a specified condition.</p>	<p>The Accused Instrumentalities comprise “non-transitory computer-readable storage medium recited in claim 105, wherein the indication of the user preference comprises a user directive to allow the service usage activity under a specified condition.”</p> <p><i>See</i>, for example, the disclosures identified for claims 1-6, 8-9, 14, 24-25, 78, 91, and 105.</p>
<p>110. The non-transitory computer-readable storage medium recited in claim 105, wherein the indication of the user preference comprises a user directive to override or modify the policy.</p>	<p>The Accused Instrumentalities comprise “non-transitory computer-readable storage medium recited in claim 105, wherein the indication of the user preference comprises a user directive to override or modify the policy.”</p> <p><i>See</i>, for example, the disclosures identified for claims 1-6, 8-9, 14, 24-25, 78, 91, and 105.</p>
<p>111. The non-transitory computer-readable storage medium recited in claim 91, wherein cause a notification to be presented through a user interface of the wireless end-user device comprises cause the notification to be presented based on occurrence of a trigger.</p>	<p>The Accused Instrumentalities comprise “non-transitory computer-readable storage medium recited in claim 91, wherein cause a notification to be presented through a user interface of the wireless end-user device comprises cause the notification to be presented based on occurrence of a trigger.”</p> <p><i>See</i>, for example, the disclosures identified for claims 1-6, 8-9, 14, 24-25, 78, and 91.</p>

Claim	Public Documentation
<p>112. The non-transitory computer-readable storage medium recited in claim 111, wherein the trigger is: a measure of the service usage activity satisfies a first condition relative to a threshold, an aspect of the service usage activity satisfies a second condition, a change to the policy, or a message from the network element.</p>	<p>The Accused Instrumentalities comprise “non-transitory computer-readable storage medium recited in claim 111, wherein the trigger is: a measure of the service usage activity satisfies a first condition relative to a threshold, an aspect of the service usage activity satisfies a second condition, a change to the policy, or a message from the network element.”</p> <p><i>See, for example, the disclosures identified for claims 1-6, 8-9, 14, 24-25, 78, 91, and 111.</i></p>
<p>113. The non-transitory computer-readable storage medium recited in claim 91, wherein the notification enables a user associated with the wireless end-user device to obtain information about at least an aspect of the service usage activity or a service plan associated with the wireless end-user device.</p>	<p>The Accused Instrumentalities comprise “non-transitory computer-readable storage medium recited in claim 91, wherein the notification enables a user associated with the wireless end-user device to obtain information about at least an aspect of the service usage activity or a service plan associated with the wireless end-user device.”</p> <p><i>See, for example, the disclosures identified for claims 1-6, 8-9, 14, 24-25, and 78.</i></p>
<p>114. The non-transitory computer-readable storage medium recited in claim 91, wherein the notification presents a list of service usage activities or software components, the list of service usage activities or software components including the service usage activity or the first software component.</p>	<p>The Accused Instrumentalities comprise “non-transitory computer-readable storage medium recited in claim 91, wherein the notification presents a list of service usage activities or software components, the list of service usage activities or software components including the service usage activity or the first software component.”</p> <p><i>See, for example, the disclosures identified for claims 1-6, 8-9, 14, 24-25, and 78.</i></p>
<p>115. The non-transitory computer-readable storage medium recited</p>	<p>The Accused Instrumentalities comprise “non-transitory computer-readable storage medium recited in claim 91, wherein the notification presents an option to modify the policy.”</p>

Claim	Public Documentation
in claim 91, wherein the notification presents an option to modify the policy.	<i>See</i> , for example, the disclosures identified for claims 1-6, 8-9, 14, 24-25, and 78.
116. The non-transitory computer-readable storage medium recited in claim 91, wherein the notification presents an indication of a measure of usage of the wireless network associated with the service usage activity.	<p>The Accused Instrumentalities comprise “non-transitory computer-readable storage medium recited in claim 91, wherein the notification presents an indication of a measure of usage of the wireless network associated with the service usage activity.”</p> <p><i>See</i>, for example, the disclosures identified for claims 1-6, 8-9, 14, 24-25, and 78.</p>
117. The non-transitory computer-readable storage medium recited in claim 91, wherein the notification is provided through an e-mail, a text message, a window, a setting, or a voice message.	<p>The Accused Instrumentalities comprise “non-transitory computer-readable storage medium recited in claim 91, wherein the notification is provided through an e-mail, a text message, a window, a setting, or a voice message.”</p> <p><i>See</i>, for example, the disclosures identified for claims 1-6, 8-9, 14, 24-25, and 78.</p>
118[a] The non-transitory computer-readable storage medium recited in claim 1, wherein, when executed by the one or more processors of the wireless end-user device, the machine-executable instructions further cause the one or more processors to:	<p>The Accused Instrumentalities comprise “non-transitory computer-readable storage medium recited in claim 1, wherein, when executed by the one or more processors of the wireless end-user device, the machine-executable instructions further cause the one or more processors to.”</p> <p><i>See</i>, for example, the disclosures identified for claims 1-6, 8-9, 14, 24-25, and 78.</p>
118[b] cause a notification to be presented through a user interface of the wireless end-user device.	<p>The Accused Instrumentalities further “cause a notification to be presented through a user interface of the wireless end-user device.”</p> <p><i>See</i>, for example, the disclosures identified for claims 1-6, 8-9, 14, 24-25, and 78.</p>

Claim	Public Documentation
119. The non-transitory computer-readable storage medium recited in claim 118, wherein the notification provides information about the policy.	<p>The Accused Instrumentalities comprise “non-transitory computer-readable storage medium recited in claim 118, wherein the notification provides information about the policy.”</p> <p><i>See</i>, for example, the disclosures identified for claims 1-6, 8-9, 14, 24-25, 78, 91, and 118.</p>
120. The non-transitory computer-readable storage medium recited in claim 118, wherein the notification provides information about an option to set, control, override, or modify the at least an aspect of the policy or a second aspect of the policy.	<p>The Accused Instrumentalities comprise “non-transitory computer-readable storage medium recited in claim 118, wherein the notification provides information about an option to set, control, override, or modify the at least an aspect of the policy or a second aspect of the policy.”</p> <p><i>See</i>, for example, the disclosures identified for claims 1-6, 8-9, 14, 24-25, 78, 91, and 118.</p>
121. The non-transitory computer-readable storage medium recited in claim 118, wherein the notification indicates that the service usage activity is the background activity.	<p>The Accused Instrumentalities comprise “non-transitory computer-readable storage medium recited in claim 118, wherein the notification indicates that the service usage activity is the background activity.”</p> <p><i>See</i>, for example, the disclosures identified for claims 1-6, 8-9, 14, 24-25, 78, 91, and 118.</p>
122. The non-transitory computer-readable storage medium recited in claim 118, wherein the notification provides information about a second network.	<p>The Accused Instrumentalities comprise “non-transitory computer-readable storage medium recited in claim 118, wherein the notification provides information about a second network.”</p> <p><i>See</i>, for example, the disclosures identified for claims 1-6, 8-9, 14, 24-25, 78, 91, and 118.</p>
123. The non-transitory computer-readable storage medium recited in claim 118, wherein, when executed by the one or more processors of the wireless end-user	<p>The Accused Instrumentalities comprise “non-transitory computer-readable storage medium recited in claim 118, wherein, when executed by the one or more processors of the wireless end-user device, the machine-executable instructions further cause the one or more processors to obtain an indication of a user preference in response to the notification.”</p>

Claim	Public Documentation
device, the machine-executable instructions further cause the one or more processors to obtain an indication of a user preference in response to the notification.	<i>See</i> , for example, the disclosures identified for claims 1-6, 8-9, 14, 24-25, 78, 91, and 118.
124. The non-transitory computer-readable storage medium recited in claim 123, wherein the indication of the user preference comprises a user directive to associate the policy with the first software component.	<p>The Accused Instrumentalities comprise “non-transitory computer-readable storage medium recited in claim 123, wherein the indication of the user preference comprises a user directive to associate the policy with the first software component.”</p> <p><i>See</i>, for example, the disclosures identified for claims 1-6, 8-9, 14, 24-25, 78, 91, 118, and 123.</p>
125. The non-transitory computer-readable storage medium recited in claim 123, wherein the indication of the user preference comprises a user directive to restrict, allow, or block the service usage activity.	<p>The Accused Instrumentalities comprise “non-transitory computer-readable storage medium recited in claim 123, wherein the indication of the user preference comprises a user directive to restrict, allow, or block the service usage activity.”</p> <p><i>See</i>, for example, the disclosures identified for claims 1-6, 8-9, 14, 24-25, 78, 91, 118, and 123.</p>
126. The non-transitory computer-readable storage medium recited in claim 123, wherein the indication of the user preference identifies a traffic control setting associated with the policy.	<p>The Accused Instrumentalities comprise “non-transitory computer-readable storage medium recited in claim 123, wherein the indication of the user preference identifies a traffic control setting associated with the policy.”</p> <p><i>See</i>, for example, the disclosures identified for claims 1-6, 8-9, 14, 24-25, 78, 97, 118, and 123.</p>
127. The non-transitory computer-readable storage medium recited in claim 123, wherein the indication of the user preference comprises a user directive to override or modify the policy.	<p>The Accused Instrumentalities comprise “non-transitory computer-readable storage medium recited in claim 123, wherein the indication of the user preference comprises a user directive to override or modify the policy.”</p> <p><i>See</i>, for example, the disclosures identified for claims 1-6, 8-9, 14, 24-25, 78, 97, 118, and 123.</p>

Claim	Public Documentation
tion of the user preference comprises a user directive to override or modify the policy.	
128. The non-transitory computer-readable storage medium recited in claim 123, wherein the indication of the user preference comprises a user acknowledgment of the notification.	<p>The Accused Instrumentalities comprise “non-transitory computer-readable storage medium recited in claim 123, wherein the indication of the user preference comprises a user acknowledgment of the notification.”</p> <p><i>See</i>, for example, the disclosures identified for claims 1-6, 8-9, 14, 24-25, 78, 97, 118, and 123.</p>
129. The non-transitory computer-readable storage medium recited in claim 123, wherein the indication of the user preference indicates one or more network types.	<p>The Accused Instrumentalities comprise “non-transitory computer-readable storage medium recited in claim 123, wherein the indication of the user preference indicates one or more network types.”</p> <p><i>See</i>, for example, the disclosures identified for claims 1-6, 8-9, 14, 24-25, 78, 97, 118, and 123.</p>
130. The non-transitory computer-readable storage medium recited in claim 129, wherein the one or more network types comprise WiFi, 4G, 3G, wireless, wired, or a combination of these.	<p>The Accused Instrumentalities comprise “non-transitory computer-readable storage medium recited in claim 129, wherein the one or more network types comprise WiFi, 4G, 3G, wireless, wired, or a combination of these.”</p> <p><i>See</i>, for example, the disclosures identified for claims 1-6, 8-9, 14, 24-25, 78, 97, 118, and 123.</p>
131. The non-transitory computer-readable storage medium recited in claim 118, wherein cause a notification to be presented through a user interface of the wireless end-user device comprises cause the notification to be presented based on occurrence of a trigger.	<p>The Accused Instrumentalities comprise “non-transitory computer-readable storage medium recited in claim 118, wherein cause a notification to be presented through a user interface of the wireless end-user device comprises cause the notification to be presented based on occurrence of a trigger.”</p> <p><i>See</i>, for example, the disclosures identified for claims 1-6, 8-9, 14, 24-25, 78, 97, and 118.</p>

Claim	Public Documentation
<p>132. The non-transitory computer-readable storage medium recited in claim 131, wherein the trigger is: a measure of the service usage activity satisfies a first condition relative to a threshold, an aspect of the service usage activity satisfies a second condition, a change to the policy, or a message from the network element.</p>	<p>The Accused Instrumentalities comprise “non-transitory computer-readable storage medium recited in claim 131, wherein the trigger is: a measure of the service usage activity satisfies a first condition relative to a threshold, an aspect of the service usage activity satisfies a second condition, a change to the policy, or a message from the network element.”</p> <p><i>See, for example, the disclosures identified for claims 1-6, 8-9, 14, 24-25, 78, 97, 118, and 131.</i></p>
<p>133. The non-transitory computer-readable storage medium recited in claim 118, wherein the notification enables a user associated with the wireless end-user device to obtain information about at least an aspect of the service usage activity or a service plan associated with the wireless end-user device.</p>	<p>The Accused Instrumentalities comprise “non-transitory computer-readable storage medium recited in claim 118, wherein the notification enables a user associated with the wireless end-user device to obtain information about at least an aspect of the service usage activity or a service plan associated with the wireless end-user device.”</p> <p><i>See, for example, the disclosures identified for claims 1-6, 8-9, 14, 24-25, 78, 97, and 118.</i></p>
<p>134. The non-transitory computer-readable storage medium recited in claim 118, wherein the notification presents a list of service usage activities or software components, the list of service usage activities or software components including the service usage activity or the first software component.</p>	<p>The Accused Instrumentalities comprise “non-transitory computer-readable storage medium recited in claim 118, wherein the notification presents a list of service usage activities or software components, the list of service usage activities or software components including the service usage activity or the first software component.”</p> <p><i>See, for example, the disclosures identified for claims 1-6, 8-9, 14, 24-25, 78, 97, and 118.</i></p>
<p>135. The non-transitory computer-readable storage medium recited</p>	<p>The Accused Instrumentalities comprise “non-transitory computer-readable storage medium recited in claim 118, wherein the notification presents information about a setting associated with the policy.”</p>

Claim	Public Documentation
in claim 118, wherein the notification presents information about a setting associated with the policy.	<i>See</i> , for example, the disclosures identified for claims 1-6, 8-9, 14, 24-25, 78, 97, and 118.
136. The non-transitory computer-readable storage medium recited in claim 118, wherein the notification presents information about the wireless network.	The Accused Instrumentalities comprise “non-transitory computer-readable storage medium recited in claim 118, wherein the notification presents information about the wireless network.” <i>See</i> , for example, the disclosures identified for claims 1-6, 8-9, 14, 24-25, 78, 97, and 118.
137. The non-transitory computer-readable storage medium recited in claim 118, wherein the notification presents an indication of a measure of usage of the wireless network associated with the service usage activity.	The Accused Instrumentalities comprise “non-transitory computer-readable storage medium recited in claim 118, wherein the notification presents information about the wireless network.” <i>See</i> , for example, the disclosures identified for claims 1-6, 8-9, 14, 24-25, 78, 97, and 118.
138. The non-transitory computer-readable storage medium recited in claim 118, wherein the notification presents information about a network busy state or a network availability state.	The Accused Instrumentalities comprise “non-transitory computer-readable storage medium recited in claim 118, wherein the notification presents information about a network busy state or a network availability state.” <i>See</i> , for example, the disclosures identified for claims 1-6, 8-9, 14, 24-25, 78, 97, and 118.
139. The non-transitory computer-readable storage medium recited in claim 118, wherein the notification presents an indication of a measure of usage of the wireless network associated with the first software component.	The Accused Instrumentalities comprise “non-transitory computer-readable storage medium recited in claim 118, wherein the notification presents an indication of a measure of usage of the wireless network associated with the first software component.” <i>See</i> , for example, the disclosures identified for claims 1-6, 8-9, 14, 24-25, 78, 97, and 118.

Claim	Public Documentation
<p>140. The non-transitory computer-readable storage medium recited in claim 118, wherein the notification presents information about a statistic associated with the service usage activity.</p>	<p>The Accused Instrumentalities comprise “non-transitory computer-readable storage medium recited in claim 118, wherein the notification presents information about a statistic associated with the service usage activity.”</p> <p><i>See</i>, for example, the disclosures identified for claims 1-6, 8-9, 14, 24-25, 78, 97, and 118.</p>
<p>141. The non-transitory computer-readable storage medium recited in claim 118, wherein the notification comprises a gauge providing service usage information associated with the service usage activity.</p>	<p>The Accused Instrumentalities comprise “non-transitory computer-readable storage medium recited in claim 118, wherein the notification comprises a gauge providing service usage information associated with the service usage activity.”</p> <p><i>See</i>, for example, the disclosures identified for claims 1-6, 8-9, 14, 24-25, 78, 97, and 118.</p>
<p>142. The non-transitory computer-readable storage medium recited in claim 118, wherein the notification comprises a gauge providing service usage information associated with one or more networks, the one or more networks including the wireless network.</p>	<p>The Accused Instrumentalities comprise “non-transitory computer-readable storage medium recited in claim 118, wherein the notification comprises a gauge providing service usage information associated with one or more networks, the one or more networks including the wireless network.”</p> <p><i>See</i>, for example, the disclosures identified for claims 1-6, 8-9, 14, 24-25, 78, 97, and 118.</p>
<p>143. The non-transitory computer-readable storage medium recited in claim 118, wherein the notification comprises a gauge providing information associated with a service plan.</p>	<p>The Accused Instrumentalities comprise “non-transitory computer-readable storage medium recited in claim 118, wherein the notification comprises a gauge providing information associated with a service plan.”</p> <p><i>See</i>, for example, the disclosures identified for claims 1-6, 8-9, 14, 24-25, 78, 97, and 118.</p>

Claim	Public Documentation
144. The non-transitory computer-readable storage medium recited in claim 118, wherein the notification is provided through an e-mail, a text message, a window, a setting, or a voice message.	<p>The Accused Instrumentalities comprise “non-transitory computer-readable storage medium recited in claim 118, wherein the notification is provided through an e-mail, a text message, a window, a setting, or a voice message.”</p> <p><i>See, for example, the disclosures identified for claims 1-6, 8-9, 14, 24-25, 78, 97, and 118.</i></p>
145. The non-transitory computer-readable storage medium recited in claim 118, wherein the notification comprises a warning or an alert.	<p>The Accused Instrumentalities comprise “non-transitory computer-readable storage medium recited in claim 118, wherein the notification comprises a warning or an alert.”</p> <p><i>See, for example, the disclosures identified for claims 1-6, 8-9, 14, 24-25, 78, 97, and 118.</i></p>
146. The non-transitory computer-readable storage medium recited in claim 118, wherein the information from the network element is first information, and wherein the notification is based on second information from the network element.	<p>The Accused Instrumentalities comprise “non-transitory computer-readable storage medium recited in claim 118, wherein the information from the network element is first information, and wherein the notification is based on second information from the network element.”</p> <p><i>See, for example, the disclosures identified for claims 1-6, 8-9, 14, 24-25, 78, 97, and 118.</i></p>
147. The non-transitory computer-readable storage medium recited in claim 118, wherein the notification comprises information about a cost or a charge associated with the service usage activity.	<p>The Accused Instrumentalities comprise “non-transitory computer-readable storage medium recited in claim 118, wherein the notification comprises information about a cost or a charge associated with the service usage activity.”</p> <p><i>See, for example, the disclosures identified for claims 1-6, 8-9, 14, 24-25, 78, 97, and 118.</i></p>
148. The non-transitory computer-readable storage medium recited	<p>The Accused Instrumentalities comprise “non-transitory computer-readable storage medium recited in claim 118, wherein the notification comprises information about a service sponsor.”</p> <p><i>See, for example, the disclosures identified for claims 1-6, 8-9, 14, 24-25, 78, 97, and 118.</i></p>

Claim	Public Documentation
in claim 118, wherein the notification comprises information about a service sponsor.	
149[a] The non-transitory computer-readable storage medium recited in claim 1, wherein, when executed by the one or more processors of the wireless end-user device, the machine-executable instructions further cause the one or more processors to:	<p>The Accused Instrumentalities comprise “non-transitory computer-readable storage medium recited in claim 1, wherein, when executed by the one or more processors of the wireless end-user device, the machine-executable instructions further cause the one or more processors to.”</p> <p><i>See</i>, for example, the disclosures identified for claims 1-6, 8-9, 14, 24-25, 78, 97, and 118.</p>
149[b] detect an attempted use of the first software component; and	<p>The Accused Instrumentalities further “detect an attempted use of the first software component.”</p> <p><i>See</i>, for example, the disclosures identified for claims 1-6, 8-9, 14, 24-25, 78, 97, and 118.</p>
149[c] based on the detected attempted use of the first software component, cause a notification to be presented through a user interface of the wireless end-user device.	<p>The Accused Instrumentalities “based on the detected attempted use of the first software component, cause a notification to be presented through a user interface of the wireless end-user device.”</p> <p><i>See</i>, for example, the disclosures identified for claims 1-6, 8-9, 14, 24-25, 78, 97, and 118.</p>
150. The non-transitory computer-readable storage medium recited in claim 149, wherein the notification provides information to enable a user associated with the wireless end-user device to override the policy.	<p>The Accused Instrumentalities comprise “non-transitory computer-readable storage medium recited in claim 149, wherein the notification provides information to enable a user associated with the wireless end-user device to override the policy.”</p> <p><i>See</i>, for example, the disclosures identified for claims 1-6, 8-9, 14, 24-25, 78, 97, 118, and 149.</p>

Claim	Public Documentation
<p>151. The non-transitory computer-readable storage medium recited in claim 149, wherein the notification provides information about a cost or a charge associated with the service usage activity.</p>	<p>The Accused Instrumentalities comprise “non-transitory computer-readable storage medium recited in claim 149, wherein the notification provides information about a cost or a charge associated with the service usage activity.”</p> <p><i>See, for example, the disclosures identified for claims 1-6, 8-9, 14, 24-25, 78, 97, 118, and 149.</i></p>
<p>152. The non-transitory computer-readable storage medium recited in claim 149, wherein the notification provides information to enable a user associated with the wireless end-user device to change or upgrade a service plan associated with the wireless end-user device.</p>	<p>The Accused Instrumentalities comprise “non-transitory computer-readable storage medium recited in claim 149, wherein the notification provides information to enable a user associated with the wireless end-user device to change or upgrade a service plan associated with the wireless end-user device.”</p> <p><i>See, for example, the disclosures identified for claims 1-6, 8-9, 14, 24-25, 78, 97, 118, and 149.</i></p>
<p>153. The non-transitory computer-readable storage medium recited in claim 1, wherein the at least an aspect of a policy is based on the user input obtained through the user interface of the wireless end-user device, and wherein the user input specifies a user preference associated with one or more network types.</p>	<p>The Accused Instrumentalities comprise “non-transitory computer-readable storage medium recited in claim 1, wherein the at least an aspect of a policy is based on the user input obtained through the user interface of the wireless end-user device, and wherein the user input specifies a user preference associated with one or more network types.”</p> <p><i>See, for example, the disclosures identified for claims 1-6, 8-9, 14, 24-25, 78, 97, 118, and 149.</i></p>
<p>154. The non-transitory computer-readable storage medium recited in claim 153, wherein the one or more network types comprise wireless fidelity (WiFi), home,</p>	<p>The Accused Instrumentalities comprise “non-transitory computer-readable storage medium recited in claim 153, wherein the one or more network types comprise wireless fidelity (WiFi), home, roaming, 4G, 3G, wireless, wired, or a combination of these.”</p> <p><i>See, for example, the disclosures identified for claims 1-6, 8-9, 14, 24-25, 78, 97, 118, and 149.</i></p>

Claim	Public Documentation
roaming, 4G, 3G, wireless, wired, or a combination of these.	
155. The non-transitory computer-readable storage medium recited in claim 1, wherein the user input obtained through the user interface of the wireless end-user device is a first user input, and wherein the policy is a first policy, and wherein the first user input or a second user input comprises a directive to apply a second policy to a second software component of the plurality of software components on the wireless end-user device.	<p>The Accused Instrumentalities comprise “non-transitory computer-readable storage medium recited in claim 1, wherein the user input obtained through the user interface of the wireless end-user device is a first user input, and wherein the policy is a first policy, and wherein the first user input or a second user input comprises a directive to apply a second policy to a second software component of the plurality of software components on the wireless end-user device.”</p> <p><i>See, for example, the disclosures identified for claims 1-6, 8-9, 14, 24-25, and 78.</i></p>
156. The non-transitory computer-readable storage medium recited in claim 1, wherein the user input obtained through the user interface of the wireless end-user device is a first user input, and wherein the first user input or a second user input comprises a directive to refrain from applying the policy to a second software component of the plurality of software components on the wireless end-user device.	<p>The Accused Instrumentalities comprise “non-transitory computer-readable storage medium recited in claim 1, wherein the user input obtained through the user interface of the wireless end-user device is a first user input, and wherein the first user input or a second user input comprises a directive to refrain from applying the policy to a second software component of the plurality of software components on the wireless end-user device.”</p> <p><i>See, for example, the disclosures identified for claims 1-6, 8-9, 14, 24, 25, and 78.</i></p>

Claim	Public Documentation
<p>157. The non-transitory computer-readable storage medium recited in claim 1, wherein the user input obtained through the user interface of the wireless end-user device comprises a directive to apply the policy to a second software component of the plurality of software components on the wireless end-user device.</p>	<p>The Accused Instrumentalities comprise “non-transitory computer-readable storage medium recited in claim 1, wherein the user input obtained through the user interface of the wireless end-user device comprises a directive to apply the policy to a second software component of the plurality of software components on the wireless end-user device.”</p> <p><i>See, for example, the disclosures identified for claims 1-6, 8-9, 14, 24, 25, and 78.</i></p>
<p>158. The non-transitory computer-readable storage medium recited in claim 1, wherein the user input obtained through the user interface of the wireless end-user device specifies a user preference associated with the service usage activity or the first software component.</p>	<p>The Accused Instrumentalities comprise “non-transitory computer-readable storage medium recited in claim 1, wherein the user input obtained through the user interface of the wireless end-user device specifies a user preference associated with the service usage activity or the first software component.”</p> <p><i>See, for example, the disclosures identified for claims 1-6, 8-9, 14, 24, 25, and 78.</i></p>
<p>159. The non-transitory computer-readable storage medium recited in claim 158, wherein the user preference comprises a preference to restrict, allow, block, delay, or throttle the service usage activity.</p>	<p>The Accused Instrumentalities comprise “non-transitory computer-readable storage medium recited in claim 158, wherein the user preference comprises a preference to restrict, allow, block, delay, or throttle the service usage activity.”</p> <p><i>See, for example, the disclosures identified for claims 1-6, 8-9, 14, 24, 25, and 78.</i></p>
<p>160[a] The non-transitory computer-readable storage medium recited in claim 1, wherein the service usage activity is a first service usage activity, and wherein</p>	<p>The Accused Instrumentalities comprise “non-transitory computer-readable storage medium recited in claim 1, wherein the service usage activity is a first service usage activity, and wherein the wireless network is a first wireless network, and wherein, when executed by the one or more processors of the wireless end-user device, the machine-executable instructions further cause the one or more processors to.”</p>

Claim	Public Documentation
the wireless network is a first wireless network, and wherein, when executed by the one or more processors of the wireless end-user device, the machine-executable instructions further cause the one or more processors to:	<i>See</i> , for example, the disclosures identified for claims 1-6, 8-9, 14, 24, 25, and 78.
160[b] identify a second service usage activity of the wireless end-user device, the second service usage activity being associated with the first software component or with a second software component of the plurality of software components on the wireless end-user device, the second service usage activity comprising one or more prospective or successful communications over a second wireless network; and	<p>The Accused Instrumentalities further “identify a second service usage activity of the wireless end-user device, the second service usage activity being associated with the first software component or with a second software component of the plurality of software components on the wireless end-user device, the second service usage activity comprising one or more prospective or successful communications over a second wireless network.”</p> <p><i>See</i>, for example, the disclosures identified for claims 1-6, 8-9, 14, 24, 25, and 78.</p>
160[c] refrain from applying the policy to the second service usage activity.	<p>The Accused Instrumentalities further “refrain from applying the policy to the second service usage activity.”</p> <p><i>See</i>, for example, the disclosures identified for claims 1-6, 8-9, 14, 24, 25, and 78.</p>
161[a] The non-transitory computer-readable storage medium recited in claim 1, wherein the service usage activity is a first service usage activity, and wherein the background activity is a first background activity, and wherein	<p>The Accused Instrumentalities comprise “non-transitory computer-readable storage medium recited in claim 1, wherein the service usage activity is a first service usage activity, and wherein the background activity is a first background activity, and wherein the wireless network is a first wireless network, and wherein the policy is a first policy, and wherein, when executed by the one or more processors of the wireless end-user device, the machine-executable instructions further cause the one or more processors to.”</p> <p><i>See</i>, for example, the disclosures identified for claims 1-6, 8-9, 14, 24, 25, and 78.</p>

Claim	Public Documentation
<p>the wireless network is a first wireless network, and wherein the policy is a first policy, and wherein, when executed by the one or more processors of the wireless end-user device, the machine-executable instructions further cause the one or more processors to:</p>	
<p>161[b] identify a second service usage activity of the wireless end-user device, the second service usage activity being associated with the first software component or with a second software component of the plurality of software components on the wireless end-user device, the second service usage activity comprising one or more prospective or successful communications over a second wireless network; and</p>	<p>The Accused Instrumentalities further “identify a second service usage activity of the wireless end-user device, the second service usage activity being associated with the first software component or with a second software component of the plurality of software components on the wireless end-user device, the second service usage activity comprising one or more prospective or successful communications over a second wireless network.”</p> <p><i>See, for example, the disclosures identified for claims 1-6, 8-9, 14, 24, 25, and 78.</i></p>
<p>161[c] determine whether the second service usage activity is a second background activity;</p>	<p>The Accused Instrumentalities further “determine whether the second service usage activity is a second background activity.”</p> <p><i>See, for example, the disclosures identified for claims 1-6, 8-9, 14, 24, 25, and 78.</i></p>
<p>161[d] if it is determined that the second service usage activity is the second background activity,</p>	<p>The Accused Instrumentalities “if it is determined that the second service usage activity is the second background activity, apply a second policy to the second service usage activity.”</p> <p><i>See, for example, the disclosures identified for claims 1-6, 8-9, 14, 24, 25, and 78.</i></p>

Claim	Public Documentation
apply a second policy to the second service usage activity.	
162. The non-transitory computer-readable storage medium recited in claim 161, wherein the first policy restricts or prevents the first background activity, and wherein the second policy allows the second background activity.	<p>The Accused Instrumentalities comprise “non-transitory computer-readable storage medium recited in claim 161, wherein the first policy restricts or prevents the first background activity, and wherein the second policy allows the second background activity.”</p> <p><i>See, for example, the disclosures identified for claims 1-6, 8-9, 14, 24, 25, and 78.</i></p>
163[a] The non-transitory computer-readable storage medium recited in claim 1, wherein the service usage activity is a first service usage activity, and wherein the wireless network is a first wireless network, and wherein the policy is a first policy, and wherein, when executed by the one or more processors of the wireless end-user device, the machine-executable instructions further cause the one or more processors to:	<p>The Accused Instrumentalities comprise “non-transitory computer-readable storage medium recited in claim 1, wherein the service usage activity is a first service usage activity, and wherein the wireless network is a first wireless network, and wherein the policy is a first policy, and wherein, when executed by the one or more processors of the wireless end-user device, the machine-executable instructions further cause the one or more processors to.”</p> <p><i>See, for example, the disclosures identified for claims 1-6, 8-9, 14, 24, 25, and 78.</i></p>
163[b] identify a second service usage activity of the wireless end-user device, the second service usage activity being associated with the first software component or with a second software component	<p>The Accused Instrumentalities further “identify a second service usage activity of the wireless end-user device, the second service usage activity being associated with the first software component or with a second software component of the plurality of software components on the wireless end-user device, the second service usage activity comprising one or more prospective or successful communications over a second wireless network.”</p> <p><i>See, for example, the disclosures identified for claims 1-6, 8-9, 14, 24, 25, and 78.</i></p>

Claim	Public Documentation
of the plurality of software components on the wireless end-user device, the second service usage activity comprising one or more prospective or successful communications over a second wireless network; and	
163[c] apply a second policy to the second service usage activity.	<p>The Accused Instrumentalities further “apply a second policy to the second service usage activity.”</p> <p><i>See</i>, for example, the disclosures identified for claims 1-6, 8-9, 14, 24, 25, and 78.</p>
164. The non-transitory computer-readable storage medium recited in claim 163, wherein the second policy comprises a control policy, a notification policy, or an accounting policy associated with the first software component or the second software component.	<p>The Accused Instrumentalities comprise “non-transitory computer-readable storage medium recited in claim 163, wherein the second policy comprises a control policy, a notification policy, or an accounting policy associated with the first software component or the second software component.”</p> <p><i>See</i>, for example, the disclosures identified for claims 1-6, 8-9, 14, 24, 25, and 78.</p>
165[a] The non-transitory computer-readable storage medium recited in claim 1, wherein the service usage activity is a first service usage activity, and wherein the one or more prospective or successful communications over the wireless network are first one or more prospective or successful communications over the first wireless network, and wherein the	<p>The Accused Instrumentalities comprise “non-transitory computer-readable storage medium recited in claim 1, wherein the service usage activity is a first service usage activity, and wherein the one or more prospective or successful communications over the wireless network are first one or more prospective or successful communications over the first wireless network, and wherein the background activity is a first background activity, and wherein the user input obtained through the user interface of the wireless end-user device is a first user input, and wherein, when executed by the one or more processors of the wireless end-user device, the machine-executable instructions further cause the one or more processors to.”</p> <p><i>See</i>, for example, the disclosures identified for claims 1-6, 8-9, 14, 24, 25, and 78.</p>

Claim	Public Documentation
background activity is a first background activity, and wherein the user input obtained through the user interface of the wireless end-user device is a first user input, and wherein, when executed by the one or more processors of the wireless end-user device, the machine-executable instructions further cause the one or more processors to:	
165[b] identify a second service usage activity of the wireless end-user device, the second service usage activity being associated with a second software component of the plurality of software components on the wireless end-user device, the second service usage activity comprising second one or more prospective or successful communications over the wireless network;	<p>The Accused Instrumentalities further “identify a second service usage activity of the wireless end-user device, the second service usage activity being associated with a second software component of the plurality of software components on the wireless end-user device, the second service usage activity comprising second one or more prospective or successful communications over the wireless network.”</p> <p><i>See, for example, the disclosures identified for claims 1-6, 8-9, 14, 24, 25, and 78.</i></p>
165[c] determine whether the second service usage activity is a second background activity; and	<p>The Accused Instrumentalities further “determine whether the second service usage activity is a second background activity.”</p> <p><i>See, for example, the disclosures identified for claims 1-6, 8-9, 14, 24, 25, and 78.</i></p>
165[d] if it is determined that the second service usage activity is the second background activity,	The Accused Instrumentalities “if it is determined that the second service usage activity is the second background activity, apply at least a portion of the policy, wherein the at least a portion of the policy is based on a second user input.”

Claim	Public Documentation
<p>apply at least a portion of the policy, wherein the at least a portion of the policy is based on a second user input.</p>	<p><i>See</i>, for example, the disclosures identified for claims 1-6, 8-9, 14, 24, 25, and 78.</p>
<p>166[a] The non-transitory computer-readable storage medium recited in claim 1, wherein the service usage activity is a first service usage activity, and wherein the one or more prospective or successful communications over the wireless network are first one or more prospective or successful communications over the wireless network, and wherein, when executed by the one or more processors of the wireless end-user device, the machine-executable instructions further cause the one or more processors to:</p>	<p>The Accused Instrumentalities comprise “non-transitory computer-readable storage medium recited in claim 1, wherein the service usage activity is a first service usage activity, and wherein the one or more prospective or successful communications over the wireless network are first one or more prospective or successful communications over the wireless network, and wherein, when executed by the one or more processors of the wireless end-user device, the machine-executable instructions further cause the one or more processors to.”</p> <p><i>See</i>, for example, the disclosures identified for claims 1-6, 8-9, 14, 24, 25, and 78.</p>
<p>166[b] identify a second service usage activity of the wireless end-user device, the second service usage activity being associated with a second software component of the plurality of software components on the wireless end-user device, the second service usage activity comprising second one or more prospective or successful</p>	<p>The Accused Instrumentalities further “identify a second service usage activity of the wireless end-user device, the second service usage activity being associated with a second software component of the plurality of software components on the wireless end-user device, the second service usage activity comprising second one or more prospective or successful communications over the wireless network.”</p> <p><i>See</i>, for example, the disclosures identified for claims 1-6, 8-9, 14, 24, 25, and 78.</p>

Claim	Public Documentation
communications over the wireless network;	
166[c] determine whether the second service usage activity is the background activity; and	<p>The Accused Instrumentalities further “determine whether the second service usage activity is the background activity.”</p> <p><i>See</i>, for example, the disclosures identified for claims 1-6, 8-9, 14, 24, 25, and 78.</p>
166[d] if it is determined that the second service usage activity is the background activity, refrain from applying at least a portion of the policy.	<p>The Accused Instrumentalities “if it is determined that the second service usage activity is the background activity, refrain from applying at least a portion of the policy.”</p> <p><i>See</i>, for example, the disclosures identified for claims 1-6, 8-9, 14, 24, 25, and 78.</p>
167[a] The non-transitory computer-readable storage medium recited in claim 1, wherein the background activity is a first background activity, and wherein the service usage activity is a first service usage activity, and wherein the one or more prospective or successful communications over the wireless network are first one or more prospective or successful communications over the wireless network, and wherein the policy is a first policy, and wherein, when executed by the one or more processors of the wireless end-user device, the machine-executable instructions further cause the one or more processors to:	<p>The Accused Instrumentalities comprise “non-transitory computer-readable storage medium recited in claim 1, wherein the background activity is a first background activity, and wherein the service usage activity is a first service usage activity, and wherein the one or more prospective or successful communications over the wireless network are first one or more prospective or successful communications over the wireless network, and wherein the policy is a first policy, and wherein, when executed by the one or more processors of the wireless end-user device, the machine-executable instructions further cause the one or more processors to.”</p> <p><i>See</i>, for example, the disclosures identified for claims 1-6, 8-9, 14, 24, 25, and 78.</p>

Claim	Public Documentation
<p>167[b] identify a second service usage activity of the wireless end-user device, the second service usage activity being associated with a second software component of the plurality of software components on the wireless end-user device, the second service usage activity comprising second one or more prospective or successful communications over the wireless network;</p>	<p>The Accused Instrumentalities further “identify a second service usage activity of the wireless end-user device, the second service usage activity being associated with a second software component of the plurality of software components on the wireless end-user device, the second service usage activity comprising second one or more prospective or successful communications over the wireless network.”</p> <p><i>See, for example, the disclosures identified for claims 1-6, 8-9, 14, 24, 25, and 78.</i></p>
<p>167[c] determine whether the second service usage activity is a second background activity;</p>	<p>The Accused Instrumentalities further “determine whether the second service usage activity is a second background activity.”</p> <p><i>See, for example, the disclosures identified for claims 1-6, 8-9, 14, 24, 25, and 78.</i></p>
<p>167[d] obtain a second policy, the second policy to be applied when the second service usage activity is the second background activity, the second policy for controlling the second service usage activity; and</p>	<p>The Accused Instrumentalities further “obtain a second policy, the second policy to be applied when the second service usage activity is the second background activity, the second policy for controlling the second service usage activity.”</p> <p><i>See, for example, the disclosures identified for claims 1-6, 8-9, 14, 24, 25, and 78.</i></p>
<p>167[e] if it is determined that the second service usage activity is the second background activity, apply the second policy.</p>	<p>The Accused Instrumentalities “if it is determined that the second service usage activity is the second background activity, apply the second policy.”</p> <p><i>See, for example, the disclosures identified for claims 1-6, 8-9, 14, 24, 25, and 78.</i></p>

Claim	Public Documentation
<p>168. The non-transitory computer-readable storage medium recited in claim 167, wherein the first policy, the second policy, or both are based on a network busy state, a network availability state, or a cost associated with the wireless network.</p>	<p>The Accused Instrumentalities comprise “non-transitory computer-readable storage medium recited in claim 167, wherein the first policy, the second policy, or both are based on a network busy state, a network availability state, or a cost associated with the wireless network.”</p> <p><i>See, for example, the disclosures identified for claims 1-6, 8-9, 14, 24, 25, and 78.</i></p>
<p>169[a] The non-transitory computer-readable storage medium recited in claim 1, wherein the service usage activity is a first service usage activity, and wherein the one or more prospective or successful communications over the wireless network are first one or more prospective or successful communications over the wireless network, and wherein, when executed by the one or more processors of the wireless end-user device, the machine-executable instructions further cause the one or more processors to:</p>	<p>The Accused Instrumentalities comprise “non-transitory computer-readable storage medium recited in claim 1, wherein the service usage activity is a first service usage activity, and wherein the one or more prospective or successful communications over the wireless network are first one or more prospective or successful communications over the wireless network, and wherein, when executed by the one or more processors of the wireless end-user device, the machine-executable instructions further cause the one or more processors to.”</p> <p><i>See, for example, the disclosures identified for claims 1-6, 8-9, 14, 24, 25, and 78.</i></p>
<p>169[b] identify a second service usage activity of the wireless end-user device, the second service usage activity being associated with the first software component, the second service usage activity com-</p>	<p>The Accused Instrumentalities comprise “identify a second service usage activity of the wireless end-user device, the second service usage activity being associated with the first software component, the second service usage activity comprising second one or more prospective or successful communications over the wireless network.”</p> <p><i>See, for example, the disclosures identified for claims 1-6, 8-9, 14, 24, 25, and 78.</i></p>

Claim	Public Documentation
prising second one or more prospective or successful communications over the wireless network;	
169[c] determine whether the second service usage activity is the background activity; and	<p>The Accused Instrumentalities comprise “determine whether the second service usage activity is the background activity.”</p> <p><i>See</i>, for example, the disclosures identified for claims 1-6, 8-9, 14, 24, 25, and 78.</p>
169[d] if it is determined that the second service usage activity is the background activity, apply at least a portion of the policy.	<p>The Accused Instrumentalities comprise “if it is determined that the second service usage activity is the background activity, apply at least a portion of the policy.”</p> <p><i>See</i>, for example, the disclosures identified for claims 1-6, 8-9, 14, 24, 25, and 78.</p>
170. The non-transitory computer-readable storage medium recited in claim 1, wherein, when executed by the one or more processors of the wireless end-user device, the machine-executable instructions further cause the one or more processors to monitor the service usage activity, account for the service usage activity, report information about the service usage activity, or a combination of these.	<p>The Accused Instrumentalities comprise “non-transitory computer-readable storage medium recited in claim 1, wherein, when executed by the one or more processors of the wireless end-user device, the machine-executable instructions further cause the one or more processors to monitor the service usage activity, account for the service usage activity, report information about the service usage activity, or a combination of these.”</p> <p><i>See</i>, for example, the disclosures identified for claims 1-6, 8-9, 14, 24, 25, and 78.</p> <p>As a further example, the Accused Instrumentalities monitor, account for, and/or report information about service usage activities. <i>See, e.g.</i>, https://support.apple.com/en-us/HT201299:</p>

View how much data you're using

To see how much cellular data you've used, go to Settings > Cellular or Settings > Mobile Data. If you're using an iPad, you might see Settings > Cellular Data instead.

- Scroll down to find which apps are using cellular data. If you don't want an app to use cellular data, you can turn it off for that app. When cellular data is off, apps will use only Wi-Fi for data.
- To see the cellular data usage for individual System Services, go to Settings > Cellular or Settings > Mobile Data. Then tap System Services, in the list under Cellular Data. Cellular data can't be turned on or off for individual System Services.
- You can view the data-usage statistics for an app from a current period, or view app data statistics for apps that use data when you were roaming. To reset these statistics, go to Settings > Cellular or Settings > Mobile Data, and tap Reset Statistics.
- When you're using an iPhone with Dual SIM, you can see how much cellular data you've used with your selected cellular data number.

To get the most accurate cellular data usage from a current period, contact your carrier.

Claim	Public Documentation
171. The wireless end-user device embodying the non-transitory computer-readable storage medium recited in claim 1.	<p>The Accused Instrumentalities “embody[] the non-transitory computer-readable storage medium recited in claim 1.”</p> <p><i>See</i>, for example, the disclosures identified for claim 1.</p>
172. The non-transitory computer-readable storage medium recited in claim 1, wherein the network element comprises a service controller, a server, a cloud element, or a billing element.	<p>The Accused Instrumentalities comprise “non-transitory computer-readable storage medium recited in claim 1, wherein the network element comprises a service controller, a server, a cloud element, or a billing element.”</p> <p><i>See</i>, for example, the disclosures identified for claims 1-6, 8-9, 14, 24, 25, and 78.</p>
173. The non-transitory computer-readable storage medium recited in claim 1, wherein, when executed by the one or more processors of the wireless end-user device, the machine-executable instructions further cause the one or more processors to provide information about the service usage activity to the network element.	<p>The Accused Instrumentalities comprise “non-transitory computer-readable storage medium recited in claim 1, wherein, when executed by the one or more processors of the wireless end-user device, the machine-executable instructions further cause the one or more processors to provide information about the service usage activity to the network element.”</p> <p><i>See</i>, for example, the disclosures identified for claims 1-6, 8-9, 14, 24, 25, and 78.</p>
174[a] The non-transitory computer-readable storage medium recited in claim 173, wherein the information about the service usage activity comprises a count of data traffic associated with the service usage activity, a transaction	<p>The Accused Instrumentalities comprise “non-transitory computer-readable storage medium recited in claim 173, wherein the information about the service usage activity comprises a count of data traffic associated with the service usage activity, a transaction count, a message count, a connection time, a connection duration, a classification of traffic, an indication that a measure of the service usage activity satisfies a condition relative to a threshold, a parameter associated with the service usage activity, an indication that the background activity is restricted, or a combination of these.”</p>

Claim	Public Documentation
count, a message count, a connection time, a connection duration, a classification of traffic, an indication that a measure of the service usage activity satisfies a condition relative to a threshold, a parameter associated with the service usage activity, an indication that the background activity is restricted, or a combination of these.	<i>See</i> , for example, the disclosures identified for claims 1-6, 8-9, 14, 24, 25, 78, and 173.
174[b] identify a second service usage activity of the wireless end-user device, the second service usage activity being associated with the first software component, the second service usage activity comprising second one or more prospective or successful communications over the wireless network;	<p>The Accused Instrumentalities further “identify a second service usage activity of the wireless end-user device, the second service usage activity being associated with the first software component, the second service usage activity comprising second one or more prospective or successful communications over the wireless network.”</p> <p><i>See</i>, for example, the disclosures identified for claims 1-6, 8-9, 14, 24, 25, 78, and 173.</p>
174[c] determine whether the second service usage activity is the background activity; and	<p>The Accused Instrumentalities further “determine whether the second service usage activity is the background activity.”</p> <p><i>See</i>, for example, the disclosures identified for claims 1-6, 8-9, 14, 24, 25, 78, and 173.</p>
174[d] if it is determined that the second service usage activity is the background activity, apply at least a portion of the policy.	<p>The Accused Instrumentalities “if it is determined that the second service usage activity is the background activity, apply at least a portion of the policy.”</p> <p><i>See</i>, for example, the disclosures identified for claims 1-6, 8-9, 14, 24, 25, 78, and 173.</p>

Exhibit 3 - U.S. Patent No. 8,924,543 (“’543 Patent”)

Accused Instrumentalities: smartphones, basic phones, tablets, laptops, and hotspot devices sold (including those sold in bundles with data plans) or used by T-Mobile for use with T-Mobile’s wireless network services, and all versions and variations thereof since the issuance of the asserted patent.

Claim 1

Issued Claim(s)	Public Documentation
1[a] A network service plan provisioning system communicatively coupled to a wireless end-user device over a wireless access network, the network service plan provisioning system comprising one or more network elements configured to:	<p>To the extent the preamble is limiting, T-Mobile’s Accused Instrumentalities comprise a network service plan provisioning system communicatively coupled to wireless end-user devices over a wireless access network, with the wireless access network comprising one or more network elements.</p> <p>T-Mobile offers telecommunications service plans to customers that are provided through various network elements such as telecommunications base stations and cell sites, edge servers, and other telecommunications servers. T-Mobile provides various network service plans to customers for purchase, including through the T-Mobile.com website as well as through T-Mobile-provided services such as its pre-paid mobile service category, T-Mobile Prepaid Unlimited. <i>See, e.g.:</i></p>

<https://www.t-mobile.com/cell-phone-plans>

T-Mobile sells mobile devices such as phones, tablets, and hotspot access points which communicate with the T-Mobile wireless service network, which is a wireless access network. Such devices comprise end-user devices, as do devices which customers purchase elsewhere and “bring” to the T-Mobile network. *See, e.g.:*

Add to a prepaid plan

To purchase a pass on your prepaid plan, call T-Mobile customer service [1-877-746-0909](tel:1-877-746-0909) for assistance.

- You can get a 1-day pass or a 1-week (7-day) pass.
- Automated account help and customer service representatives are available 24 hours a day, 7 days a week.
- For the hearing impaired, TTY service is available by calling [1-877-296-1018](tel:1-877-296-1018), 7 days a week, from 3 a.m.-10 p.m. PT.

Add to a prepaid Mobile Internet (MI) plan

- Prepaid Mobile Internet (MI) plans provide data service on devices such as laptop sticks, tablets, and mobile hotspots.
- To add prepaid Mobile Internet, [log in to your T-Mobile.com](#) account.

Add to a T-Mobile Internet Lite plan

To purchase a pass on your Internet Lite plan, contact us at [1-800-866-2453](tel:1-800-866-2453) for assistance.

- If you have a 300 GB Internet Lite plan, you can purchase a 10 GB Internet Lite Data Pass (\$10 per line) or 25 GB Internet Lite Data Pass (\$20 per line)
- You will receive a message to your gateway and an email (if you have an email address on file) at 80%, 95%, and 100% consumption of the Lite Data Pass.
- If you need to add a Lite Data Pass to supplement your data each month, you may benefit from a higher data plan. Use the [Internet Data Estimator](#) to get a recommendation for the best Internet Lite plan for you.
- Check out [T-Mobile Internet Lite](#) for more information about how to check your data and manage your plan.
- If you have a T-Mobile Backup Internet plan and need additional data, contact us at [1-800-866-2453](tel:1-800-866-2453) to review your options.

<https://www.t-mobile.com/support/plans-features/data-passes#prepaid>

Activation steps

If you don't have a plan that includes HD streaming, refer to [Find the right plan for you](#) to add a plan today.

From the T-Mobile app

1. Open the T-Mobile app. If you don't have it, [learn how to download it now](#).
2. Tap **MORE**.
3. Go to **PROFILE SETTINGS**.
4. Go to **MEDIA SETTINGS**.
5. If you have multiple lines on your account, make sure the line you're making changes to is showing. If it's not, open the menu to select another line or account.
6. Next to **HD Video Resolution**, toggle it **ON** or **OFF**.

From T-Mobile.com

1. [Log in to T-Mobile.com](#) with your T-Mobile ID. If you don't have one, [register for a T-Mobile ID](#).
2. Select **PROFILE**.
3. Go to **MEDIA SETTINGS**.
4. By **HD Video Resolution**, set the option to **ON** or **OFF**.

HD video resolution details

- Activating HD video resolution only provides the ability to enable higher-resolution video streams by turning off video optimization. It doesn't change the actual, available resolution of streaming video.
- Video resolution isn't determined by T-Mobile, but rather it's determined by the video content provider like YouTube or Netflix.
- Once you turn it on, HD video streaming availability should take effect immediately, but it may require closing and re-opening the app or browser window, or restarting your device.

Full terms

All on-network data used, including free streaming data, counts toward the heavy-user threshold of 50GB in a billing cycle, after which a T-Mobile-branded customer will no longer receive highest priority on the network. When an HD video is active, streaming high-definition video will use data much faster than optimized video, and brings up to the possibility of de-prioritization if you use enough data to reach that limit in a given month. (Learn more about T-Mobile [Open Internet](#) disclosures.)

<https://www.t-mobile.com/support/plans-features/activate-hd-video-streaming>

	<p>Unlimited video streaming with Binge On™</p> <p>As a Simple Choice™ customer, you can stream all the video you want while on our network. Data charges do not apply.</p> <p>During congestion, heavy data users (>50GB/mo. for most plans) and customers choosing lower-prioritized plans may notice lower speeds than other customers.</p> <p>https://www.t-mobile.com/tv-streaming/binge-on</p> <p>To provide the best possible experience for the most possible customers on their T-Mobile-branded plans, and to minimize capacity issues and degradation in network performance, we manage significant high-speed data usage on the vast majority of our plans through prioritization. Heavy Data Users (as defined by a customer's rate plan) will have their data usage prioritized below the data usage (including tethering) of other customers at times and at locations where there are competing customer demands for network resources, which may result in slower data speeds. At the start of the next bill cycle, the customer's usage status is reset, and this data traffic is no longer prioritized below other traffic. Customers who use data in violation of their Rate Plan terms or T-Mobile's Terms and Conditions may be excluded from this calculation. Data features that may not count against the high-speed data allotment for some plans, such as certain data associated with Music Freedom, or Binge On, still count towards all customers' usage for this calculation. Smartphone Mobile HotSpot (tethering) data is also included in this calculation. Data used for customer service applications, such as the T-Mobile My Account app does not count towards customers' usage for this calculation. To help avoid application of this practice, and reduce mobile data consumption, customers can set automatic updating of apps, podcasts and file downloads to run off Wi-Fi (making sure to connect to Wi-Fi to update applications and system periodically).</p> <p>https://www.t-mobile.com/responsibility/consumer-info/policies/internet-service</p>
<p>1[c] the first service plan component comprising (1) information specifying a first traffic classification filter for filtering a traffic event in a network traffic inspection system, the traffic event being associated with the wireless end-user device and (2) a first network policy</p>	<p>The Accused Instrumentalities have “first service plan component[s]” “comprising (1) information specifying a first traffic classification filter for filtering a traffic event in a network traffic inspection system, the traffic event being associated with the wireless end-user device and (2) a first network policy enforcement action that is triggered in a network policy enforcement system when the traffic event possesses a characteristic that matches the first traffic classification filter.”</p>

enforcement action that is triggered in a network policy enforcement system when the traffic event possesses a characteristic that matches the first traffic classification filter, and

1[d] the second service plan component comprising (a) information specifying a second traffic classification filter for filtering the traffic event in the network traffic inspection system, and (b) a second network policy enforcement action that is triggered in the network policy enforcement system when the traffic event possesses a characteristic that matches the second traffic classification filter;

Examples of such first service plan components include, for example, special video streaming plans or options (e.g., T-Mobile HD Streaming, <https://www.t-mobile.com/support/plans-features/activate-hd-video-streaming/>), hotspot data plans, and special network access rules for user devices when the devices attempt to purchase additional data from T-Mobile. *See, e.g.:*

Activation steps

If you don't have a plan that includes HD streaming, refer to [Find the right plan for you](#) to add a plan today.

Unlimited video streaming with Binge On™

As a Simple Choice™ customer, you can stream all the video you want while on our network. Data charges do not apply.

During congestion, heavy data users (>50GB/mo. for most plans) and customers choosing lower-prioritized plans may notice lower speeds than other customers.

<https://www.t-mobile.com/tv-streaming/binge-on>

The screenshot displays the T-Mobile website's 'Plans support' section. At the top, there is a navigation bar with the T-Mobile logo and links for 'Plans', 'Phones & devices', 'Deals', 'Coverage', and 'Join Us'. A secondary navigation bar includes 'Support', 'Get started', 'Account resources', 'Network & roaming', 'Plans support' (which is highlighted), 'Device assistance', and 'Business support'. The main content area is titled 'Add to a prepaid plan' and provides instructions on how to purchase a pass for a prepaid plan by calling 1-877-746-0909. It lists three bullet points: getting a 1-day or 1-week pass, 24-hour automated help, and TTY service for the hearing impaired. Below this is a section for 'Add to a prepaid Mobile Internet (MI) plan' with two bullet points about data service on devices and logging into a T-Mobile account. The next section is 'Add to a T-Mobile Internet Lite plan', which instructs users to call 1-800-866-2453 and lists four bullet points regarding data passes, consumption notifications, recommendations from the Internet Data Estimator, and information about T-Mobile Internet Lite and Backup Internet plans. The text for the last bullet point is partially cut off at the bottom of the screenshot.

Add to a prepaid plan

To purchase a pass on your prepaid plan, call T-Mobile customer service [1-877-746-0909](tel:1-877-746-0909) for assistance.

- You can get a 1-day pass or a 1-week (7-day) pass.
- Automated account help and customer service representatives are available 24 hours a day, 7 days a week.
- For the hearing impaired, TTY service is available by calling [1-877-296-1018](tel:1-877-296-1018), 7 days a week, from 3 a.m.-10 p.m. PT.

Add to a prepaid Mobile Internet (MI) plan

- Prepaid Mobile Internet (MI) plans provide data service on devices such as laptop sticks, tablets, and mobile hotspots.
- To add prepaid Mobile Internet, [log in to your T-Mobile.com](#) account.

Add to a T-Mobile Internet Lite plan

To purchase a pass on your Internet Lite plan, contact us at [1-800-866-2453](tel:1-800-866-2453) for assistance.

- If you have a 300 GB Internet Lite plan, you can purchase a 10 GB Internet Lite Data Pass (\$10 per line) or 25 GB Internet Lite Data Pass (\$20 per line)
- You will receive a message to your gateway and an email (if you have an email address on file) at 80%, 95%, and 100% consumption of the Lite Data Pass.
- If you need to add a Lite Data Pass to supplement your data each month, you may benefit from a higher data plan. Use the [Internet Data Estimator](#) to get a recommendation for the best Internet Lite plan for you.
- Check out [T-Mobile Internet Lite](#) for more information about how to check your data and manage your plan.
- If you have a T-Mobile Backup Internet plan and need additional data, contact us at [1-800-866-2453](tel:1-800-866-2453) to review your options.

<https://www.t-mobile.com/support/plans-features/data-passes#prepaid>

Data passes

Pass options

- On-Demand data passes:
 - Temporarily add high-speed data to your account and can be added to extend your monthly available high-speed data.
 - Once the high-speed data bucket is reached, unlimited data continues at reduced speeds. To continue service with high-speed data, another pass must be purchased.
 - On-Demand passes can be purchased with refill cards or prepaid service account balances.
- One-Day HD Video Streaming passes:
 - May be available in the US on the T-Mobile network only.
 - Prepaid HD Streaming passes do not have a resolution cap.
 - HD streaming is not available when roaming in Canada, Mexico, or while roaming.

Add data or HD streaming pass

1. [Log in to your T-Mobile Prepaid account.](#)
2. Go to **Line Details** from the homepage or main.
3. Select **Add On-Demand passes**.
4. Select from available services.
5. Select **Set order date and time**.
6. **Add to cart** and complete the purchase.

To provide the best possible experience for the most possible customers on their T-Mobile-branded plans, and to minimize capacity issues and degradation in network performance, we manage significant high-speed data usage on the vast majority of our plans through prioritization. Heavy Data Users (as defined by a customer's rate plan) will have their data usage prioritized below the data usage (including tethering) of other customers at times and at locations where there are competing customer demands for network resources, which may result in slower data speeds. At the start of the next bill cycle, the customer's usage status is reset, and this data traffic is no longer prioritized below other traffic. Customers who use data in violation of their Rate Plan terms or T-Mobile's Terms and Conditions may be excluded from this calculation. Data features that may not count against the high-speed data allotment for some plans, such as certain data associated with Music Freedom, or Binge On, still count towards all customers' usage for this calculation. Smartphone Mobile HotSpot (tethering) data is also included in this calculation. Data used for customer service applications, such as the T-Mobile My Account app does not count towards customers' usage for this calculation. To help avoid application of this practice, and reduce mobile data consumption, customers can set automatic updating of apps, podcasts and file downloads to run off Wi-Fi (making sure to connect to Wi-Fi to update applications and system periodically).

	<p>https://www.t-mobile.com/responsibility/consumer-info/policies/internet-service</p> <p>Service plans provided through the Accused Instrumentalities involve differentiating between different types of data traffic, including for example detecting and differentiating for data usage accounting purposes what data is used for video streaming at a user device, what data is used for hotspot or tethering purposes at a user device. Detection of different types of traffic by the Accused Instrumentalities result in the filtering of those traffic events in a network traffic inspection system. The Accused Instrumentalities further execute network policy enforcement actions in response to the detection of certain types of data traffic. As an example, the traffic classification filter for detecting a request from a user device to purchase additional data comprises a first traffic classification filter, and the traffic classification filter for detecting traffic not related to a user's request to purchase additional data comprises a second traffic classification filter.</p> <p>As another example, the traffic classification filter for detecting a device's request for streaming video data comprises a first traffic classification filter, and the traffic classification filter for detecting a device's request for non-video-streaming data comprises a second traffic classification filter.</p>
<p>1[e] process the first service plan component and the second service plan component to create a network provisioning instruction set in accordance with a prioritization of the first traffic classification filter over the second traffic classification filter, the network provisioning instruction set comprising one or more traffic inspection provisioning instructions for the network traffic inspection system and one or more policy enforcement provisioning instructions for the network policy enforcement system, the network traffic inspection system and the network policy enforcement system implementing one or</p>	<p>The Accused Instrumentalities process service plan components to create a network provisioning instruction set in accordance with a prioritization of a first traffic classification filter over a second traffic classification filter. As one example, the Accused Instrumentalities process various service plan components for a particular service plan for a subscriber, including the claimed first and second service plan components, to create network provisioning instructions defined by logic for prioritizing one traffic classification filter over another. For example, the Accused Instrumentalities utilize traffic inspection and other techniques to determine whether a user of a device connected to the wireless access network is requesting additional data to use on the wireless access network, and to further prioritize such data traffic as a part of the network provisioning instructions and to enforce their priority by, for example, specifically configuring the device to access the wireless access network for the purpose of purchasing additional data to use on the wireless access network. Another example of traffic classification filters which result in the network policy enforcement system causing policies to be applied to the user device would be the Accused Instrumentalities' traffic classification filters for inspecting traffic and detecting traffic related to video streaming and HD video streaming, which results in the network policy enforcement system implementing policies to for setting</p>

more policies applicable to the wireless end-user device;	<p>maximum bandwidth for a particular traffic stream based on whether the subscriber account is configured by the Accused Instrumentalities as being allowed to stream HD video or not; if HD video streaming is permitted (e.g., the subscriber account has paid for a “HD Streaming Pass” add-on functionality), the traffic classification filter for detecting data traffic for HD streaming video is prioritized. As another example, the Accused Instrumentalities apply different access priority rules based on the type of subscriber account, where a first service plan component and a second service plan component may refer to the service plans of two different subscriber plans. As another example, a traffic classification filter for inspecting and detecting hotspot data is used to enforce the relatively lower levels of service priority that carriers, including T-Mobile, accord to hotspot data over other more data such as data used by accounts determined by the Accused Instrumentalities to be for “first responder” use.</p> <p><i>See, e.g.:</i></p>

T-Mobile Premium Data Explained

QCI 6 T-Mobile Priority 1		PLANS Magenta Magenta MAX T-Mobile Prepaid	SPEED DURING CONGESTION 50Mbps, 14Mbps 100% speed
QCI 7 T-Mobile Priority 2		Essentials Metro by T-Mobile T-Mobile MVNOs	14Mbps, 3Mbps 30% speed
QCI 8 T-Mobile Priority 3		Hotspot data	Not tested
QCI 9 T-Mobile Priority 4		Essentials (after 50GB) Magenta (after 50GB) T-Mobile Prepaid (after 50GB)	Metro (after 35GB) 8Mbps, 7Mbps 15% speed

<https://www.bestphoneplans.net/news/data-priority>

What speeds and performance can T-Mobile-branded Broadband Internet Access Services customers expect? Where are these speeds available?

Many factors affect the speed and performance that customers experience, including the programs or services running on the device, proximity to a cell site, the capacity of the cell site, weather, the surrounding terrain, use inside a building or moving vehicle, radio frequency interference, how many other customers are attempting to use the same spectrum resources, any high-speed data allotment, the rate plans or features you select, and uses that affect your network prioritization, such as whether you are using Smartphone Mobile HotSpot (tethering) or if you are a Heavy Data User. For most T-Mobile-branded rate plans (as well as for most legacy Sprint-branded rate plans for customers who have not yet transitioned), a "Heavy Data User" is defined as a customer using more than 50GB of data (100GB of data for new Magenta plans activated beginning February 24, 2021) in a billing cycle. The threshold number is periodically evaluated across our rate plans and brands to manage network traffic and deliver a good experience to all customers while offering a range of customer choices. You can always check the threshold amount for a rate plan by speaking with a representative, review our rate cards or T-Mobile.com, or by logging in to my.t-mobile.com, or the T-Mobile app. The term "Heavy Data User" does not apply to customers on Magenta MAX, a customer choice we are offering as we explore the expanding capacity of our 5G network, or on a small number of T-Mobile-branded business and government-oriented plans, which are not subject to a threshold.

In addition, many T-Mobile plans use video streaming optimization when connected to the cellular network to deliver a DVD-quality (up to 2.5 Mbps) video experience with minimal buffering while streaming. T-Mobile plans optimize data streams that are identified by our packet-core network as video; video providers may also choose to establish protocols to self-optimize their video. As described above, customers may also have selected other video experiences – e.g., selecting Ultra HD video on Magenta MAX – resulting in variation in streaming quality.

	<p>Additionally, we prioritize network data by plan and brand to deliver a range of customer choice points at great values. Data for customers on most T-Mobile-branded plans (and for customers on Sprint-branded plans while using the T-Mobile network), is prioritized before the data of customers on Essentials plans and Metro by T-Mobile or Assurance Wireless-branded plans. Mobile internet plans offered after December 12, 2020 with 30GB or more data per month, and Project 10Million and some other education-focused mobile internet plans, are prioritized next. The vast majority of customers on T-Mobile-branded, Sprint-branded, Metro by T-Mobile-branded, and Assurance Wireless-branded plans receive higher priority than the small fraction of customers who are Heavy Data Users on their rate plan, who are prioritized last on the network after exceeding the relevant threshold for the current billing cycle. T-Mobile Home Internet (available in select locations) customers receive the same network prioritization as Heavy Data Users, but should be less likely to experience congestion because the equipment is stationary and available in limited areas.</p> <p>https://www.t-mobile.com/responsibility/consumer-info/policies/internet-service</p> <p>On information and belief, the Accused Instrumentalities specifically transmit traffic control-related instructions to mobile devices in the wireless access network based on type of traffic, type of subscriber plan, and priority levels for types of data and/or subscriber account type based on the Accused Instrumentalities' inspection of traffic to and from the device and the account associated with the device.</p>
1[f] provide the one or more traffic inspection provisioning instructions to the network traffic inspection system; and	<p>The Accused Instrumentalities provide the one or more traffic provisioning instructions to the network traffic inspection system. As an example, the Accused Instrumentalities, by providing a traffic inspection provisioning instruction, cause and enable the traffic inspection system to inspect traffic to detect certain types of traffic and events, such as a user device attempting to use data for streaming video, HD streaming video, hotspot or tethering usage, and to purchase additional data.</p> <p><i>See, e.g.:</i></p>

T-Mobile Home Internet (available in select locations) customers receive the same network prioritization as Heavy Data Users, but should be less likely to experience congestion because the equipment is stationary and available in limited areas.</p> <p>https://www.t-mobile.com/responsibility/consumer-info/policies/internet-service</p>
<p>2. The network service plan provisioning system of claim 1, wherein process the first service plan component and the second service plan component to create a network provisioning instruction set in accordance with a prioritization of the first traffic classification filter over the second traffic classification filter comprises order traffic inspection comparison operations in the one or more traffic inspection provisioning instructions such that the one or more traffic inspection provisioning instructions direct the network traffic inspection system to determine whether the traffic event possesses the characteristic that matches the first traffic classification filter before determining whether the traffic event possesses the characteristic that matches the second traffic classification filter.</p>	<p>The Accused Instrumentalities comprise “network service plan provisioning system of claim 1, wherein process the first service plan component and the second service plan component to create a network provisioning instruction set in accordance with a prioritization of the first traffic classification filter over the second traffic classification filter comprises order traffic inspection comparison operations in the one or more traffic inspection provisioning instructions such that the one or more traffic inspection provisioning instructions direct the network traffic inspection system to determine whether the traffic event possesses the characteristic that matches the first traffic classification filter before determining whether the traffic event possesses the characteristic that matches the second traffic classification filter.”</p> <p><i>See</i>, for example, the disclosures identified for claim 1.</p> <p>As a further example, the Accused Instrumentalities apply different access priority rules based on the type of subscriber account, where a first service plan component and a second service plan component may refer to the service plans of two different subscriber plans to order subscribers into various priorities, such as “top priority” or “QCI” level. As another example, a traffic classification filter for inspecting and detecting hotspot data is used to enforce the relatively lower levels of service priority that carriers, including T-Mobile, accord to hotspot data over other more data such as data used by accounts determined by the Accused Instrumentalities to be for “first responder” use.</p>

<p>3. The network service plan provisioning system of claim 2, wherein process the first service plan component and the second service plan component to create a network provisioning instruction set in accordance with a prioritization of the first traffic classification filter over the second traffic classification filter further comprises include in the network provisioning instruction set one or more instructions directing the network traffic inspection system to determine whether the traffic event possesses the characteristic that matches the second traffic classification filter only if the traffic event does not possess the characteristic that matches the first traffic classification filter.</p>	<p>The Accused Instrumentalities comprise “network service plan provisioning system of claim 2, wherein process the first service plan component and the second service plan component to create a network provisioning instruction set in accordance with a prioritization of the first traffic classification filter over the second traffic classification filter further comprises include in the network provisioning instruction set one or more instructions directing the network traffic inspection system to determine whether the traffic event possesses the characteristic that matches the second traffic classification filter only if the traffic event does not possess the characteristic that matches the first traffic classification filter.”</p> <p><i>See, for example, the disclosures identified for claims 1-2.</i></p> <p>As a further example, the Accused Instrumentalities apply different access priority rules based on the type of subscriber account, where a first service plan component and a second service plan component may refer to the service plans of two different subscriber plans into various priorities based on characteristics that match certain filters, but not others.</p>
<p>4. The network service plan provisioning system of claim 2, wherein process the first service plan component and the second service plan component to create a network provisioning instruction set in accordance with a prioritization of the first traffic classification filter over the second traffic classification filter further comprises include in the network provisioning instruction set one or more instructions directing the network traffic inspection system to determine whether the traffic event also possesses the characteristic that matches the second traffic classification filter if the traffic event possesses the characteristic that</p>	<p>The Accused Instrumentalities comprise “network service plan provisioning system of claim 2, wherein process the first service plan component and the second service plan component to create a network provisioning instruction set in accordance with a prioritization of the first traffic classification filter over the second traffic classification filter further comprises include in the network provisioning instruction set one or more instructions directing the network traffic inspection system to determine whether the traffic event also possesses the characteristic that matches the second traffic classification filter if the traffic event possesses the characteristic that matches the first traffic classification filter.”</p> <p><i>See, for example, the disclosures identified for claims 1-2.</i></p> <p>As a further example, the Accused Instrumentalities apply different access priority rules based on the type of subscriber account, where a first service plan component and a second service plan component may refer to the service plans of two different subscriber plans into various priorities based on characteristics that match more than one filter.</p>

matches the first traffic classification filter.	
5. The network service plan provisioning system of claim 1, further comprising:	<p>The Accused Instrumentalities comprise “network service plan provisioning system of claim 1.”</p> <p><i>See</i>, for example, the disclosures identified for claim 1.</p>
[5a] a policy enforcement priority rule datastore including a policy enforcement priority rule for determining whether the traffic event possesses the characteristic that matches the first traffic classification filter before determining whether the traffic event possesses the characteristic that matches the second traffic classification filter,	<p>The Accused Instrumentalities comprise “a policy enforcement priority rule datastore including a policy enforcement priority rule for determining whether the traffic event possesses the characteristic that matches the first traffic classification filter before determining whether the traffic event possesses the characteristic that matches the second traffic classification filter.”</p> <p><i>See</i>, for example, the disclosures identified for claims 1-2.</p>
[5b] and wherein process the first service plan component and the second service plan component to create a network provisioning instruction set in accordance with a prioritization of the first traffic classification filter over the second traffic classification filter comprises include the policy enforcement priority rule in the network provisioning instruction set.	<p>The Accused Instrumentalities comprise “wherein process the first service plan component and the second service plan component to create a network provisioning instruction set in accordance with a prioritization of the first traffic classification filter over the second traffic classification filter comprises include the policy enforcement priority rule in the network provisioning instruction set.”</p> <p><i>See</i>, for example, the disclosures identified for claims 1-3.</p>
6. The network service plan provisioning system of claim 5, wherein the policy enforcement priority rule comprises a priority order for a plurality of traffic classification filters, the plurality of traffic classification filters including the first traffic classification filter and the second traffic classification filter.	<p>The Accused Instrumentalities comprise “[t]he network service plan provisioning system of claim 5, wherein the policy enforcement priority rule comprises a priority order for a plurality of traffic classification filters, the plurality of traffic classification filters including the first traffic classification filter and the second traffic classification filter.”</p> <p><i>See</i>, for example, the disclosures identified for claim 5.</p> <p>As a further example, the Accused Instrumentalities comprise a plurality of filters (e.g., QCI1 through QCI9) with rules that comprise a priority order for the plurality of filters.</p>

<p>7. The network service plan provisioning system of claim 5, wherein the policy enforcement priority rule comprises a priority specification for one or both of the first service plan component and the second service plan component.</p>	<p>The Accused Instrumentalities comprise “[t]he network service plan provisioning system of claim 5, wherein the policy enforcement priority rule comprises a priority specification for one or both of the first service plan component and the second service plan component.”</p> <p><i>See</i>, for example, the disclosures identified for claim 5.</p>
<p>8. The network service plan provisioning system of claim 1, wherein at least one of the one or more policies is dependent on a network state.</p>	<p>The Accused Instrumentalities comprise “[t]he network service plan provisioning system of claim 1, wherein at least one of the one or more policies is dependent on a network state.”</p> <p><i>See</i>, for example, the disclosures identified for claim 1.</p> <p>As a further example, the Accused Instrumentalities comprise policies which are dependent on network states (e.g. congestion, and/or roaming). <i>See, e.g.:</i></p> <p>Where the network is lightly loaded in relation to available capacity, a customer whose data is prioritized higher than other traffic will notice little, if any, effect from having higher priority. This will be the case in the vast majority of times and locations. Customers may notice reduced speeds in comparison to customers with a higher priority during network congestion. At times and at locations where the network is heavily loaded in relation to available capacity, these customers will likely see significant reductions in data speeds, especially if they are engaged in data-intensive activities. Customers should be aware that these practices may occasionally result in speeds below those typically experienced on our 5G or LTE networks, including a greater likelihood of reduced speeds in the lower end of the speed ranges. Depending on the extent of network congestion, these customers may notice more frequent impacts to some video streaming, file downloads, and other high-bandwidth activities. T-Mobile constantly works to improve network performance and capacity, but there are physical and technical limits on how much capacity is available, and in constrained locations the frequency of heavy loading in relation to available capacity may be greater than in other locations. When network loading goes down or the customer moves to a location that is less heavily loaded in relation to available capacity, the customer's speeds will likely improve.</p> <p>https://www.t-mobile.com/responsibility/consumer-info/policies/internet-service</p>

	<p>CAN I ROAM ON MY DEVICE?</p> <p>Domestic Roaming. Your Device may connect to another provider's network ("Off-Net"). This may happen even when you are within the T-Mobile coverage area. Check your Device to determine if you are Off-Net. Please do not abuse this; we may limit or terminate your Service if you do. Your device may also connect to another provider's secured Wi-Fi network. See WHAT ARE THE PERMITTED AND PROHIBITED USES FOR MY DEVICE AND SERVICE? section for additional info.</p> <p>https://www.t-mobile.com/responsibility/legal/terms-and-conditions</p>
<p>9. The network service plan provisioning system of claim 8, wherein the network state comprises a congestion state of the wireless access network, a network location, a type of the wireless access network, whether the wireless access network is a roaming network, a routing identifier associated with the wireless access network, or a combination of these.</p>	<p>The Accused Instrumentalities comprise "[t]he network service plan provisioning system of claim 8, wherein the network state comprises a congestion state of the wireless access network, a network location, a type of the wireless access network, whether the wireless access network is a roaming network, a routing identifier associated with the wireless access network, or a combination of these."</p> <p>See, for example, the disclosures identified for claims 1 and 8.</p> <p>As a further example, the Accused Instrumentalities comprise network states, e.g. congestion state, network location, roaming, and/or routing identifiers. <i>See, e.g.:</i></p> <p>Where the network is lightly loaded in relation to available capacity, a customer whose data is prioritized higher than other traffic will notice little, if any, effect from having higher priority. Check your Device to determine if you are Off-Net. Please do not abuse this; we may limit or terminate your Service if you do. Your device may also connect to another provider's secured Wi-Fi network. See WHAT ARE THE PERMITTED AND PROHIBITED USES FOR MY DEVICE AND SERVICE? section for additional info.</p> <p>https://www.t-mobile.com/responsibility/legal/terms-and-conditions</p>
10. The network service plan provisioning system of claim 9, wherein the congestion state is based on a time of day, a measure of network congestion, a measure of a delay, a measure of a jitter, a packet error rate, or a combination of these.	<p>The Accused Instrumentalities comprise "[t]he network service plan provisioning system of claim 9, wherein the congestion state is based on a time of day, a measure of network congestion, a measure of a delay, a measure of a jitter, a packet error rate, or a combination of these."</p> <p>See, for example, the disclosures identified for claims 1, and 8-9.</p>
11. The network service plan provisioning system of claim 5, wherein the one or more network elements are further configured to provide a user interface for a service plan design environment that provides for entering the policy enforcement priority rule in the design environment by entering a priority assignment for the first service plan component, entering a priority assignment for the second service plan component, positioning the first and second service plan components in a priority ordering, defining the first or second service plan component as belonging to a service type that has an implied or literal ordering, or a combination of these.	<p>The Accused Instrumentalities comprise "[t]he network service plan provisioning system of claim 5, wherein the one or more network elements are further configured to provide a user interface for a service plan design environment that provides for entering the policy enforcement priority rule in the design environment by entering a priority assignment for the first service plan component, entering a priority assignment for the second service plan component, positioning the first and second service plan components in a priority ordering, defining the first or second service plan component as belonging to a service type that has an implied or literal ordering, or a combination of these."</p> <p>See, for example, the disclosures identified for claims 1, and 8-9.</p> <p>On information and belief, the Accused Instrumentalities are configured to provide a user interface for a service plan design environment that provides for entering the policy enforcement priority rule in the design environment by entering a priority assignment for service plan components, ordering, and/or grouping to define filters and logic to implement those rules on traffic as shown by the exemplary citations in claims 1 and 8-9 above.</p>

<p>12. The network service plan provisioning system of claim 1, wherein the information specifying the first traffic classification filter comprises an inspection criterion selected from a group of inspection criteria consisting of: specific device application, a specific network destination, a specific network source, a specific traffic type, a specific content type, a specific traffic protocol, and a combination of two or more of the inspection criteria.</p>	<p>The Accused Instrumentalities comprise “[t]he network service plan provisioning system of claim 1, wherein the information specifying the first traffic classification filter comprises an inspection criterion selected from a group of inspection criteria consisting of: specific device application, a specific network destination, a specific network source, a specific traffic type, a specific content type, a specific traffic protocol, and a combination of two or more of the inspection criteria.”</p> <p><i>See</i>, for example, the disclosures identified for claims 1, and 8-9.</p> <p>As a further example, the information specifying traffic classification filters comprises inspection criterion such as plan level, plan type, plan feature, and/or plan option (e.g., Personal or Business, Essentials, Go5G, Go5G Plus, Go5G Next, Postpaid, Prepaid, Mobile Hotspot, Data Pass, HD streaming, Binge On, etc.), as well as subscriber type (e.g., first responder, business, enterprise, personal, MVNO, etc.), usage type (voice, video, gaming, messaging, etc.), usage level (e.g., heavy data users), content type (video, messaging, voice, etc.).</p>
<p>13. The network service plan provisioning system of claim 1, wherein the first or second policy enforcement action is an action selected from a group of actions consisting of: apply a traffic control policy; apply a service usage accounting, charging, or billing policy; apply a service notification policy; and a combination of two or more of the actions.</p>	<p>The Accused Instrumentalities comprise “[t]he network service plan provisioning system of claim 1, wherein the first or second policy enforcement action is an action selected from a group of actions consisting of: apply a traffic control policy; apply a service usage accounting, charging, or billing policy; apply a service notification policy; and a combination of two or more of the actions.”</p> <p><i>See</i>, for example, the disclosures identified for claims 1, and 8-9.</p> <p>As a further example, the policy enforcement actions such as reducing data speeds, account for/bill for additional data and account features, notify users regarding their usage, etc.</p>
<p>15. The network service plan provisioning system of claim 1, wherein the one or more network elements are further configured to include in the network provisioning instruction set an instruction to assist in enforcing a classification-based charging policy, wherein the classification is selected</p>	<p>The Accused Instrumentalities comprise “[t]he network service plan provisioning system of claim 1, wherein the one or more network elements are further configured to include in the network provisioning instruction set an instruction to assist in enforcing a classification-based charging policy, wherein the classification is selected from the group of classification categories consisting of: application, destination, network, time of day, congestion state, quality of service, content type, and a combination of two or more of the classification categories.”</p> <p><i>See</i>, for example, the disclosures identified for claims 1, 8-9, and 15.</p>

<p>from the group of classification categories consisting of: application, destination, network, time of day, congestion state, quality of service, content type, and a combination of two or more of the classification categories.</p>	
<p>16. The network service plan provisioning system of claim 1, wherein the one or more network elements are further configured to include in the network provisioning instruction set an instruction to assist in presenting a service buy page notification with an actionable response.</p>	<p>The Accused Instrumentalities comprise “the one or more network elements are further configured to include in the network provisioning instruction set an instruction to assist in presenting a service buy page notification with an actionable response.” <i>See, e.g.:</i></p> <p>Resetting the modem based on PCO values</p> <p>Based on PCO values received from the network, the modem will be reset in the following scenarios:</p> <ul style="list-style-type: none"> • The user completed self-activation after receiving PCO = 5 from the network. A new PCO value (3, 0 or anything Mobile Operator App can recognize) will be sent to the OS and the OS will pass it to Mobile Operator App. • The user added more credit to their account after receiving PCO = 3. A new PCO value (0, or anything Mobile Operator App can recognize) will be sent to the OS and the OS will pass it to Mobile Operator App. <p>The host is not aware of the modem being reset, so the activated connections from the host will not be deactivated and the modem should automatically re-establish connection with those PDN after resetting. Upon establishing connection and receiving a new incoming PCO value from the network, the modem will provide an unsolicited NDIS_STATUS_WWAN_PCO_STATUS notification to the host.</p> <p>The following diagram illustrates the modem's reset flow when one of these scenarios occurs, with Verizon Wireless as the example MO:</p>  <pre> graph TD A((PCO value = 5 and user activated the SIM card)) --> D((Verizon Wireless Modem reset)) B((PCO value = 3 and user added credit)) --> D D --> C((Modem automatically reconnected to internet PDN)) C --> E((Provide unsolicited notification to host about modem status (new PCO value))) </pre>

	https://learn.microsoft.com/en-us/windows-hardware/drivers/network/mb-protocol-configuration-options-pco-operations
21. The network service plan provisioning system of claim 1, wherein the one or more network elements are further configured to facilitate reuse of the first service plan component, the second service plan component, the first traffic classification filter, the second traffic classification filter, the first policy enforcement action, or the second policy enforcement action in a plurality of service plans by storing the first service plan component, the second service plan component, the first traffic classification filter, the second traffic classification filter, the first policy enforcement action, and the second policy enforcement action as one or more objects in a catalog.	<p>The Accused Instrumentalities comprise “[t]he network service plan provisioning system of claim 1, wherein the one or more network elements are further configured to facilitate reuse of the first service plan component, the second service plan component, the first traffic classification filter, the second traffic classification filter, the first policy enforcement action, or the second policy enforcement action in a plurality of service plans by storing the first service plan component, the second service plan component, the first traffic classification filter, the second traffic classification filter, the first policy enforcement action, and the second policy enforcement action as one or more objects in a catalog.”</p> <p><i>See, for example, the disclosures identified for claims 1, 8-9, and 15.</i></p>
22. The network service plan provisioning system of claim 1, wherein the first service plan component further comprises an additional policy enforcement action to augment the first policy enforcement action, and wherein the second service plan component further comprises the additional policy enforcement action to augment the second policy enforcement action.	<p>The Accused Instrumentalities comprise “the first service plan component further comprises an additional policy enforcement action to augment the first policy enforcement action, and wherein the second service plan component further comprises the additional policy enforcement action to augment the second policy enforcement action.” For example, the service plan components comprise an additional policy enforcement action that throttles data when high-speed data usage for the service period exceeds the limit under the subscription plan whether the traffic event possesses a characteristic that matches the first or second traffic classification filter. <i>See claim 1.</i></p>
23. The network service plan provisioning system of claim 1, wherein the first service plan component further comprises an additional policy enforcement action to over-ride the first	<p>The Accused Instrumentalities comprise “the first service plan component further comprises an additional policy enforcement action to over-ride the first policy enforcement action, and wherein the second service plan component further comprises the additional policy enforcement action to over-ride the second policy enforcement action.” For example, the service plan components comprise an additional policy enforcement action that throttles data when high-</p>

<p>policy enforcement action, and wherein the second service plan component further comprises the additional policy enforcement action to over-ride the second policy enforcement action.</p>	<p>speed data usage for the service period exceeds the limit under the subscription plan whether the traffic event possesses a characteristic that matches the first or second traffic classification filter. <i>See</i> claim 1.</p>
<p>28. The network service plan provisioning system of claim 1, wherein the one or more network elements are further configured to obtain service plan parameters for multiple service plans, combine one or more service policies for the multiple service plans into one composite-plan policy set, and provision the network policy enforcement system to enforce the composite policies for the multiple service plans.</p>	<p>The Accused Instrumentalities comprise “[t]he network service plan provisioning system of claim 1, wherein the one or more network elements are further configured to obtain service plan parameters for multiple service plans, combine one or more service policies for the multiple service plans into one composite-plan policy set, and provision the network policy enforcement system to enforce the composite policies for the multiple service plans.”</p> <p><i>See</i>, for example, the disclosures identified for claims 1, 8-9, and 15.</p>
<p>30. The network service plan provisioning system of claim 1, wherein the first service plan component is associated with a first priority, and wherein the second service plan component is associated with a second priority, the second priority being lower than the first priority, and wherein process the first service plan component and the second service plan component to create a network provisioning instruction set in accordance with a prioritization of the first traffic classification filter over the second traffic classification filter comprises include in the network provisioning instruction set one or more first instructions directing the network traffic inspection system to determine whether the traffic event possesses the</p>	<p>The Accused Instrumentalities comprise “[t]he network service plan provisioning system of claim 1, wherein the first service plan component is associated with a first priority, and wherein the second service plan component is associated with a second priority, the second priority being lower than the first priority, and wherein process the first service plan component and the second service plan component to create a network provisioning instruction set in accordance with a prioritization of the first traffic classification filter over the second traffic classification filter comprises include in the network provisioning instruction set one or more first instructions directing the network traffic inspection system to determine whether the traffic event possesses the characteristic that matches the first traffic classification filter and to determine whether the traffic event possesses the characteristic that matches the second traffic classification filter, and one or more second instructions directing the network policy enforcement system to enforce the first network policy enforcement action when the traffic event possesses both the characteristic that matches the first traffic classification filter and the characteristic that matches the second traffic classification filter.”</p> <p><i>See</i>, for example, the disclosures identified for claims 1, 8-9, and 15.</p>

<p>characteristic that matches the first traffic classification filter and to determine whether the traffic event possesses the characteristic that matches the second traffic classification filter, and one or more second instructions directing the network policy enforcement system to enforce the first network policy enforcement action when the traffic event possesses both the characteristic that matches the first traffic classification filter and the characteristic that matches the second traffic classification filter.</p>	
<p>31. The network service plan provisioning system of claim 1, wherein the first service plan component is associated with a first priority, and wherein the second service plan component is associated with a second priority, the second priority being lower than the first priority, and wherein process the first service plan component and the second service plan component to create a network provisioning instruction set in accordance with a prioritization of the first traffic classification filter over the second traffic classification filter comprises include in the network provisioning instruction set one or more first instructions directing the network traffic inspection system to determine whether the traffic event possesses the characteristic that matches the first traffic classification filter, and one or more second instructions directing the network</p>	<p>The Accused Instrumentalities comprise “[t]he network service plan provisioning system of claim 1, wherein the first service plan component is associated with a first priority, and wherein the second service plan component is associated with a second priority, the second priority being lower than the first priority, and wherein process the first service plan component and the second service plan component to create a network provisioning instruction set in accordance with a prioritization of the first traffic classification filter over the second traffic classification filter comprises include in the network provisioning instruction set one or more first instructions directing the network traffic inspection system to determine whether the traffic event possesses the characteristic that matches the first traffic classification filter, and one or more second instructions directing the network policy enforcement system to enforce only the first network policy enforcement action when the traffic event possesses the characteristic that matches the first traffic classification filter.”</p> <p><i>See, for example, the disclosures identified for claims 1, 8-9, and 15.</i></p>

<p>policy enforcement system to enforce only the first network policy enforcement action when the traffic event possesses the characteristic that matches the first traffic classification filter.</p>	
<p>32. traffic inspection provisioning instructions so that when the network traffic inspection system determines that the traffic event possesses the characteristic that matches the first traffic classification filter and the characteristic that matches the second traffic classification filter, the network policy enforcement system applies the first policy enforcement action but does not apply the second policy enforcement action.

General QCI Levels

QCI 1-5 TOP PRIORITY	Includes: Conversational voice, live video streaming, real-time gaming, buffered video streaming, group and picture messaging
QCI 6 DATA PRIORITY 1	Includes: Cellular data use, typically on first responder, business, and enterprise plans
QCI 7 DATA PRIORITY 2	Includes: Cellular data use, typically on postpaid priority plans
QCI 8 DATA PRIORITY 3	Includes: Cellular data use, typically on postpaid, prepaid, and MVNO plans
QCI 9 DATA PRIORITY 4	Includes: Cellular data use, typically for heavy data users on postpaid plans and prepaid plans

These are the general priority levels, illustrated in QCI values, used by T-Mobile, Verizon, and AT&T
<https://www.bestphoneplans.net/news/data-priority>

41. The network service plan provisioning system of claim 1, wherein process the first service plan component and the second service plan component to create a network provisioning instruction set in accordance with a prioritization of the first traffic classification filter over the second traffic classification filter comprises configure the one or more

The Accused Instrumentalities comprise “process the first service plan component and the second service plan component to create a network provisioning instruction set in accordance with a prioritization of the first traffic classification filter over the second traffic classification filter comprises configure the one or more traffic inspection provisioning instructions so that when the network traffic inspection system determines that the traffic event possesses the characteristic that matches the first traffic classification filter and the characteristic that matches the second traffic classification filter, the network policy enforcement system applies the first policy enforcement action before applying the second policy enforcement action.” For example, the service plan components comprise a first policy enforcement action that prioritizes the traffic

traffic inspection provisioning instructions so that when the network traffic inspection system determines that the traffic event possesses the characteristic that matches the first traffic classification filter and the characteristic that matches the second traffic classification filter, the network policy enforcement system applies the first policy enforcement action before applying the second policy enforcement action.	event (e.g., video streaming) and a second policy enforcement action that throttles data, when the network traffic inspection system determines that the traffic event (e.g., video streaming) possesses the characteristic that matches the first traffic classification filter and the characteristic that matches the second traffic classification filter, and high-speed data usage for the service period exceeds the limit under the subscription plan. <i>See</i> claim 1.
42. The network service plan provisioning system of claim 1, wherein the network policy enforcement system comprises a policy decision element.	The Accused Instrumentalities comprise “the network policy enforcement system comprises a policy decision element.” For example, T-Mobile’s system comprises a policy decision element that determines which service plan components to implement for a particular device based on the subscription plan associated with that device. <i>See</i> claim 1.
43. The network service plan provisioning system of claim 1, wherein the network policy enforcement system or the network traffic inspection system comprises a gateway.	The Accused Instrumentalities comprise “the network policy enforcement system or the network traffic inspection system comprises a gateway.” On information and belief, the gateway applies the network policy enforcement actions to traffic events before such traffic uses additional network resources.
44. The network service plan provisioning system of claim 1, wherein at least a portion of the network policy enforcement system is on the wireless end-user device.	The Accused Instrumentalities comprise “wherein at least a portion of the network policy enforcement system is on the wireless end-user device.” <i>See</i> claim 1.
45. The network service plan provisioning system of claim 1, wherein at least a portion of the network policy enforcement system is in a network system communicatively coupled to the wireless end-user device over the wireless access network.	The Accused Instrumentalities comprise “at least a portion of the network policy enforcement system is in a network system communicatively coupled to the wireless end-user device over the wireless access network.” <i>See</i> claim 1.
46. The network service plan provisioning system of claim 1, wherein	The Accused Instrumentalities comprise “the network traffic inspection system or the network policy enforcement system comprises a programmable element.” <i>See</i> claims 1, 44.

the network traffic inspection system or the network policy enforcement system comprises a programmable element.	
47. The network service plan provisioning system of claim 1, wherein the network policy enforcement system or the network traffic inspection system comprises a modem or an agent on the wireless end-user device.	The Accused Instrumentalities comprise “the network policy enforcement system or the network traffic inspection system comprises a modem or an agent on the wireless end-user device.” <i>See</i> claims 1, 44.
57. The network service plan provisioning system of claim 1, wherein the network policy enforcement system comprises a notification element.	The Accused Instrumentalities comprise “the network policy enforcement system comprises a notification element.” On information and belief, a notification element implements a notification function that sends a message to the wireless end-user device indicating that data usage has reached a limit for the service period under the subscription plan which causes the device to display a notification to inform the user and prompt the user to purchase additional data or an upgraded plan. <i>See</i> claim 1.

Resetting the modem based on PCO values

Based on PCO values received from the network, the modem will be reset in the following scenarios:

- The user completed self-activation after receiving PCO = 5 from the network. A new PCO value (3, 0 or anything Mobile Operator App can recognize) will be sent to the OS and the OS will pass it to Mobile Operator App.
- The user added more credit to their account after receiving PCO = 3. A new PCO value (0, or anything Mobile Operator App can recognize) will be sent to the OS and the OS will pass it to Mobile Operator App.

The host is not aware of the modem being reset, so the activated connections from the host will not be deactivated and the modem should automatically re-establish connection with those PDN after resetting. Upon establishing connection and receiving a new incoming PCO value from the network, the modem will provide an unsolicited NDIS_STATUS_WWAN_PCO_STATUS notification to the host.

The following diagram illustrates the modem's reset flow when one of these scenarios occurs, with Verizon Wireless as the example MO:

<https://learn.microsoft.com/en-us/windows-hardware/drivers/network/mb-protocol-configuration-options-pco-operations>

58. The network service plan provisioning system of claim 1, wherein the network policy enforcement system implements a notification function.

The Accused Instrumentalities comprise “the network policy enforcement system implements a notification function.” *See* claim 57.

59. The network service plan provisioning system of claim 58, wherein the one or more network elements are further configured to: obtain notification

The Accused Instrumentalities comprise “the one or more network elements are further configured to: obtain notification information, the notification information at least assisting to specify or identify a notification content, a notification trigger, or a notification offer; and

information, the notification information at least assisting to specify or identify a notification content, a notification trigger, or a notification offer; and determine at least a portion of the policy enforcement provisioning instructions based on the notification information.	determine at least a portion of the policy enforcement provisioning instructions based on the notification information.” On information and belief, the Accused Instrumentalities obtain notification information when the user purchases purchase additional data or an upgraded plan (e.g., a data add on through the T-Mobile app), which assists to identify the notification offer that resulted in the purchase, and determines at least a portion of the policy enforcement provisioning instructions (e.g., a data limit) based on the notification information.
60. The network service plan provisioning system of claim 1, wherein the one or more policies comprise a notification policy.	The Accused Instrumentalities comprise “the one or more policies comprise a notification policy.” <i>See</i> claims 57-59.
61. The network service plan provisioning system of claim 60, wherein the one or more policy enforcement provisioning instructions assist in causing a notification to be delivered to a subscriber or to the wireless end-user device.	The Accused Instrumentalities comprise “the one or more policy enforcement provisioning instructions assist in causing a notification to be delivered to a subscriber or to the wireless end-user device.” <i>See</i> claims 57-59.
62. The network service plan provisioning system of claim 61, wherein the notification comprises a selection option for providing feedback or instructions.	<p>The Accused Instrumentalities comprise “the notification comprises a selection option for providing feedback or instructions.” <i>See, e.g.:</i></p> <p>Keeping things simple yet secure – the T-Mobile app allows you to do it all in one place :</p> <ul style="list-style-type: none"> · Try the T-Mobile network with Network Pass · Switch to T-Mobile in minutes with Easy Switch · Compare network performance with Network Scorecard · Manage your account, add and remove services, and change plans · Pay bills, set-up autopay, and payment plan options... <p>https://play.google.com/store/apps/details?id=com.tmobile.pr.mytmobile&hl=en_US&pli=1</p>

	<p>Keeping things simple yet secure – the T-Mobile app allows you to do it all in one place</p> <ul style="list-style-type: none"> · Try the T-Mobile network with Network Pass · Switch to T-Mobile in minutes with Easy Switch · Compare network performance with Network Scorecard · Manage your account, add and remove services, and change plans · Pay bills, set-up autopay, and payment plan options · Shop devices and view offers · Manage international data · Profile settings <p>Don't forget to enroll in bio authentication in your phone settings to easily authenticate while on the go!</p> <p>https://apps.apple.com/us/app/t-mobile/id561625752</p> <p>Manage Marketing Communication Preferences</p> <p>Decide how you want to receive information regarding T-Mobile products and services.</p> <ul style="list-style-type: none"> • Update your registered marketing email address preferences. • Updating the email address may not stop all communications to the previously registered address. We recommend opting out prior to updating your email address. • Lines are limited to having one email address on file at a time. • Select the T-Mobile product you use to manage email, SMS or calling preferences for general T-Mobile updates, wireless, tablets & wearables, Internet, TV, banking, and more! • As a T-Mobile customer, you can also choose to opt out of all current and future marketing communications. <p>Manage notifications</p> <ul style="list-style-type: none"> • By default, T-Mobile will always send notifications when you are approaching the talk, text, or data limits on your own line. • Primary account holders can set notification preferences when other lines on the account are approaching usage limits. <p>https://www.t-mobile.com/support/account/manage-privacy-and-notifications</p>
<p>63. The network service plan provisioning system of claim 61, wherein the notification indicates that a usage of a service plan has reached a particular percentage of a limit, or that a requested network activity has been capped because a policy limit has been reached.</p>	<p>The Accused Instrumentalities comprise “the notification indicates that a usage of a service plan has reached a particular percentage of a limit, or that a requested network activity has been capped because a policy limit has been reached.” <i>See</i> claims 57-59.</p>
<p>64. The network service plan provisioning system of claim 61, wherein</p>	<p>The Accused Instrumentalities comprise “the notification provides information about a service plan limit or an overage.” <i>See</i> claims 57-59.</p>

the notification provides information about a service plan limit or an overage.	
65. The network service plan provisioning system of claim 61, wherein the notification provides information about an offer.	The Accused Instrumentalities comprise “the notification provides information about an offer.” <i>See</i> claims 57-59.
66. The network service plan provisioning system of claim 65, wherein the offer is an offer to allow an overage, an offer for a new service plan, or an offer to block an ongoing usage.	The Accused Instrumentalities comprise “the offer is an offer to allow an overage, an offer for a new service plan, or an offer to block an ongoing usage.” <i>See</i> claims 57-59.
68. The network service plan provisioning system of claim 61, wherein the notification provides information about an activity of the wireless end-user device that has been blocked, or an activity of the wireless end-user device that is not allowed.	The Accused Instrumentalities comprise “the notification provides information about an activity of the wireless end-user device that has been blocked, or an activity of the wireless end-user device that is not allowed.” <i>See</i> claims 57-59.
69. The network service plan provisioning system of claim 61, wherein the notification provides a message or an offer based on a current activity or a status of the wireless end-user device.	The Accused Instrumentalities comprise “the notification provides a message or an offer based on a current activity or a status of the wireless end-user device.” <i>See</i> claims 57-59.
70. The network service plan provisioning system of claim 69, wherein the current activity or the status of the wireless end-user device is based on the traffic event.	The Accused Instrumentalities comprise “the current activity or the status of the wireless end-user device is based on the traffic event.” <i>See</i> claims 57-59.
71. The network service plan provisioning system of claim 61, wherein the notification is an actionable notification enabling a user of the wireless end-user device to provide a response to the notification.	The Accused Instrumentalities comprise “[t]he network service plan provisioning system of claim 61, wherein the notification is an actionable notification enabling a user of the wireless end-user device to provide a response to the notification.” <i>See</i> claims 57-59.

72. The network service plan provisioning system of claim 71, wherein the response comprises a directive to dismiss the notification, a directive to cancel the notification, an acknowledgment of the notification, a request for information, or a request to make a purchase.	The Accused Instrumentalities comprise “[t]he network service plan provisioning system of claim 71, wherein the response comprises a directive to dismiss the notification, a directive to cancel the notification, an acknowledgment of the notification, a request for information, or a request to make a purchase.” <i>See</i> claims 57-59.
80. The network service plan provisioning system of claim 61, wherein the notification comprises an upsell offer.	The Accused Instrumentalities comprise “[t]he network service plan provisioning system of claim 61, wherein the notification comprises an upsell offer.” <i>See</i> claims 57-59.
85. The network service plan provisioning system of claim 61, wherein the notification comprises information about a purchase, a data usage, an application, an amount of data, a percentage, or a combination of these.	The Accused Instrumentalities comprise “[t]he network service plan provisioning system of claim 61, wherein the notification comprises information about a purchase, a data usage, an application, an amount of data, a percentage, or a combination of these.” <i>See</i> claims 57-59.
86. The network service plan provisioning system of claim 61, wherein the notification comprises information to assist a subscriber in activating the wireless end-user device, selecting a service plan for the wireless end-user device, setting a preference, or a combination of these.	The Accused Instrumentalities comprise “[t]he network service plan provisioning system of claim 61, wherein the notification comprises information to assist a subscriber in activating the wireless end-user device, selecting a service plan for the wireless end-user device, setting a preference, or a combination of these.” <i>See</i> claims 57-59.
87. The network service plan provisioning system of claim 1, wherein the one or more policies comprise a traffic control policy.	The Accused Instrumentalities comprise “[t]he network service plan provisioning system of claim 1, wherein the one or more policies comprise a traffic control policy.” <i>See</i> claim 1.
88. The network service plan provisioning system of claim 87, wherein the control policy specifies to allow, block, throttle, delay, or defer the traffic event.	The Accused Instrumentalities comprise “[t]he network service plan provisioning system of claim 87, wherein the control policy specifies to allow, block, throttle, delay, or defer the traffic event.” <i>See</i> claim 1.

89. The network service plan provisioning system of claim 87, wherein the traffic control policy is based on a network state, a device state, a service-plan-usage state, or a combination of these.	The Accused Instrumentalities comprise “[t]he network service plan provisioning system of claim 87, wherein the traffic control policy is based on a network state, a device state, a service-plan-usage state, or a combination of these.” <i>See</i> claim 1.
90. The network service plan provisioning system of claim 1, wherein the traffic event is associated with a particular destination, a particular application on the wireless end-user device, a content type, a protocol, a port, or an operating system of the wireless end-user device.	The Accused Instrumentalities comprise “the traffic event is associated with a particular destination, a particular application on the wireless end-user device, a content type, a protocol, a port, or an operating system of the wireless end-user device.” <i>See</i> claim 1.
91. The network service plan provisioning system of claim 1, wherein the traffic event is associated with a specified remote destination, a specified application, a specified operating system, a specified content, a specified protocol, or a specified port number.	The Accused Instrumentalities comprise “the traffic event is associated with a specified remote destination, a specified application, a specified operating system, a specified content, a specified protocol, or a specified port number.” <i>See</i> claim 1.
92. The network service plan provisioning system of claim 91, wherein the specified remote destination is identified by a domain or an Internet protocol (IP) address.	The Accused Instrumentalities comprise “the specified remote destination is identified by a domain or an Internet protocol (IP) address.” <i>See</i> claims 1, 91.
93. The network service plan provisioning system of claim 91, wherein the specified application is identified by a name, a hash, a certificate, or a signature.	The Accused Instrumentalities comprise “the specified application is identified by a name, a hash, a certificate, or a signature.” <i>See, e.g.:</i>

	<h2>Carrier Configuration </h2> <p>Android 6.0 and higher include a capability for privileged apps to provide carrier-specific configuration to the platform. This functionality, based on the UICC Carrier Privileges introduced in Android 5.1 (Lollipop MR1), allows carrier configuration to be moved away from the static configuration overlays and gives carriers and OEMs the ability to dynamically provide carrier configuration to the platform through a defined interface.</p> <p>A properly signed carrier app can either be preloaded in the system image, installed automatically, or manually installed through an app store. The app is queried by the platform to provide configuration for settings including:</p> <ul style="list-style-type: none"> • Roaming/nonroaming networks • Visual voicemail • SMS/MMS network settings • VoLTE/IMS configurations <p>★ Note: This app must be signed with the certificate that has a matching signature to one on the SIM. See How is privilege granted to a carrier app for details.</p> <p>https://source.android.com/docs/core/connect/carrier</p>
<p>96. The network service plan provisioning system of claim 1, wherein the first service plan component or the second service plan component comprises a carrier component, a network protection component, an application component, a sponsored component, a subscriber-paid component, a marketing interceptor component, a parental control component, a bulk component, a post-bulk component, or an end-of-life component.</p>	<p>The Accused Instrumentalities comprise “the first service plan component or the second service plan component comprises a carrier component, a network protection component, [or] an application component.” <i>See</i> claim 1.</p>
<p>98. The network service plan provisioning system of claim 1, wherein</p>	<p>The Accused Instrumentalities comprise “the first service plan component or the second service plan component is associated with a service class.” <i>See</i> claim 1.</p>

the first service plan component or the second service plan component is associated with a service class.	
99. The network service plan provisioning system of claim 98, wherein the service class is paid, marketing intercept, carrier, network protection, sponsored, parental control, open access, bulk, post-bulk, or a combination of these.	The Accused Instrumentalities comprise “the service class is paid ... carrier, network protection ... open access ... or a combination of these.” <i>See</i> claims 1, 96, 98.
112. The network service plan provisioning system of claim 1, wherein the information specifying the first traffic classification filter or the information specifying the second traffic classification filter comprises a name, a description, a filtering parameter, a launch mechanism, or a combination of these.	The Accused Instrumentalities comprise “the information specifying the first traffic classification filter or the information specifying the second traffic classification filter comprises a name, a description, a filtering parameter, a launch mechanism, or a combination of these.” <i>See</i> claim 1.
113. The network service plan provisioning system of claim 112, wherein the filter parameter specifies filtering the traffic event by destination, by application, by operating system, by protocol, or by port.	The Accused Instrumentalities comprise “the filter parameter specifies filtering the traffic event by destination, by application, by operating system, by protocol, or by port.” <i>See</i> claim 1.
120. The network service plan provisioning system of claim 1, wherein the one or more policies comprise a policy associated with a tethering function.	The Accused Instrumentalities comprise “[t]he network service plan provisioning system of claim 1, wherein the one or more policies comprise a policy associated with a tethering function.” <i>See</i> , for example, the disclosures identified for claims 1, 8-9, and 15.
121. The network service plan provisioning system of claim 1, wherein the one or more policies comprise a	The Accused Instrumentalities comprise “[t]he network service plan provisioning system of claim 1, wherein the one or more policies comprise a policy associated with a web page, a

policy associated with a web page, a domain, an application, a roaming network, an e-mail service, a networking service, a music download service, a video game service, a multimedia service, or a combination of these.	domain, an application, a roaming network, an e-mail service, a networking service, a music download service, a video game service, a multimedia service, or a combination of these.” <i>See</i> , for example, the disclosures identified for claims 1, 8-9, and 15.
---	--

Exhibit 4 - U.S. Patent No. 9,198,042 (“’042 Patent”)

Accused Instrumentalities: smartphones, basic phones, tablets, laptops, and hotspot devices sold (including those sold in bundles with data plans) or used by T-Mobile for use with T-Mobile’s wireless network services, and all versions and variations thereof since the issuance of the asserted patent.

Issued Claim(s)	Public Documentation
1. A method comprising:	To the extent the preamble is limiting, T-Mobile’s Accused Instrumentalities practice the steps of a method as set forth in the limitations below.
1[a] receiving, over a service control link, a report from a wireless end-user device, the report comprising information about a device service state;	<p>The Accused Instrumentalities comprise receiving, over a service control link, a report from a wireless end-user device, the report comprising information about a device service state. T-Mobile offers telecommunications service plans to customers that are provided through various network elements such as telecommunications base stations and cell sites, edge servers, and other telecommunications servers. T-Mobile provides various network service plans to customers for purchase, including through the T-Mobile.com website as well as through T-Mobile-provided services such as its pre-paid mobile service category, T-Mobile Prepaid Unlimited. <i>See, e.g.:</i></p>  <p>https://prepaid.t-mobile.com/home</p>

T-Mobile Unlimited rate plans.

ALL PLANS INCLUDE THESE GREAT BENEFITS

✓ Caller ID ⓘ

✓ Data Maximizer ⓘ

✓ Scam-blocking protection ⓘ

✓ Wi-Fi calling ⓘ

✓ Unlimited domestic talk ⓘ

T-Mobile Prepaid Unlimited

\$50.00/per month
+ taxes and fees.

Includes:

- Get Unlimited Talk, Text & 5G/4G data on your smartphone virtually everywhere in the U.S., with no data overages or annual contracts.

[Plan Details >](#)

Select Phone Plan

T-Mobile Prepaid Unlimited Plus

\$60.00/per month
+ taxes and fees.

Includes:

- Get Unlimited Talk, Text & 5G/4G data on your smartphone virtually everywhere in the U.S., with no data overages or annual contracts. Includes 10GB of LTE mobile hotspot to share data with other devices.

[Plan Details >](#)

Select Phone Plan

T-Mobile Prepaid 10GB

\$40.00/per month
+ taxes and fees.

Includes:

- All the nationwide Talk, Text & Data you can handle, with up to 10GB of 5G/4G for only \$40/month, giving you high speed access when you need it most. Comes with Music Unlimited so you can Jam all day without using your data on included services.

T-Mobile sells mobile devices such as phones, tablets, and hotspot access points which communicate with the T-Mobile wireless service network, which is a wireless access network. Such devices comprise end-user devices, as do devices which customers purchase elsewhere and “bring” to the T-Mobile network. *See, e.g.:*

The Accused Instrumentalities use different service plans to provide service, for example, to mobile hotspot devices, mobile phones and tablets provisioned with an “unlimited” data plan, mobile phones and tablets provisioned with a prepaid plan, mobile phones and tablets which for which the associated subscriber account has reached its allotted data limit for the service period, and mobile phones and tablets which are specifically communicating with T-Mobile servers to purchase or increase data allotments (e.g., a T-Mobile “Data Pass”).

See, e.g.:

The screenshot shows the T-Mobile website's 'Add to a prepaid plan' page. The header includes the T-Mobile logo, navigation links for Plans, Phones & devices, Deals, Coverage, and Join Us, and a 'My account' link. A secondary navigation bar lists Support, Get started, Account resources, Network & roaming, Plans support (highlighted), Device assistance, and Business support. The main content area is titled 'Add to a prepaid plan' and provides instructions on how to purchase a pass on a prepaid plan by calling T-Mobile customer service at 1-877-746-0909. It also lists three bullet points: you can get a 1-day pass or a 1-week (7-day) pass; automated account help and customer service representatives are available 24 hours a day, 7 days a week; and for the hearing impaired, TTY service is available by calling 1-877-296-1018, 7 days a week, from 3 a.m.-10 p.m. PT. Below this, there is a section for 'Add to a prepaid Mobile Internet (MI) plan' with two bullet points: Prepaid Mobile Internet (MI) plans provide data service on devices such as laptop sticks, tablets, and mobile hotspots; and to add prepaid Mobile Internet, users should log in to their T-Mobile.com account. The final section is 'Add to a T-Mobile Internet Lite plan', which instructs users to contact 1-800-866-2453 for assistance. It lists four bullet points: if you have a 300 GB Internet Lite plan, you can purchase a 10 GB Internet Lite Data Pass (\$10 per line) or 25 GB Internet Lite Data Pass (\$20 per line); you will receive a message to your gateway and an email (if you have an email address on file) at 80%, 95%, and 100% consumption of the Lite Data Pass; if you need to add a Lite Data Pass to supplement your data each month, you may benefit from a higher data plan, and you should use the Internet Data Estimator to get a recommendation for the best Internet Lite plan for you; and check out T-Mobile Internet Lite for more information about how to check your data and manage your plan. A final bullet point is partially visible: 'If you have a T-Mobile Backup Internet plan and need additional data, contact us at 1-800-866-2453 to review your options.'

<https://www.t-mobile.com/support/plans-features/data-passes#prepaid>

Verizon's network receives service plan information from devices which correspond to the subscriber service plan associated with that wireless end-user device, which is a report comprising information about a device service state. For example, Verizon's network receives an attach request, bearer resource allocation request, bearer resource modification request, or PDN connectivity request from a wireless end-user device (UE), which includes a report comprising information about the UE's service state such as UE network capability, UE status, and protocol configuration options (PCO):

3GPP TS 24.301 v15.03

Flows

There are three scenarios where the PCO value will be passed to the host:

- When a new PCO value has arrived on an activated connection
- When an app or service queries for the latest PCO value from the modem
- When a connection is bridged or activated for the first time and a PCO value already exists in the modem

For the first scenario, the modem should send an `NDIS_STATUS_WWAN_PCO_STATUS` notification to the OS indicating a new PCO value change whenever a new PCO value is received from the network, with the appropriate NDIS port number to represent the corresponding PDN. To avoid draining the battery unnecessarily, the modem should avoid noisy notifications, as described in *Modem behavior with Selective Suspend and Connected Standby*.

For the second scenario, when an app or service queries for PCO value from the modem on an activated PDN connection, the host will send the modem an `OID_WWAN_PCO` query request to read the latest cached PCO value in the modem.

For the third scenario, when a connection is activated or bridged on the host, the modem should send an `NDIS_STATUS_WWAN_PCO_STATUS` notification when a PCO value already exists in the modem for the activated or bridged connection the host requested. The notification should be passed up from the corresponding NDIS port number of the PDN.

Carrier Configuration

Android 6.0 and higher include a capability for privileged apps to provide carrier-specific configuration to the platform. This functionality, based on the [UICC Carrier Privileges](#) introduced in Android 5.1 (Lollipop MR1), allows carrier configuration to be moved away from the static configuration overlays and gives carriers and OEMs the ability to dynamically provide carrier configuration to the platform through a defined interface.

A properly signed carrier app can either be preloaded in the system image, installed automatically, or manually installed through an app store. The app is queried by the platform to provide configuration for settings including:

- Roaming/nonroaming networks
- Visual voicemail
- SMS/MMS network settings
- VoLTE/IMS configurations

★ **Note:** This app must be signed with the certificate that has a matching signature to one on the SIM. See [How is privilege granted to a carrier app](#) for details.

<https://source.android.com/docs/core/connect/carrier>

Resetting the modem based on PCO values

Based on PCO values received from the network, the modem will be reset in the following scenarios:

- The user completed self-activation after receiving PCO = 5 from the network. A new PCO value (3, 0 or anything Mobile Operator App can recognize) will be sent to the OS and the OS will pass it to Mobile Operator App.
- The user added more credit to their account after receiving PCO = 3. A new PCO value (0, or anything Mobile Operator App can recognize) will be sent to the OS and the OS will pass it to Mobile Operator App.

The host is not aware of the modem being reset, so the activated connections from the host will not be deactivated and the modem should automatically re-establish connection with those PDN after resetting. Upon establishing connection and receiving a new incoming PCO value from the network, the modem will provide an unsolicited NDIS_STATUS_WWAN_PCO_STATUS notification to the host.

The following diagram illustrates the modem's reset flow when one of these scenarios occurs, with Verizon Wireless as the example MO:

<https://learn.microsoft.com/en-us/windows-hardware/drivers/network/mb-protocol-configuration-options-pco-operations>

1[c] in response to determining that the particular service policy setting needs to be modified, sending configuration information to the wireless end-user device over the service control link, the configuration information configured to assist in modifying or allowing

The Accused Instrumentalities comprise receiving a report comprising device service states “in response to determining that the particular service policy setting needs to be modified, sending configuration information to the wireless end-user device over the service control link, the configuration information configured to assist in modifying or allowing modifications to the particular service policy setting.” T-Mobile’s network makes determinations that particular service policies for user devices need to be changed when, for example, a subscriber’s service plan is changed or service-related options are activated or deactivated (e.g., the “Data Pass” option or “HD Streaming” option).

modifications to the particular service policy setting.

On information and belief, the Accused Instrumentalities specifically transmit traffic control-related instructions to mobile devices in the wireless access network based on type of traffic, type of subscriber plan, and priority levels for types of data and/or subscriber account type based on the Accused Instrumentalities' inspection of traffic to and from the device and the account associated with the device. For example, the Accused Instrumentalities inspect data traffic to determine if it is for streaming video to devices, and manages data access by that device accordingly. *See, e.g.:*

Activation steps

If you don't have a plan that includes HD streaming, refer to [Find the right plan for you](#) to add a plan today.

From the T-Mobile app

1. Open the T-Mobile app. If you don't have it, [learn how to download it now](#).
2. Tap **MORE**
3. Go to **PROFILE SETTINGS**
4. Go to **MEDIA SETTINGS**.
5. If you have multiple lines on your account, make sure the line you're making changes to is showing. If it's not, open the menu to select another line on the account.
6. Next to **HD Video Resolution**, toggle it **ON** or **OFF**.

From T-Mobile.com

1. [Log in to T-Mobile.com](#) with your T-Mobile ID. If you don't have one, [register for a T-Mobile ID](#).
2. Select **PROFILE**.
3. Go to **MEDIA SETTINGS**.
4. By **HD Video Resolution**, set the option to **ON** or **OFF**.

HD video resolution details

- Activating HD video resolution only provides the ability to enable higher-resolution video streams by turning off video optimization. It doesn't change the actual, available resolution of streaming video.
- Video resolution isn't determined by T-Mobile, but rather it's determined by the video content provider like YouTube or Netflix.
- Once you turn it on, HD video streaming availability should take effect immediately, but it may require closing and re-opening the app or browser window, or restarting your device.

Full terms

All on-network data used, including free streaming data, counts toward the heavy-user threshold of 50GB in a billing cycle, after which a T-Mobile-branded customer will no longer receive highest priority on the network. When an HD video is active, streaming high-definition video will use data much faster than optimized video, and brings up to the possibility of de-prioritization if you use enough data to reach that limit in a given month. (Learn more about T-Mobile's [Open Internet](#) disclosures.)

<https://www.t-mobile.com/support/plans-features/activate-hd-video-streaming>

Unlimited video streaming with Binge On™

As a Simple Choice™ customer, you can stream all the video you want while on our network. Data charges do not apply.

During congestion, heavy data users (>50GB/mo. for most plans) and customers choosing lower-prioritized plans may notice lower speeds than other customers.

<https://www.t-mobile.com/tv-streaming/binge-on>

Manually update your carrier settings on your iPhone or iPad

Carrier settings updates let your carrier provider update carrier network and related settings to improve cellular network connectivity and performance. Carrier settings updates can also add support for new features like 5G or Wi-Fi Calling.

When a carrier settings update is available, you'll be prompted to install it. Installation takes less than one minute, and you can keep using your device normally. If your carrier releases a mandatory update, you'll see an OK button instead of an Update button to let you know that the update was downloaded and installed.

Simplify device and app management.

It can be hard to manage security when your workforce is dispersed. Now you can easily keep track of devices, distribute apps, and manage and monitor access and use with single-console visibility and control.

Onboard your staff with ease.

Quickly onboard and deploy new employees with new devices and secure access to the apps, information, and networks they need.

Protect company data.

Help keep company assets and data secure by easily setting policies to control access and monitor compliance. If a device is lost or stolen, you can quickly locate, lock, or wipe the device.

Resetting the modem based on PCO values

Based on PCO values received from the network, the modem will be reset in the following scenarios:

- The user completed self-activation after receiving PCO = 5 from the network. A new PCO value (3, 0 or anything Mobile Operator App can recognize) will be sent to the OS and the OS will pass it to Mobile Operator App.
- The user added more credit to their account after receiving PCO = 3. A new PCO value (0, or anything Mobile Operator App can recognize) will be sent to the OS and the OS will pass it to Mobile Operator App.

The host is not aware of the modem being reset, so the activated connections from the host will not be deactivated and the modem should automatically re-establish connection with those PDN after resetting. Upon establishing connection and receiving a new incoming PCO value from the network, the modem will provide an unsolicited `NDIS_STATUS_WWAN_PCO_STATUS` notification to the host.

The following diagram illustrates the modem's reset flow when one of these scenarios occurs, with Verizon Wireless as the example MO:

<https://learn.microsoft.com/en-us/windows-hardware/drivers/network/mb-protocol-configuration-options-pco-operations>

As another example, the Accused Instrumentalities comprise sending configuration information to the wireless end-user device wherein the wireless end-user device is an intermediate networking device, and the particular service policy setting assists one or more other end-user devices in communicating over the wireless access network via the intermediate networking device. *See* claim 4; *see also, e.g.:*

About Bluetooth, Wi-Fi, and cellular on your Apple Watch

Learn about Bluetooth and Wi-Fi for your Apple Watch and how your watch uses both. And learn how cellular on GPS + Cellular models fits in.

To enjoy every feature on your Apple Watch, you need to turn on Wi-Fi and Bluetooth on your [paired iPhone](#). Open [Control Center](#) on your iPhone, then make sure that Wi-Fi  and Bluetooth  are on.

Your Apple Watch uses Wi-Fi and Bluetooth to communicate with your paired iPhone. If you have cellular, your watch can also stay connected through a cellular network. Your watch switches between these intelligently to choose the most power-efficient connection. Here's how:

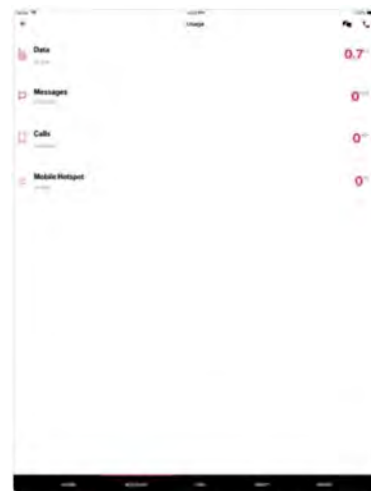

- Your Apple Watch uses Bluetooth when your iPhone is near, which conserves power.
- If Bluetooth isn't available, your Apple Watch will try to use Wi-Fi. For example, if [compatible Wi-Fi](#) is available and your iPhone isn't in Bluetooth range, your Apple Watch uses Wi-Fi.
- If Bluetooth and Wi-Fi aren't available, and you set up a cellular plan, cellular models of Apple Watch can connect to cellular networks.

<https://support.apple.com/en-us/HT204562>

	<h3>3. Select your plan and activate cellular service.</h3> <p>When you pair a new watch with the Galaxy Wearable app, you will be asked to select a T-Mobile plan to use with it.</p> <ol style="list-style-type: none">1. Select Set up a mobile plan in the Galaxy Wearable App (if you choose to skip this step, you can set up cellular later in the Galaxy Wearable app by selecting Watch Settings > Mobile Plans).2. Verify your T-Mobile account (if you're setting up for yourself, you will be asked to verify the last 4 digits of the primary account holder's SSN).3. Choose your plan and select Continue.4. Move to the bottom of the service agreement to accept, then select Continue.5. Select Use Plan to download the eSIM Profile on your watch. <p>https://www.t-mobile.com/support/smartwatches/samsung</p>
6. The method of claim 1, further comprising: obtaining a service usage measure, the service usage measure accounting for the one or more communications associated with the wireless end-user device over the wireless access network; and based on the service usage measure, taking an action.	<p>The Accused Instrumentalities comprise obtaining a service usage measure that includes a measure of service usage activity, the service usage measure accounting for the one or more communications associated with the wireless end-user device over the wireless access network; and based on the service usage measure, taking an action.</p> <p>On information and belief, the Accused Instrumentalities obtain a service usage measure accounting for communications associated with the mobile device over T-Mobile's wireless access network, including a measure of service usage activity such as information indicating overall cellular data usage and mobile hotspot data usage for the service period. Based on the service usage measure, the Accused Instrumentalities take an action such as sending configuration information that modifies a policy setting to allow, block or throttle cellular data usage or mobile hotspot data usage.</p> <p><i>See claim 1.</i></p> <p><i>See also, e.g.:</i></p>

<https://apps.apple.com/us/app/t-mobile/id561625752?platform=iphone>

<https://apps.apple.com/us/app/t-mobile/id561625752?platform=ipad>

<https://play.google.com/store/apps/details?id=com.tmobile.pr.mymobile&&pli=1>

7. The method of claim 6, wherein the service usage measure comprises a measure of a service usage activity.

The Accused Instrumentalities comprise obtaining a service usage measure that includes a measure of service usage activity, the service usage measure accounting for the one or more communications associated with the wireless end-user device over the wireless access network; and based on the service usage measure, taking an action. On information and belief, the Accused Instrumentalities obtain a service usage measure accounting for communications associated with the mobile device over T-Mobile's wireless access network, including a measure of service usage activity such as information indicating overall cellular data usage and mobile hotspot data usage for the service period. Based on the service usage measure, the Accused Instrumentalities take an action such as sending configuration information that modifies a policy setting to allow, block or throttle cellular data usage or mobile hotspot data usage.

See claim 6.

<p>8. The method of claim 6, wherein the action is to verify the service usage measure.</p>	<p>The Accused Instrumentalities comprise obtaining a service usage measure that includes a measure of service usage activity, the service usage measure accounting for the one or more communications associated with the wireless end-user device over the wireless access network; and based on the service usage measure, taking an action, wherein the action is to verify the service usage measure. On information and belief, based on the service usage measure indicating overall cellular data usage and mobile hotspot data usage for the service period, the Accused Instrumentalities verify the service usage measure to ensure that it accounts for the actual service usage of the mobile device.</p> <p><i>See claim 6.</i></p>
<p>9. The method of claim 6, wherein the action is to quarantine or suspend the wireless end-user device.</p>	<p>The Accused Instrumentalities comprise obtaining a service usage measure, the service usage measure accounting for the one or more communications associated with the wireless end-user device over the wireless access network; and based on the service usage measure, taking an action to quarantine or suspend the wireless end-user device. On information and belief, the Accused Instrumentalities obtain a service usage measure indicating a prohibited service usage activity under T-Mobile's Acceptable Use Policy, and based on the service measure, quarantine or suspend the mobile device. <i>See, e.g.:</i></p> <p>CAN T-MOBILE CHANGE, SUSPEND OR TERMINATE MY SERVICES OR THIS AGREEMENT?</p> <p>Yes. Except as described below for Rate Plans with the price-lock guarantee (including the "Un-Contract Promise"), we may change, limit, suspend or terminate your Service or this Agreement at any time, including if you engage in any of the prohibited uses described in these T&Cs, no longer reside in a T-Mobile-owned network coverage area, or engage in harassing, threatening, abusive or offensive behavior. If your Service, Product, or account is limited, suspended, or terminated and then reinstated, you may be charged a reconnection fee. Your account may still accrue charges even if the Service is suspended. You are responsible for any charges that are incurred while your Service or account is suspended.</p> <p>Under certain limited circumstances, we may also block your Device from working on our network. If the change to your Service, Product, or Rate Plan will have a material adverse effect on you, we will provide 14 days' notice of the change. You'll agree to any change by using your Service or Product after the effective date of the change. We may exclude certain types of calls, messages or sessions (e.g. conference and chat lines, broadcast, international, 900 or 976 calls, etc.), in our sole discretion, without further notice. For information about our unlocking policy, visit www.t-mobile.com/responsibility/consumer-info/policies/sim-unlock-policy.</p>

Unless explicitly permitted by your Rate Plan or Data Plan, you are not permitted to use your Device or the Services in a way that we determine:

- Uses a repeater or signal booster other than one we provide to you;
- Compromises network security or capacity, degrades network performance, uses malicious software or "malware", hinders other customers' access to the network, or otherwise adversely impacts network service levels or legitimate data flows;
- Uses applications that automatically consume unreasonable amounts of available network capacity;
- Uses applications which are designed for unattended use, automatic data feeds, automated machine-to-machine connections, or applications that are used in a way that degrades network capacity or functionality;
- Misuses the Service, including "spamming" or sending abusive, unsolicited, or other mass automated communications;
- Accesses the accounts of others without authority;
- Results in more than 50% of your voice and/or data usage being Off-Net (i.e., connected to another provider's network) for any 2 billing cycles within any 12-month period;
- Results in unusually high usage (meeting the definition of a heavy data user for your Rate Plan) and the majority of your data usage being Smartphone Mobile HotSpot (tethering) usage for any 3 billing cycles within any 6-month period;
- Uses a fixed wireless device (provided for use in a fixed location) at a location or address other than the one provided at activation;
- Resells the Service, either alone or as part of any other good or service;
- Tampers with, reprograms, alters, or otherwise modifies your Device to circumvent any of our policies or violate anyone's intellectual property rights;
- Causes harm or adversely affects us, the network, our customers, employees, business, or any other person;
- Conflicts with applicable law;
- Is not in accordance with these T&Cs; or
- Attempts or assists or facilitates anyone else in any of the above activities.

<https://www.t-mobile.com/responsibility/legal/terms-and-conditions>

Other network management

If you use your data plan in a manner that could interfere with other customers' service, affect our ability to allocate network capacity among customers, or degrade service quality for other customers, we may suspend, terminate, or restrict your data session, or switch you to a more appropriate data plan, or terminate your service.

<https://www.t-mobile.com/responsibility/consumer-info/policies/internet-service>

<p>12. The method of claim 1, wherein the configuration information comprises at least a portion of the service profile.</p>	<p>The Accused Instrumentalities comprise sending the configuration information, wherein the configuration information comprises a portion of the service profile stored in an encrypted partition of the device or in an encrypted SIM card.</p> <p><i>See claim 1.</i></p>
<p>13. The method of claim 1, wherein the service control link is secured by an encryption protocol.</p>	<p>The Accused Instrumentalities comprise sending configuration information over the service control link, wherein the service control link is secured by an encryption protocol.</p> <p>4.4.4 Integrity protection of NAS signalling messages</p> <p>4.4.4.1 General</p> <p>For the UE, integrity protected signalling is mandatory for the NAS messages once a valid EPS security context exists and has been taken into use. For the network, integrity protected signalling is mandatory for the NAS messages once a secure exchange of NAS messages has been established for the NAS signalling connection. Integrity protection of all NAS signalling messages is the responsibility of the NAS. It is the network which activates integrity protection.</p> <p>4.4.4.3 Integrity checking of NAS signalling messages in the MME</p> <p>Except the messages listed below, no NAS signalling messages shall be processed by the receiving EMM entity in the MME or forwarded to the ESM entity, unless the secure exchange of NAS messages has been established for the NAS signalling connection:</p> <ul style="list-style-type: none"> - EMM messages: - ATTACH REQUEST;

6.1.1 General

This clause describes the procedures used for EPS session management (ESM) at the radio interface (reference point "LTE-Uu").

The main function of the ESM sublayer is to support the EPS bearer context handling in the UE and in the MME.

The ESM comprises procedures for:

- the activation, deactivation and modification of EPS bearer contexts;
- the request for resources (IP connectivity to a PDN or dedicated bearer resources) by the UE; and
- the transport of user data via the control plane between the UE and the MME.

Each EPS bearer context represents an EPS bearer between the UE and a PDN. EPS bearer contexts can remain activated even if the radio and S1 bearers constituting the corresponding EPS bearers between UE and MME are temporarily released.

An EPS bearer context can be either a default bearer context or a dedicated bearer context.

A default EPS bearer context is activated when the UE requests a connection to a PDN.

Generally, ESM procedures can be performed only if an EMM context has been established between the UE and the MME, and the secure exchange of NAS messages has been initiated by the MME by use of the EMM procedures described in clause 5. The first default EPS bearer context, however, can be activated during the EPS attach procedure (see subclause 4.2). Once the UE is successfully attached, and the first default EPS bearer context has been activated during or after the attach procedure, the UE can request the MME to set up connections to additional PDNs. For each additional connection, the MME will activate a separate default EPS bearer context. A default EPS bearer context remains activated throughout the lifetime of the connection to the PDN.

6.1.2 Types of ESM procedures

	<p>2) Transaction related procedures:</p> <p>These procedures are initiated by the UE to request for resources, i.e. a new PDN connection or dedicated bearer resources, or to release these resources:</p> <ul style="list-style-type: none">- PDN connectivity procedure;- PDN disconnect procedure;- bearer resource allocation procedure;- bearer resource modification procedure. <p>3GPP TS 24.301 v15.03</p>
<p>14. The method of claim 1, wherein the device service state comprises a service profile setting, a service usage policy setting, or a device-assisted services (DAS) setting.</p>	<p>The Accused Instrumentalities comprise receiving, over a service control link, a report from a wireless end-user device, the report comprising information about a device service state, wherein the device service state comprises a service profile setting, a service usage policy setting, or a device-assisted services (DAS) setting.</p> <p><i>See claim 1.</i></p> <p><i>See also, e.g.:</i></p> <p>Manually update your carrier settings on your iPhone or iPad</p> <p>Carrier settings updates let your carrier provider update carrier network and related settings to improve cellular network connectivity and performance. Carrier settings updates can also add support for new features like 5G or Wi-Fi Calling.</p> <p>When a carrier settings update is available, you'll be prompted to install it. Installation takes less than one minute, and you can keep using your device normally. If your carrier releases a mandatory update, you'll see an OK button instead of an Update button to let you know that the update was downloaded and installed.</p> <p>https://support.apple.com/en-us/HT201270</p>

Carrier Configuration

Android 6.0 and higher include a capability for privileged apps to provide carrier-specific configuration to the platform. This functionality, based on the [UICC Carrier Privileges](#) introduced in Android 5.1 (Lollipop MR1), allows carrier configuration to be moved away from the static configuration overlays and gives carriers and OEMs the ability to dynamically provide carrier configuration to the platform through a defined interface.

A properly signed carrier app can either be preloaded in the system image, installed automatically, or manually installed through an app store. The app is queried by the platform to provide configuration for settings including:

- Roaming/nonroaming networks
- Visual voicemail
- SMS/MMS network settings
- VoLTE/IMS configurations

★ **Note:** This app must be signed with the certificate that has a matching signature to one on the SIM. See [How is privilege granted to a carrier app](#) for details.

<https://source.android.com/docs/core/connect/carrier>

Resetting the modem based on PCO values

Based on PCO values received from the network, the modem will be reset in the following scenarios:

- The user completed self-activation after receiving PCO = 5 from the network. A new PCO value (3, 0 or anything Mobile Operator App can recognize) will be sent to the OS and the OS will pass it to Mobile Operator App.
- The user added more credit to their account after receiving PCO = 3. A new PCO value (0, or anything Mobile Operator App can recognize) will be sent to the OS and the OS will pass it to Mobile Operator App.

The host is not aware of the modem being reset, so the activated connections from the host will not be deactivated and the modem should automatically re-establish connection with those PDN after resetting. Upon establishing connection and receiving a new incoming PCO value from the network, the modem will provide an unsolicited NDIS_STATUS_WWAN_PCO_STATUS notification to the host.

The following diagram illustrates the modem's reset flow when one of these scenarios occurs, with Verizon Wireless as the example MO:

<https://learn.microsoft.com/en-us/windows-hardware/drivers/network/mb-protocol-configuration-options-pco-operations>

16. The method of claim 1, wherein the device service state comprises information associated with an encryption key.

The Accused Instrumentalities comprise receiving, over a service control link, a report from a wireless end-user device, the report comprising information about a device service state, wherein the device service state comprises information associated with an encryption key. *See, e.g.:*

3GPP TS 24.301 v15.03

18. The method of claim 1, wherein the device service state comprises user status information, device status information, application status information, a device location, or a device quality-of-service (QOS) state.

The Accused Instrumentalities comprise receiving, over a service control link, a report from a wireless end-user device, the report comprising information about a device service state, wherein the device service state comprises user status information, device status information, application status information, a device location, or a device quality-of-service (QOS) state. *See, e.g.:*

3GPP TS 24.301 v15.03

Exhibit D - U.S. Patent No. 9,215,613 (“’613 Patent”)

Accused Instrumentalities: smartphones, basic phones, tablets, laptops, and hotspot devices sold (including those sold in bundles with data plans) or used by T-Mobile and all versions and variations thereof (“Accused Instrumentalities”) since the issuance of U.S. Pat. No. 9,215,613 (the “Asserted Patent”).

Claim 1

Claim	Public Documentation
[1pre] A wireless end-user device, comprising:	<p>The Accused Instrumentalities include “A wireless end-user device, comprising.”</p> <p>For example, T-Mobile sells and uses devices described by T-Mobile’s website below (e.g., devices made by Samsung, Apple, Motorola, Google, and Kyocera). These devices constitute a wireless end-user device as described in claim 1. <i>See, e.g.</i> https://www.t-mobile.com/cell-phones</p>

Claim

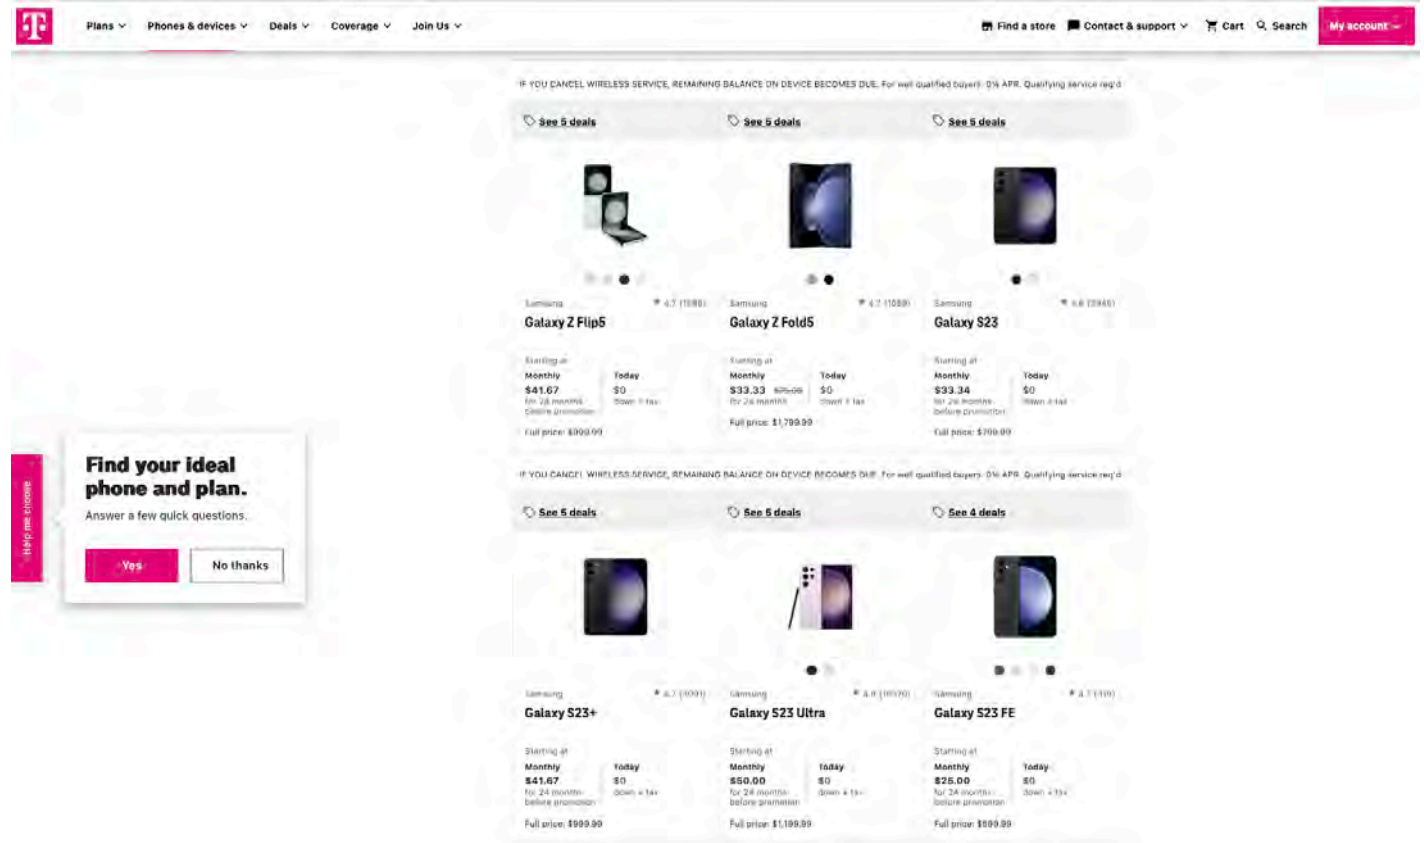

Public Documentation

The screenshot displays the T-Mobile website's 'Shop' section, specifically the 'Phones' category. The page features a navigation bar at the top with links for 'Plans', 'Phones & devices', 'Deals', 'Coverage', and 'Join Us'. A prominent pink banner across the top of the main content area reads 'Free 2-day shipping. Applied at checkout or call 844-480-9807'. On the left side, there is a 'Shop' sidebar with categories: 'Phones', 'Tablets & Devices', 'Smart watches', 'Hotspots & more', and 'Accessories'. Below this is a 'Filters' section with expandable options for 'Deals', 'Brands', 'Operating System', 'Network speed', and 'SIM type'. The main content area is titled 'Phones' and includes a 'Sort by: Featured' dropdown. A financing notice states: 'Get a fast and easy financing decision. (This won't affect your credit score.) See what I qualify for >'. Below this, there are three rows of product listings, each with a 'See 5 deals' link. The first row features the iPhone 15 Pro, iPhone 15 Pro Max, and iPhone 15. The second row features the iPhone 15 Plus, iPhone 13, and iPhone 14 Pro. Each listing includes the product name, a 'Starting at' price (Monthly and Today), and the 'Full price'. A small red banner on the left side of the page reads 'New colors'. A small red banner at the bottom right corner reads 'Want to add service?'. A disclaimer at the bottom of the page states: 'IF YOU CANCEL WIRELESS SERVICE, REMAINING BALANCE ON DEVICE BECOMES DUE. For well qualified buyers. 0% APR. Qualifying service req'd.'

Product	Starting at (Monthly)	Starting at (Today)	Full price
iPhone 15 Pro	\$41.67	\$0	\$999.99
iPhone 15 Pro Max	\$50.00	\$0	\$1,199.99
iPhone 15	\$34.59	\$0	\$629.99
iPhone 15 Plus	\$38.75	\$0	\$829.99
iPhone 13	\$26.25	\$0	\$629.99
iPhone 14 Pro	\$37.50	\$99.99	\$999.99

App Standby Buckets

Android 9 (API level 28) and higher support **App Standby Buckets**. App Standby Buckets help the system prioritize apps' requests for resources based on how recently and how frequently the apps are used. Based on app usage patterns, each app is placed in one of five priority **buckets**. The system limits the device resources available to each app based on which bucket the app is in.

Priority buckets

The system dynamically assigns each app to a priority bucket, reassigning the apps as needed. The system may rely on a preloaded app that uses machine learning to determine how likely each app is to be used, and assigns apps to the appropriate buckets. If the system app is not present on a device, the system defaults to sorting apps based on how recently they were used. More active apps are assigned to buckets that give the apps higher priority, making more system resources available to the app. In particular, the bucket determines how frequently the app's jobs run, and how often the app can trigger alarms. These restrictions apply only while the device is on battery power; the system does not impose these restrictions on apps while the device is charging.

★ **Note:** Every manufacturer can set their own criteria for how non-active apps are assigned to buckets. You should not try to influence which bucket your app is assigned to. Instead, focus on making sure your app behaves well in whatever bucket it might be in. Your app can find out what bucket it's currently in by calling `UsageStatsManager.getAppStandbyBucket()`.

The buckets are:

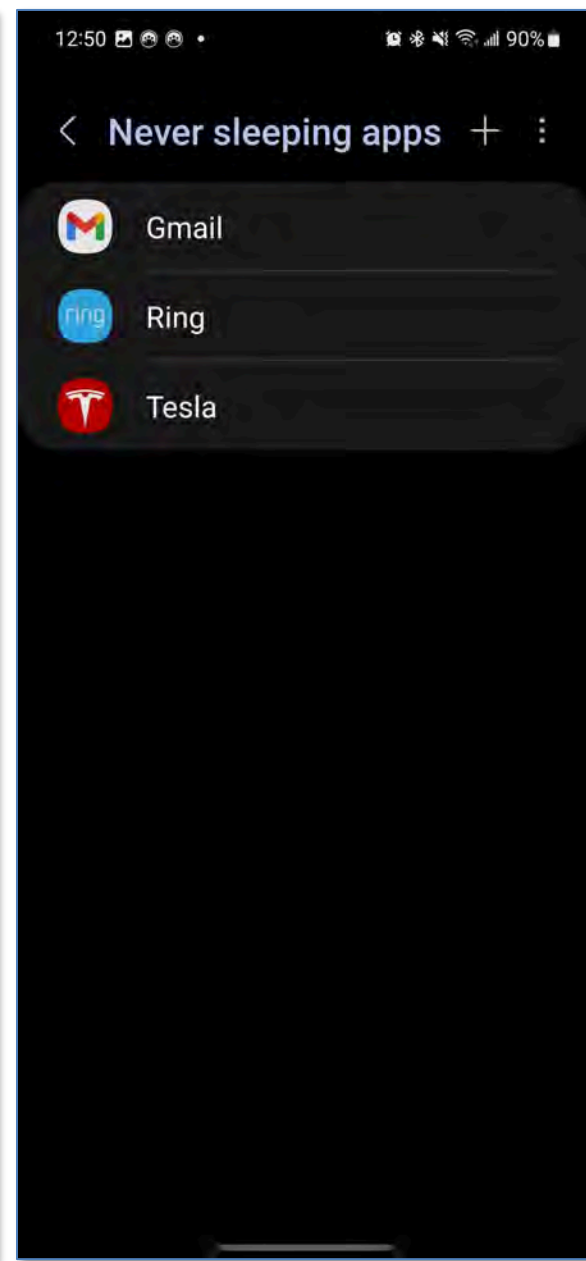

1. **Active:** App is currently being used or was very recently used.
2. **Working set:** App is in regular use.
3. **Frequent:** App is often used, but not every day.
4. **Rare:** App is not frequently used.
5. **Restricted:** App consumes a great deal of system resources, or may exhibit undesirable behavior.

In addition, there's a special **never** bucket for apps that have been installed but have never been run. The system imposes severe restrictions on these apps.

Use Low Power Mode to save battery life on your iPhone or iPad

Low Power Mode reduces the amount of power that your iPhone or iPad uses when the battery gets low.

To turn Low Power Mode on or off, go to Settings > Battery. You can also turn Low Power Mode on and off from Control Center. Go to Settings > Control Center > Customize Controls, then select Low Power Mode to add it to Control Center.

When Low Power Mode is on, your iPhone or iPad will last longer before you need to charge it, but some features might take longer to update or complete. Also, some tasks might not work until you turn off Low Power Mode, or until you charge your iPhone or iPad to 80% or higher.

Low Power Mode reduces or affects these features:

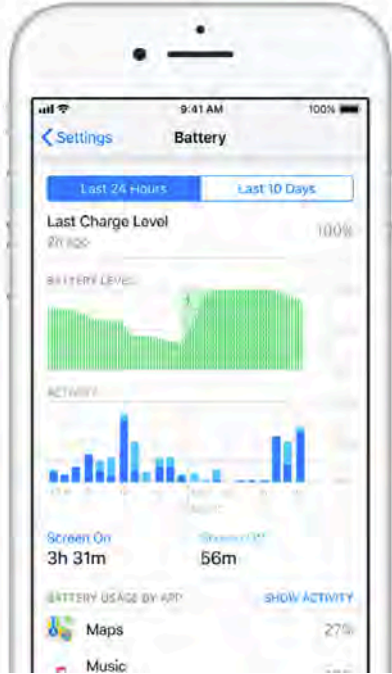

- 5G (except for video streaming) on iPhone 12 and iPhone 13 models¹
- Auto-Lock (defaults to 30 seconds)
- Display brightness
- Display refresh rate (limited up to 60 Hz) on iPhone and iPad models with ProMotion display²
- Some visual effects
- iCloud Photos (temporarily paused)
- Automatic downloads
- Email fetch
- Background app refresh

When Low Power Mode is on, the battery in the status bar will be yellow. You'll see a yellow battery icon  and the battery percentage. After you charge your iPhone or iPad to 80% or higher, Low Power Mode automatically turns off.

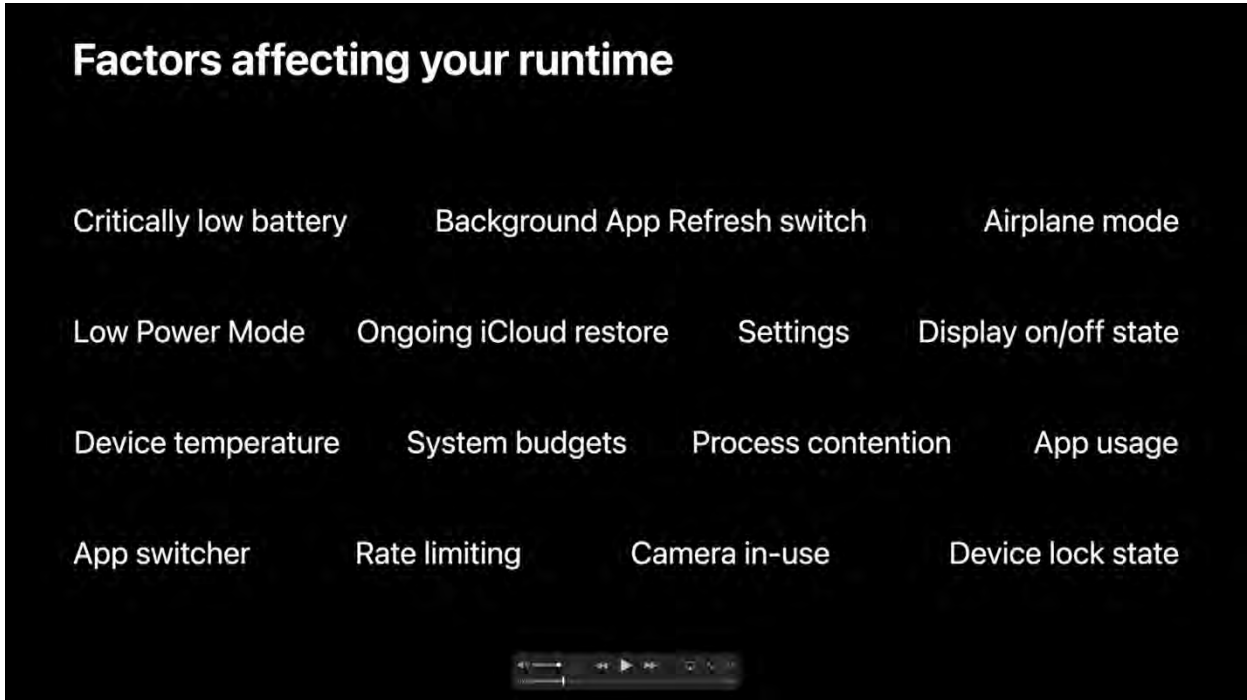

1. If you turn on Low Power Mode, 5G is disabled, except in some cases like video streaming and large downloads on iPhone 12 and iPhone 13 models. With iPhone 12 models, Low Power Mode disables 5G standalone (where available).

2. These devices have ProMotion display: iPhone 13 Pro and later, iPhone 13 Pro Max and later, iPad Pro 10.5-inch, all iPad Pro 11-inch models, and iPad Pro 12.9-inch (2nd generation) and later.

Priority buckets

The system dynamically assigns each app to a priority bucket, reassigning the apps as needed. The system may rely on a preloaded app that uses machine learning to determine how likely each app is to be used, and assigns apps to the appropriate buckets. If the system app is not present on a device, the system defaults to sorting apps based on how recently they were used. More active apps are assigned to buckets that give the apps higher priority, making more system resources available to the app. In particular, the bucket determines how frequently the app's jobs run, and how often the app can trigger alarms. These restrictions apply only while the device is on battery power; the system does not impose these restrictions on apps while the device is charging.

★ **Note:** Every manufacturer can set their own criteria for how non-active apps are assigned to buckets. You should not try to influence which bucket your app is assigned to. Instead, focus on making sure your app behaves well in whatever bucket it might be in. Your app can find out what bucket it's currently in by calling `UsageStatsManager.getAppStandbyBucket()`.

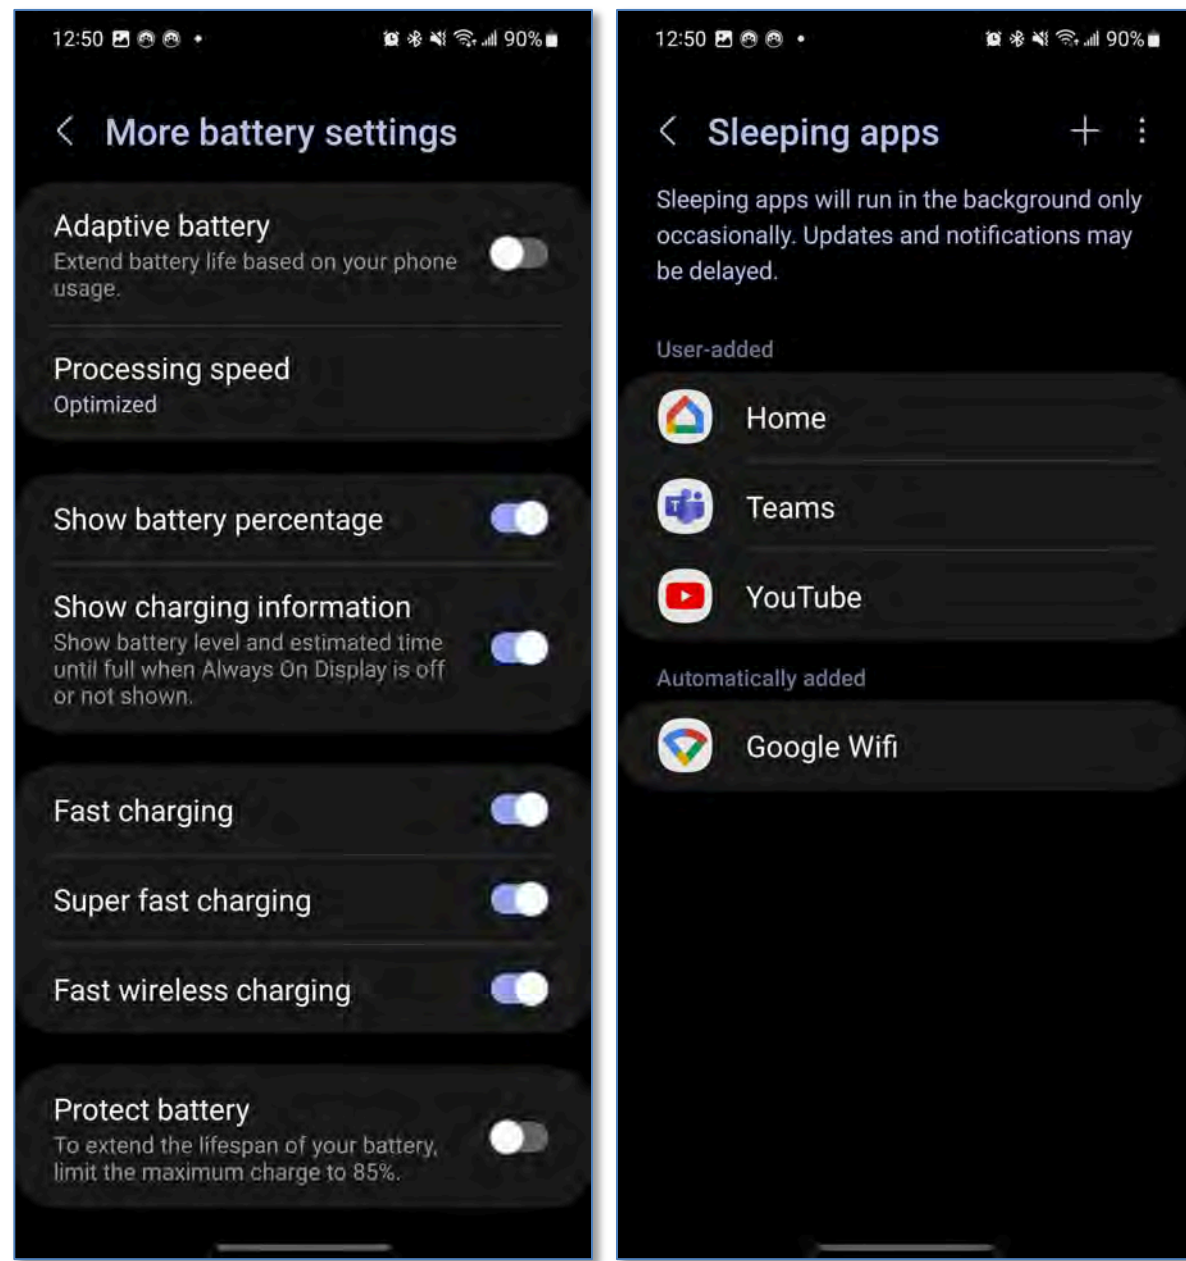

The buckets are:

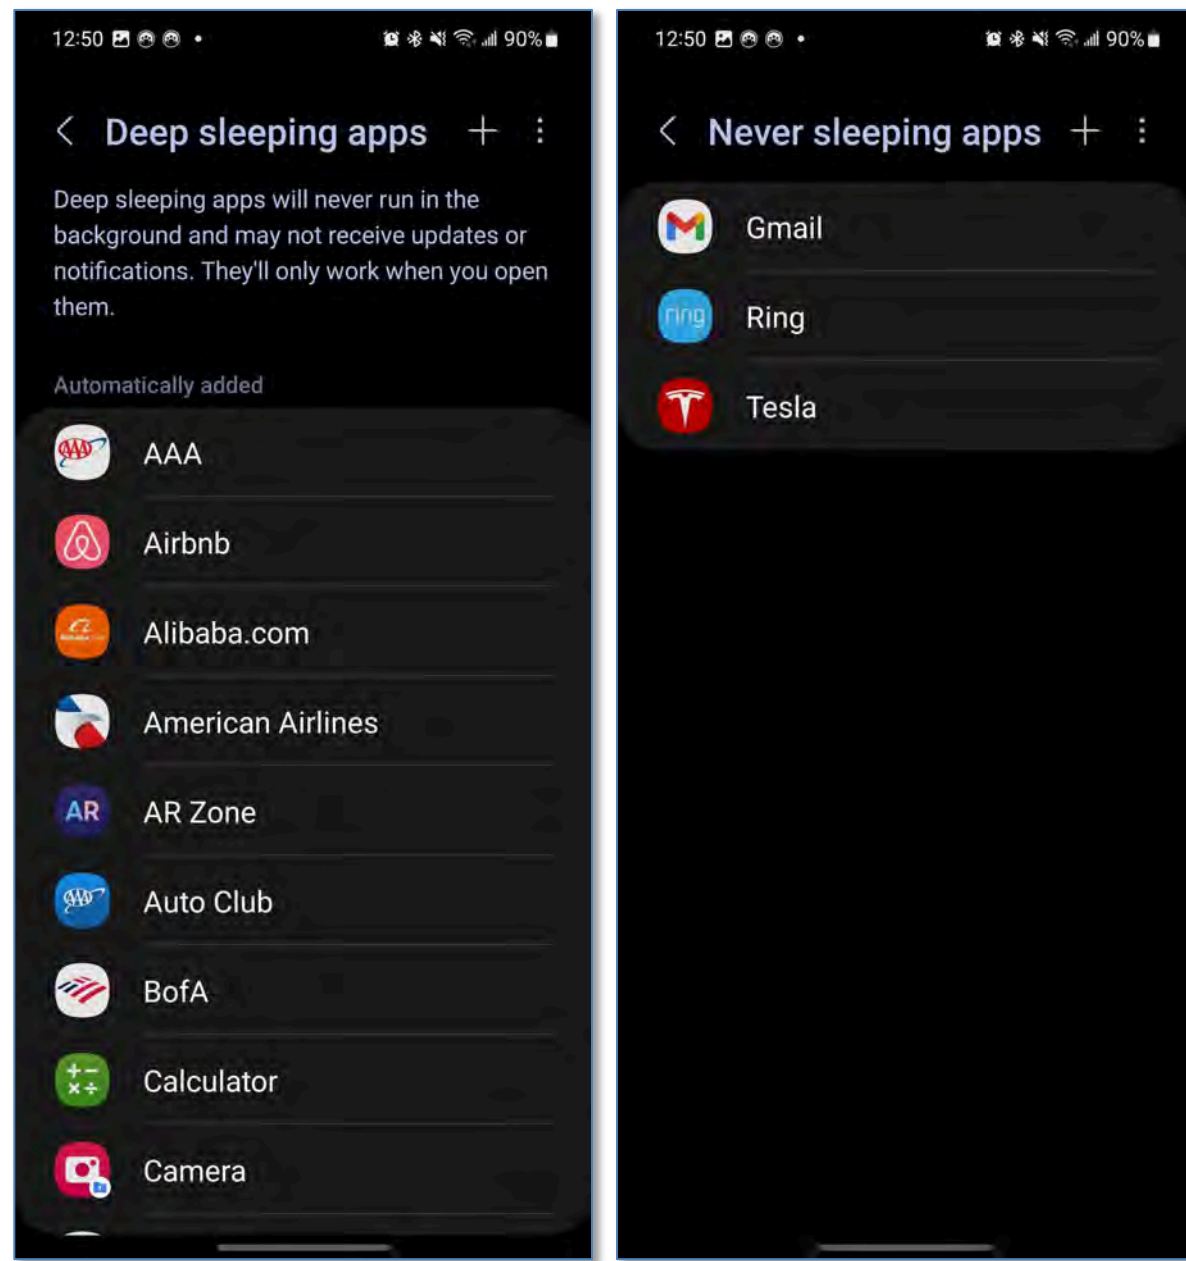

1. **Active:** App is currently being used or was very recently used.
2. **Working set:** App is in regular use.
3. **Frequent:** App is often used, but not every day.
4. **Rare:** App is not frequently used.
5. **Restricted:** App consumes a great deal of system resources, or may exhibit undesirable behavior.

In addition, there's a special **never** bucket for apps that have been installed but have never been run. The system imposes severe restrictions on these apps.

Use Low Power Mode to save battery life on your iPhone or iPad

Low Power Mode reduces the amount of power that your iPhone or iPad uses when the battery gets low.

To turn Low Power Mode on or off, go to Settings > Battery. You can also turn Low Power Mode on and off from Control Center. Go to Settings > Control Center > Customize Controls, then select Low Power Mode to add it to Control Center.

When Low Power Mode is on, your iPhone or iPad will last longer before you need to charge it, but some features might take longer to update or complete. Also, some tasks might not work until you turn off Low Power Mode, or until you charge your iPhone or iPad to 80% or higher.

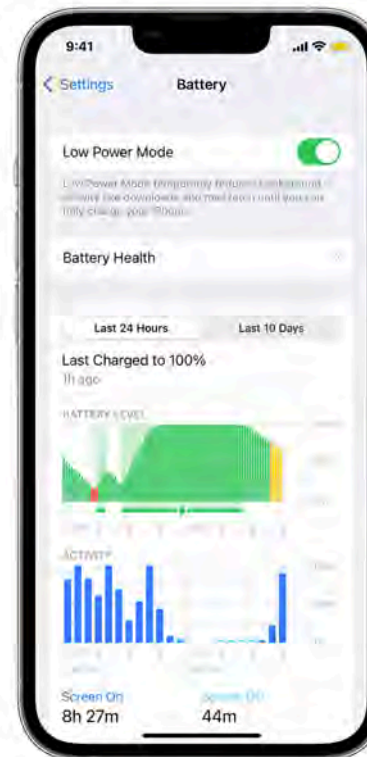

Low Power Mode reduces or affects these features:

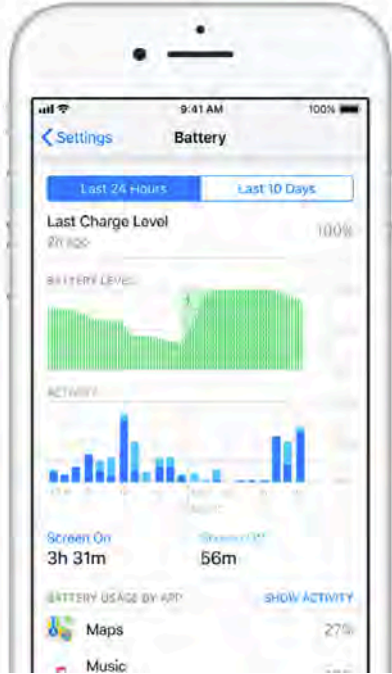

- 5G (except for video streaming) on iPhone 12 and iPhone 13 models¹
- Auto-Lock (defaults to 30 seconds)
- Display brightness
- Display refresh rate (limited up to 60 Hz) on iPhone and iPad models with ProMotion display²
- Some visual effects
- iCloud Photos (temporarily paused)
- Automatic downloads
- Email fetch
- Background app refresh

When Low Power Mode is on, the battery in the status bar will be yellow. You'll see a yellow battery icon  and the battery percentage. After you charge your iPhone or iPad to 80% or higher, Low Power Mode automatically turns off.

1. If you turn on Low Power Mode, 5G is disabled, except in some cases like video streaming and large downloads on iPhone 12 and iPhone 13 models. With iPhone 12 models, Low Power Mode disables 5G standalone (where available).

2. These devices have ProMotion display: iPhone 13 Pro and later, iPhone 13 Pro Max and later, iPad Pro 10.5-inch, all iPad Pro 11-inch models, and iPad Pro 12.9-inch (2nd generation) and later.

[1h] classify a wireless network to which the device currently connects in order to communicate data for Internet service activities as at least one of a plurality of network types that the device can connect with,

The Accused Instrumentalities “classify a wireless network to which the device currently connects in order to communicate data for Internet service activities as at least one of a plurality of network types that the device can connect with.”

For example, devices sold and used by T-Mobile classify wireless network connections for communicating internet service activities. *See, e.g.,* <https://developer.android.com/reference/android/net/ConnectivityManager>:

ConnectivityManager

Added in API level 1

Kotlin Java

```
public class ConnectivityManager  
    extends Object
```

```
java.lang.Object  
↳ android.net.ConnectivityManager
```

Class that answers queries about the state of network connectivity. It also notifies applications when network connectivity changes.

The primary responsibilities of this class are to:

1. Monitor network connections (Wi-Fi, GPRS, UMTS, etc.)
2. Send broadcast intents when network connectivity changes
3. Attempt to "fail over" to another network when connectivity to a network is lost
4. Provide an API that allows applications to query the coarse-grained or fine-grained state of the available networks
5. Provide an API that allows applications to request and select networks for their data traffic

<https://developer.android.com/training/monitoring-device-state/connectivity-status-type>; <https://www.samsung.com/us/support/answer/ANS00079018/>; <https://www.samsung.com/ae/support/mobile-devices/android-pie-what-is-the-data-saver-feature/>; <https://www.samsung.com/us/support/answer/ANS00078987/>; <https://developer.android.com/training/basics/network-ops/data-saver>; <https://developer.android.com/training/monitoring-device-state/doze-standby>; <https://developer.android.com/topic/performance/appstandby>;

App Standby Buckets

Android 9 (API level 28) and higher support **App Standby Buckets**. App Standby Buckets help the system prioritize apps' requests for resources based on how recently and how frequently the apps are used. Based on app usage patterns, each app is placed in one of five priority **buckets**. The system limits the device resources available to each app based on which bucket the app is in.

Priority buckets

The system dynamically assigns each app to a priority bucket, reassigning the apps as needed. The system may rely on a preloaded app that uses machine learning to determine how likely each app is to be used, and assigns apps to the appropriate buckets. If the system app is not present on a device, the system defaults to sorting apps based on how recently they were used. More active apps are assigned to buckets that give the apps higher priority, making more system resources available to the app. In particular, the bucket determines how frequently the app's jobs run, and how often the app can trigger alarms. These restrictions apply only while the device is on battery power; the system does not impose these restrictions on apps while the device is charging.

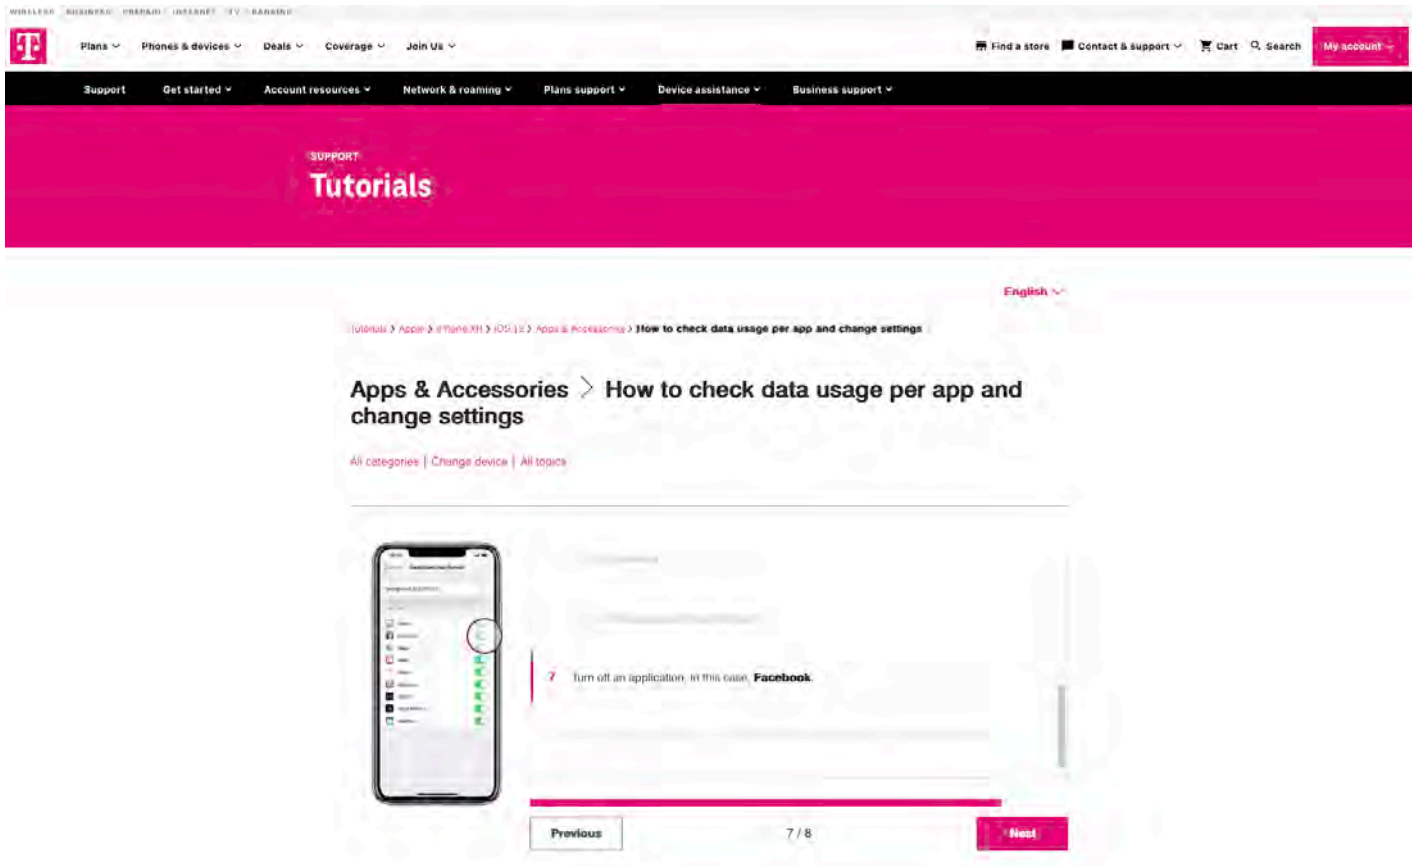

★ **Note:** Every manufacturer can set their own criteria for how non-active apps are assigned to buckets. You should not try to influence which bucket your app is assigned to. Instead, focus on making sure your app behaves well in whatever bucket it might be in. Your app can find out what bucket it's currently in by calling `UsageStatsManager.getAppStandbyBucket()`.

The buckets are:

1. **Active:** App is currently being used or was very recently used.
2. **Working set:** App is in regular use.
3. **Frequent:** App is often used, but not every day.
4. **Rare:** App is not frequently used.
5. **Restricted:** App consumes a great deal of system resources, or may exhibit undesirable behavior.

In addition, there's a special **never** bucket for apps that have been installed but have never been run. The system imposes severe restrictions on these apps.

Claim	Public Documentation
	<p data-bbox="590 256 1814 370">  Note: Unlike other buckets, these power management restrictions apply to the restricted bucket even when the device is charging. Use Low Power Mode to save battery life on your iPhone or iPad

Low Power Mode reduces the amount of power that your iPhone or iPad uses when the battery gets low.

To turn Low Power Mode on or off, go to Settings > Battery. You can also turn Low Power Mode on and off from Control Center. Go to Settings > Control Center > Customize Controls, then select Low Power Mode to add it to Control Center.

When Low Power Mode is on, your iPhone or iPad will last longer before you need to charge it, but some features might take longer to update or complete. Also, some tasks might not work until you turn off Low Power Mode, or until you charge your iPhone or iPad to 80% or higher.

Low Power Mode reduces or affects these features:

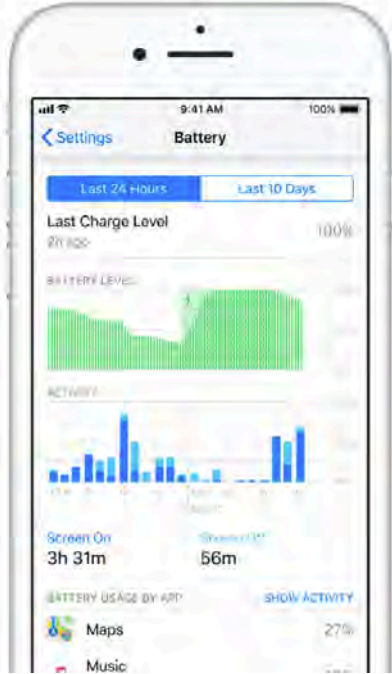

- 5G (except for video streaming) on iPhone 12 and iPhone 13 models¹
- Auto-Lock (defaults to 30 seconds)
- Display brightness
- Display refresh rate (limited up to 60 Hz) on iPhone and iPad models with ProMotion display²
- Some visual effects
- iCloud Photos (temporarily paused)
- Automatic downloads
- Email fetch
- Background app refresh

When Low Power Mode is on, the battery in the status bar will be yellow. You'll see a yellow battery icon  and the battery percentage. After you charge your iPhone or iPad to 80% or higher, Low Power Mode automatically turns off.

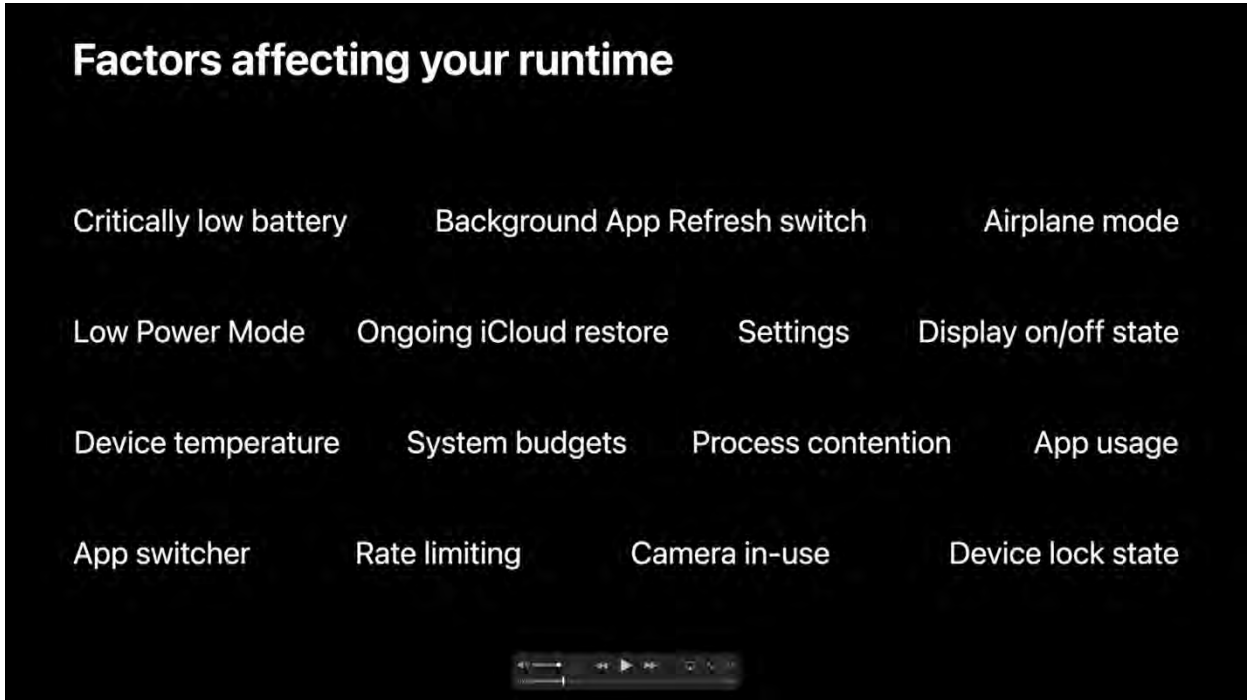

1. If you turn on Low Power Mode, 5G is disabled, except in some cases like video streaming and large downloads on iPhone 12 and iPhone 13 models. With iPhone 12 models, Low Power Mode disables 5G standalone (where available).

2. These devices have ProMotion display: iPhone 13 Pro and later, iPhone 13 Pro Max and later, iPad Pro 10.5-inch, all iPad Pro 11-inch models, and iPad Pro 12.9-inch (2nd generation) and later.

On Android 7.0 (API level 24) and higher, users can enable Data Saver on a device-wide basis in order to optimize their device's data usage, and use less data. This ability is especially useful when roaming, near the end of the billing cycle, or for a small prepaid data pack.</p> <p>When a user enables Data Saver in Settings and the device is on a metered network, the system blocks background data usage and signals apps to use less data in the foreground wherever possible. Users can allow specific apps to use background metered data usage even when Data Saver is turned on.</p> <p>Android 7.0 (API level 24) extends the ConnectivityManager API to provide apps with a way to retrieve the user's Data Saver preferences and monitor preference changes. It is considered good practice for apps to check whether the user has enabled Data Saver and make an effort to limit foreground and background data usage.</p> </div>

Claim	Public Documentation
	<div data-bbox="594 245 1577 797"> <p>Check data saver preferences</p> <p>On Android 7.0 (API level 24) and higher, apps can use the <code>ConnectivityManager</code> API to determine what data usage restrictions are being applied. The <code>getRestrictBackgroundStatus()</code> method returns one of the following values:</p> <p><code>RESTRICT_BACKGROUND_STATUS_DISABLED</code></p> <p>Data Saver is disabled.</p> <p><code>RESTRICT_BACKGROUND_STATUS_ENABLED</code></p> <p>The user has enabled Data Saver for this app. Apps should make an effort to limit data usage in the foreground and gracefully handle restrictions to background data usage.</p> <p><code>RESTRICT_BACKGROUND_STATUS_WHITELISTED</code></p> <p>The user has enabled Data Saver but the app is allowed to bypass it. Apps should still make an effort to limit foreground and background data usage.</p> <p>Limit data usage whenever the device is connected to a metered network, even if Data Saver is disabled or the app is allowed to bypass it. The following sample code uses <code>ConnectivityManager.isActiveNetworkMetered()</code> and <code>ConnectivityManager.getRestrictBackgroundStatus()</code> to determine how much data the app should use:</p> </div> <p data-bbox="594 818 1593 850">; https://developer.android.com/training/monitoring-device-state/doze-standby;</p> <div data-bbox="594 857 1829 1354"> <h2 data-bbox="604 889 1535 948">Optimize for Doze and App Standby </h2> <p data-bbox="604 992 1808 1122">Starting from Android 6.0 (API level 23), Android introduces two power-saving features that extend battery life for users by managing how apps behave when a device is not connected to a power source. <i>Doze</i> reduces battery consumption by deferring background CPU and network activity for apps when the device is unused for long periods of time. <i>App Standby</i> defers background network activity for apps with which the user has not recently interacted.</p> <p data-bbox="604 1149 1787 1214">While the device is in Doze, apps' access to certain battery-intensive resources is deferred until maintenance windows. The specific restrictions are listed in Power Management Restrictions.</p> <p data-bbox="604 1242 1766 1333">Doze and App Standby manage the behavior of all apps running on Android 6.0 or higher, regardless whether they are specifically targeting API level 23. To ensure the best experience for users, test your app in Doze and App Standby modes and make any necessary adjustments to your code. The sections below provide details.</p> </div>

Claim	Public Documentation
	<div data-bbox="594 245 1545 870"> <h3>Understanding Doze</h3> <p>If a user leaves a device unplugged and stationary for a period of time, with the screen off, the device enters Doze mode. In Doze mode, the system attempts to conserve battery by restricting apps' access to network and CPU-intensive services. It also prevents apps from accessing the network and defers their jobs, syncs, and standard alarms.</p> <p>Periodically, the system exits Doze for a brief time to let apps complete their deferred activities. During this <i>maintenance window</i>, the system runs all pending syncs, jobs, and alarms, and lets apps access the network.</p>  <p>Figure 1. Doze provides a recurring maintenance window for apps to use the network and handle pending activities.</p> </div> <div data-bbox="594 894 1646 1065"> <p>At the conclusion of each maintenance window, the system again enters Doze, suspending network access and deferring jobs, syncs, and alarms. Over time, the system schedules maintenance windows less and less frequently, helping to reduce battery consumption in cases of longer-term inactivity when the device is not connected to a charger.</p> <p>As soon as the user wakes the device by moving it, turning on the screen, or connecting a charger, the system exits Doze and all apps return to normal activity.</p> </div> <div data-bbox="594 1089 1829 1219"> <p>The Doze restriction on network access is also likely to affect your app, especially if the app relies on real-time messages such as tickles or notifications. If your app requires a persistent connection to the network to receive messages, you should use Firebase Cloud Messaging (FCM) if possible.</p> </div> <p>; https://developer.android.com/topic/performance/appstandby:</p>

App Standby Buckets

Android 9 (API level 28) and higher support **App Standby Buckets**. App Standby Buckets help the system prioritize apps' requests for resources based on how recently and how frequently the apps are used. Based on app usage patterns, each app is placed in one of five priority **buckets**. The system limits the device resources available to each app based on which bucket the app is in.

Priority buckets

The system dynamically assigns each app to a priority bucket, reassigning the apps as needed. The system may rely on a preloaded app that uses machine learning to determine how likely each app is to be used, and assigns apps to the appropriate buckets. If the system app is not present on a device, the system defaults to sorting apps based on how recently they were used. More active apps are assigned to buckets that give the apps higher priority, making more system resources available to the app. In particular, the bucket determines how frequently the app's jobs run, and how often the app can trigger alarms. These restrictions apply only while the device is on battery power; the system does not impose these restrictions on apps while the device is charging.

★ **Note:** Every manufacturer can set their own criteria for how non-active apps are assigned to buckets. You should not try to influence which bucket your app is assigned to. Instead, focus on making sure your app behaves well in whatever bucket it might be in. Your app can find out what bucket it's currently in by calling `UsageStatsManager.getAppStandbyBucket()`.

The buckets are:

1. **Active:** App is currently being used or was very recently used.
2. **Working set:** App is in regular use.
3. **Frequent:** App is often used, but not every day.
4. **Rare:** App is not frequently used.
5. **Restricted:** App consumes a great deal of system resources, or may exhibit undesirable behavior.

In addition, there's a special **never** bucket for apps that have been installed but have never been run. The system imposes severe restrictions on these apps.

A foreground process is one that is required for what the user is currently doing. Various application components can cause its containing process to be considered foreground in different ways. A process is considered to be in the foreground if any of the following conditions hold:</p> <ul style="list-style-type: none"> • It is running an Activity at the top of the screen that the user is interacting with (its onResume() method has been called). • It has a BroadcastReceiver that is currently running (its BroadcastReceiver.onReceive() method is executing). • It has a Service that is currently executing code in one of its callbacks (Service.onCreate(), Service.onStart(), or Service.onDestroy()). <p>There will only ever be a few such processes in the system, and these will only be killed as a last resort if memory is so low that not even these processes can continue to run. Generally, at this point, the device has reached a memory paging state, so this action is required in order to keep the user interface responsive.</p> </div> <p> https://developer.android.com/guide/background; </p>

Claim	Public Documentation
	<div data-bbox="594 245 1831 631">Definition of background work<p>An app is running in the <i>background</i> when both the following conditions are satisfied:</p><ul style="list-style-type: none">• None of the app's activities are currently visible to the user.• The app isn't running any <i>foreground services</i> that started while an activity from the app was visible to the user.<p>Otherwise, the app is running in the <i>foreground</i>.</p></div> <p data-bbox="594 651 1346 683">; https://developer.android.com/guide/components/services;</p>

Types of Services

These are the three different types of services:

Foreground

A foreground service performs some operation that is noticeable to the user. For example, an audio app would use a foreground service to play an audio track. Foreground services must display a [Notification](#). Foreground services continue running even when the user isn't interacting with the app.

When you use a foreground service, you must display a notification so that users are actively aware that the service is running. This notification cannot be dismissed unless the service is either stopped or removed from the foreground.

Learn more about how to configure [foreground services](#) in your app.

★ **Note:** The [WorkManager](#) API offers a flexible way of scheduling tasks, and is able to [run these jobs as foreground services](#) if needed. In many cases, using WorkManager is preferable to using foreground services directly.

Background

A background service performs an operation that isn't directly noticed by the user. For example, if an app used a service to compact its storage, that would usually be a background service.

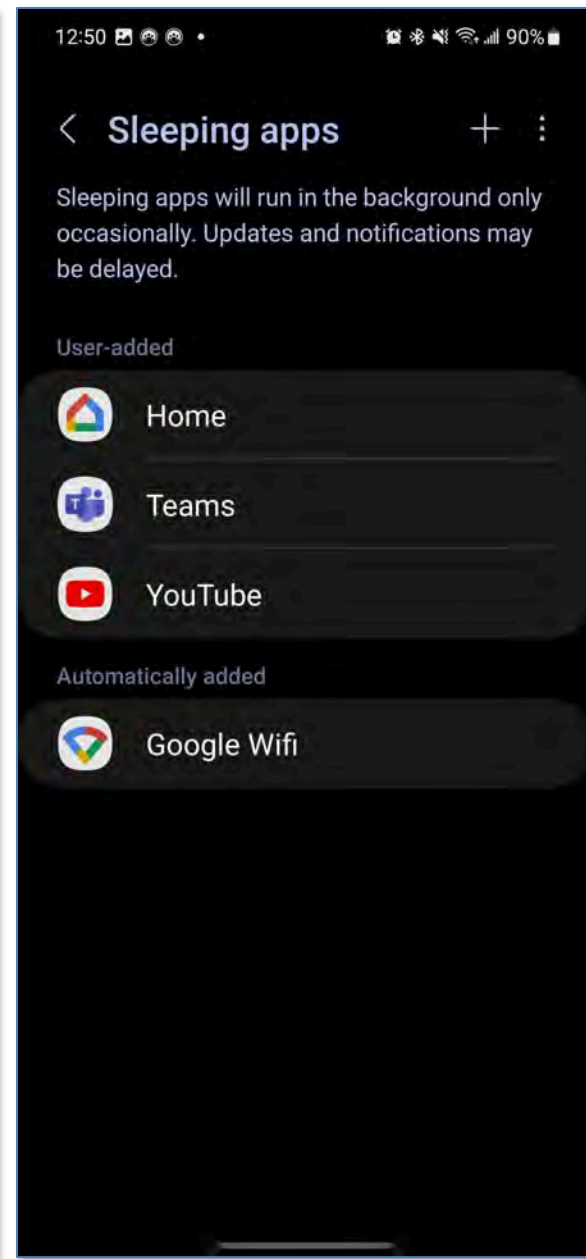

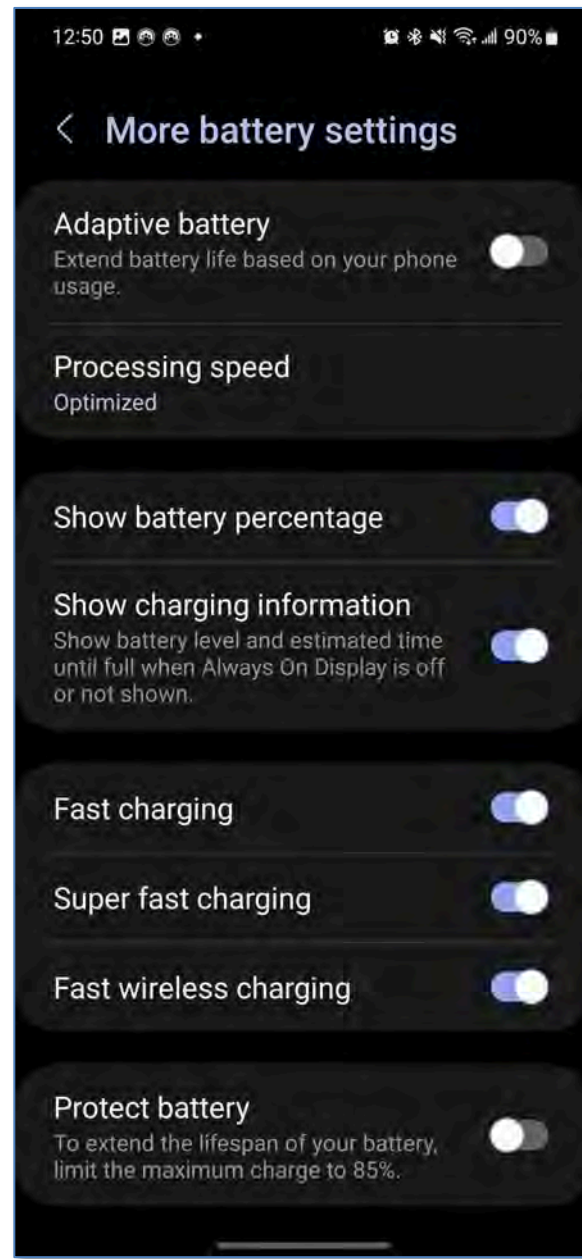

★ **Note:** If your app targets API level 26 or higher, the system imposes [restrictions on running background services](#) when the app itself isn't in the foreground. In most situations, for example, you shouldn't [access location information from the background](#). Instead, [schedule tasks using WorkManager](#).

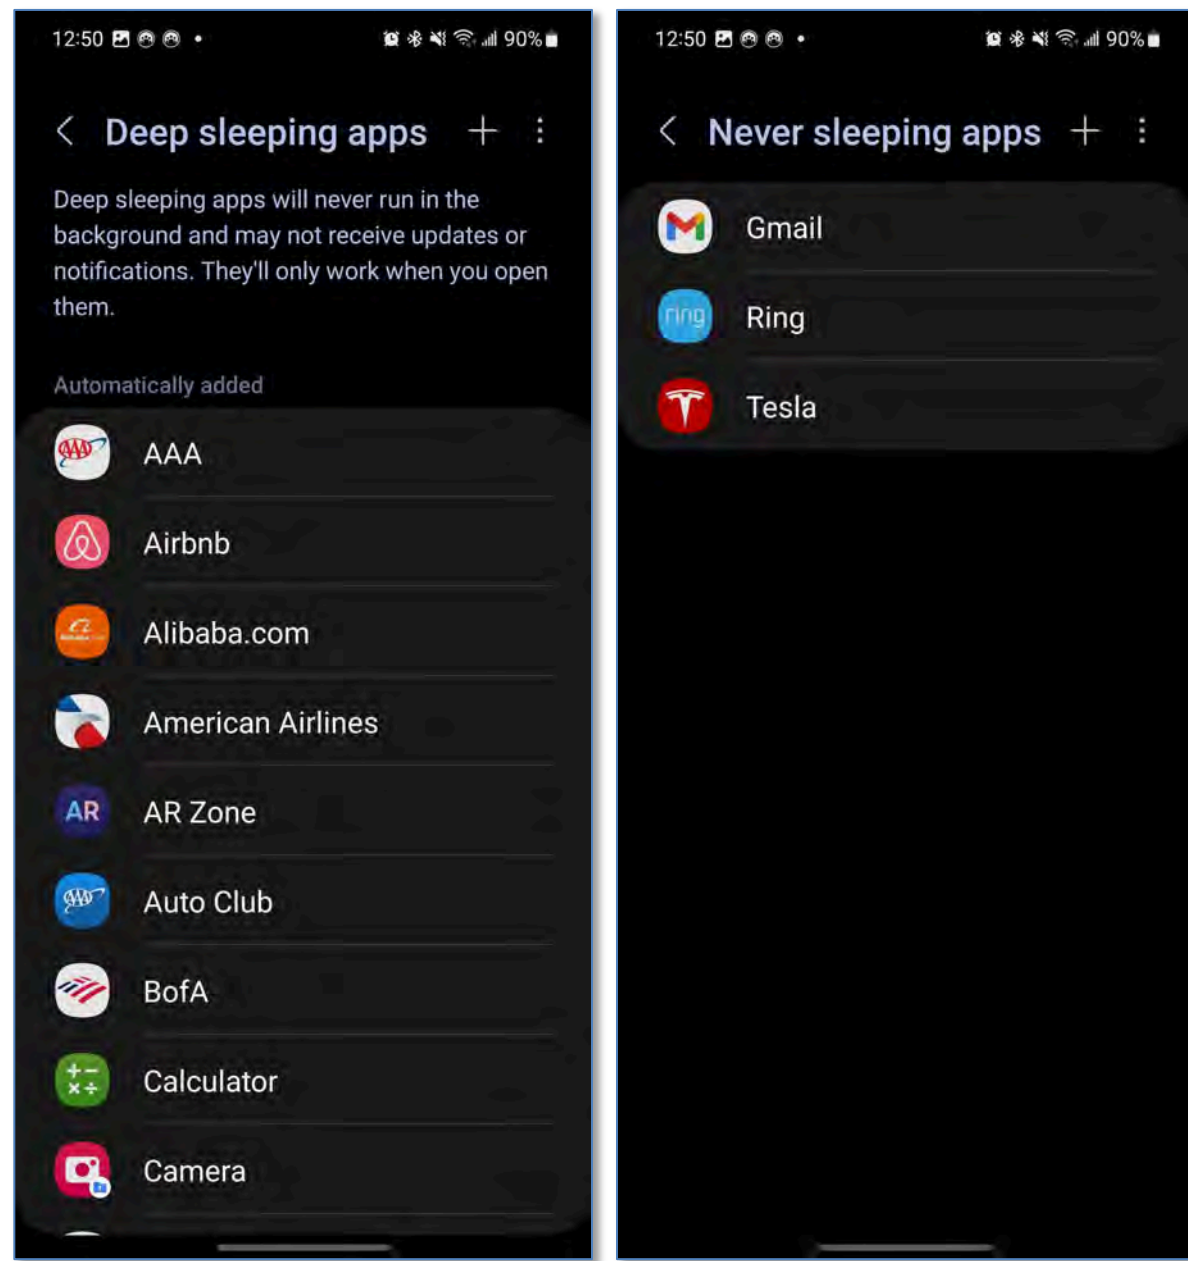

Bound

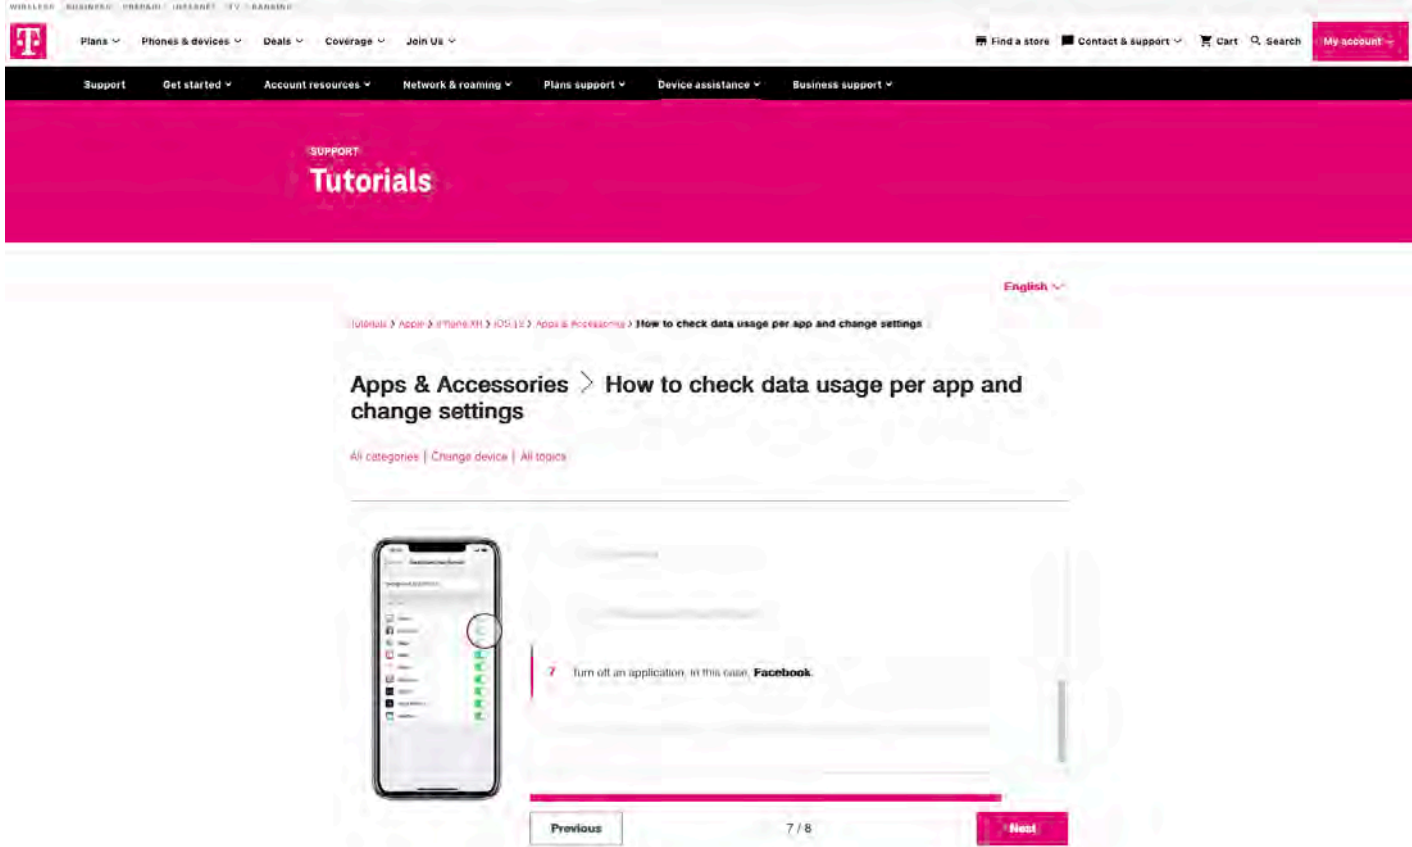

A service is *bound* when an application component binds to it by calling [bindService\(\)](#). A bound service offers a client-server interface that allows components to interact with the service, send requests, receive results, and even do so across processes with interprocess communication (IPC). A bound service runs only as long as another application component is bound to it. Multiple components can bind to the service at once, but when all of them unbind, the service is destroyed.

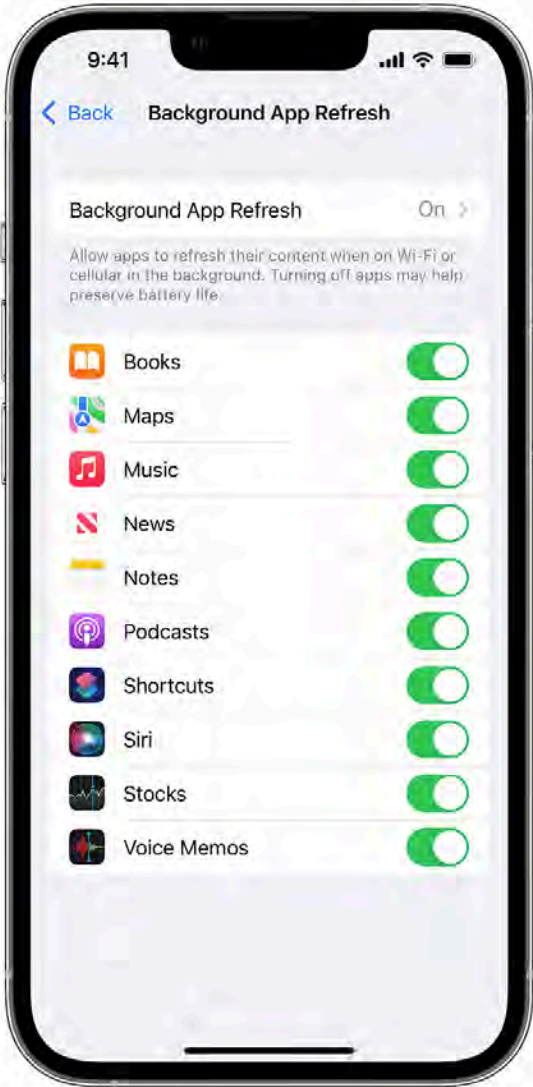

Claim	Public Documentation
	<p>; https://developer.android.com/guide/components/activities/activity-lifecycle:</p> <h3>Activity-lifecycle concepts</h3> <p>To navigate transitions between stages of the activity lifecycle, the <code>Activity</code> class provides a core set of six callbacks: <code>onCreate()</code>, <code>onStart()</code>, <code>onResume()</code>, <code>onPause()</code>, <code>onStop()</code>, and <code>onDestroy()</code>. The system invokes each of these callbacks as the activity enters a new state.</p> <p>Figure 1 presents a visual representation of this paradigm.</p> <p>As the user begins to leave the activity, the system calls methods to dismantle the activity. In some cases, the activity is only partially dismantled and still resides in memory, such as when the user switches to another app. In these cases, the activity can still come back to the foreground.</p> <p>If the user returns to the activity, it resumes from where the user left off. With a few exceptions, apps are restricted from starting activities when running in the background.</p> <p>The system's likelihood of killing a given process, along with the activities in it, depends on the state of the activity at the time. For more information on the relationship between state and vulnerability to ejection, see the section about activity state and ejection from memory.</p> <p>Depending on the complexity of your activity, you probably don't need to implement all the lifecycle methods. However, it's important that you understand each one and implement those that make your app behave the way users expect.</p> <div data-bbox="1234 540 1803 1268"> </div> <p>Figure 1. Use Low Power Mode to save battery life on your iPhone or iPad

Low Power Mode reduces the amount of power that your iPhone or iPad uses when the battery gets low.

To turn Low Power Mode on or off, go to Settings > Battery. You can also turn Low Power Mode on and off from Control Center. Go to Settings > Control Center > Customize Controls, then select Low Power Mode to add it to Control Center.

When Low Power Mode is on, your iPhone or iPad will last longer before you need to charge it, but some features might take longer to update or complete. Also, some tasks might not work until you turn off Low Power Mode, or until you charge your iPhone or iPad to 80% or higher.

Low Power Mode reduces or affects these features:

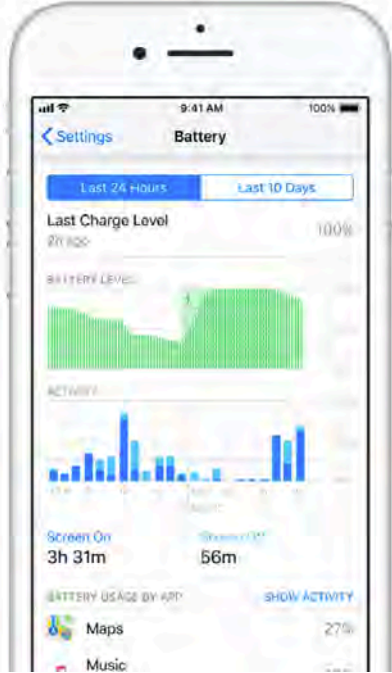

- 5G (except for video streaming) on iPhone 12 and iPhone 13 models¹
- Auto-Lock (defaults to 30 seconds)
- Display brightness
- Display refresh rate (limited up to 60 Hz) on iPhone and iPad models with ProMotion display²
- Some visual effects
- iCloud Photos (temporarily paused)
- Automatic downloads
- Email fetch
- Background app refresh

When Low Power Mode is on, the battery in the status bar will be yellow. You'll see a yellow battery icon  and the battery percentage. After you charge your iPhone or iPad to 80% or higher, Low Power Mode automatically turns off.

1. If you turn on Low Power Mode, 5G is disabled, except in some cases like video streaming and large downloads on iPhone 12 and iPhone 13 models. With iPhone 12 models, Low Power Mode disables 5G standalone (where available).

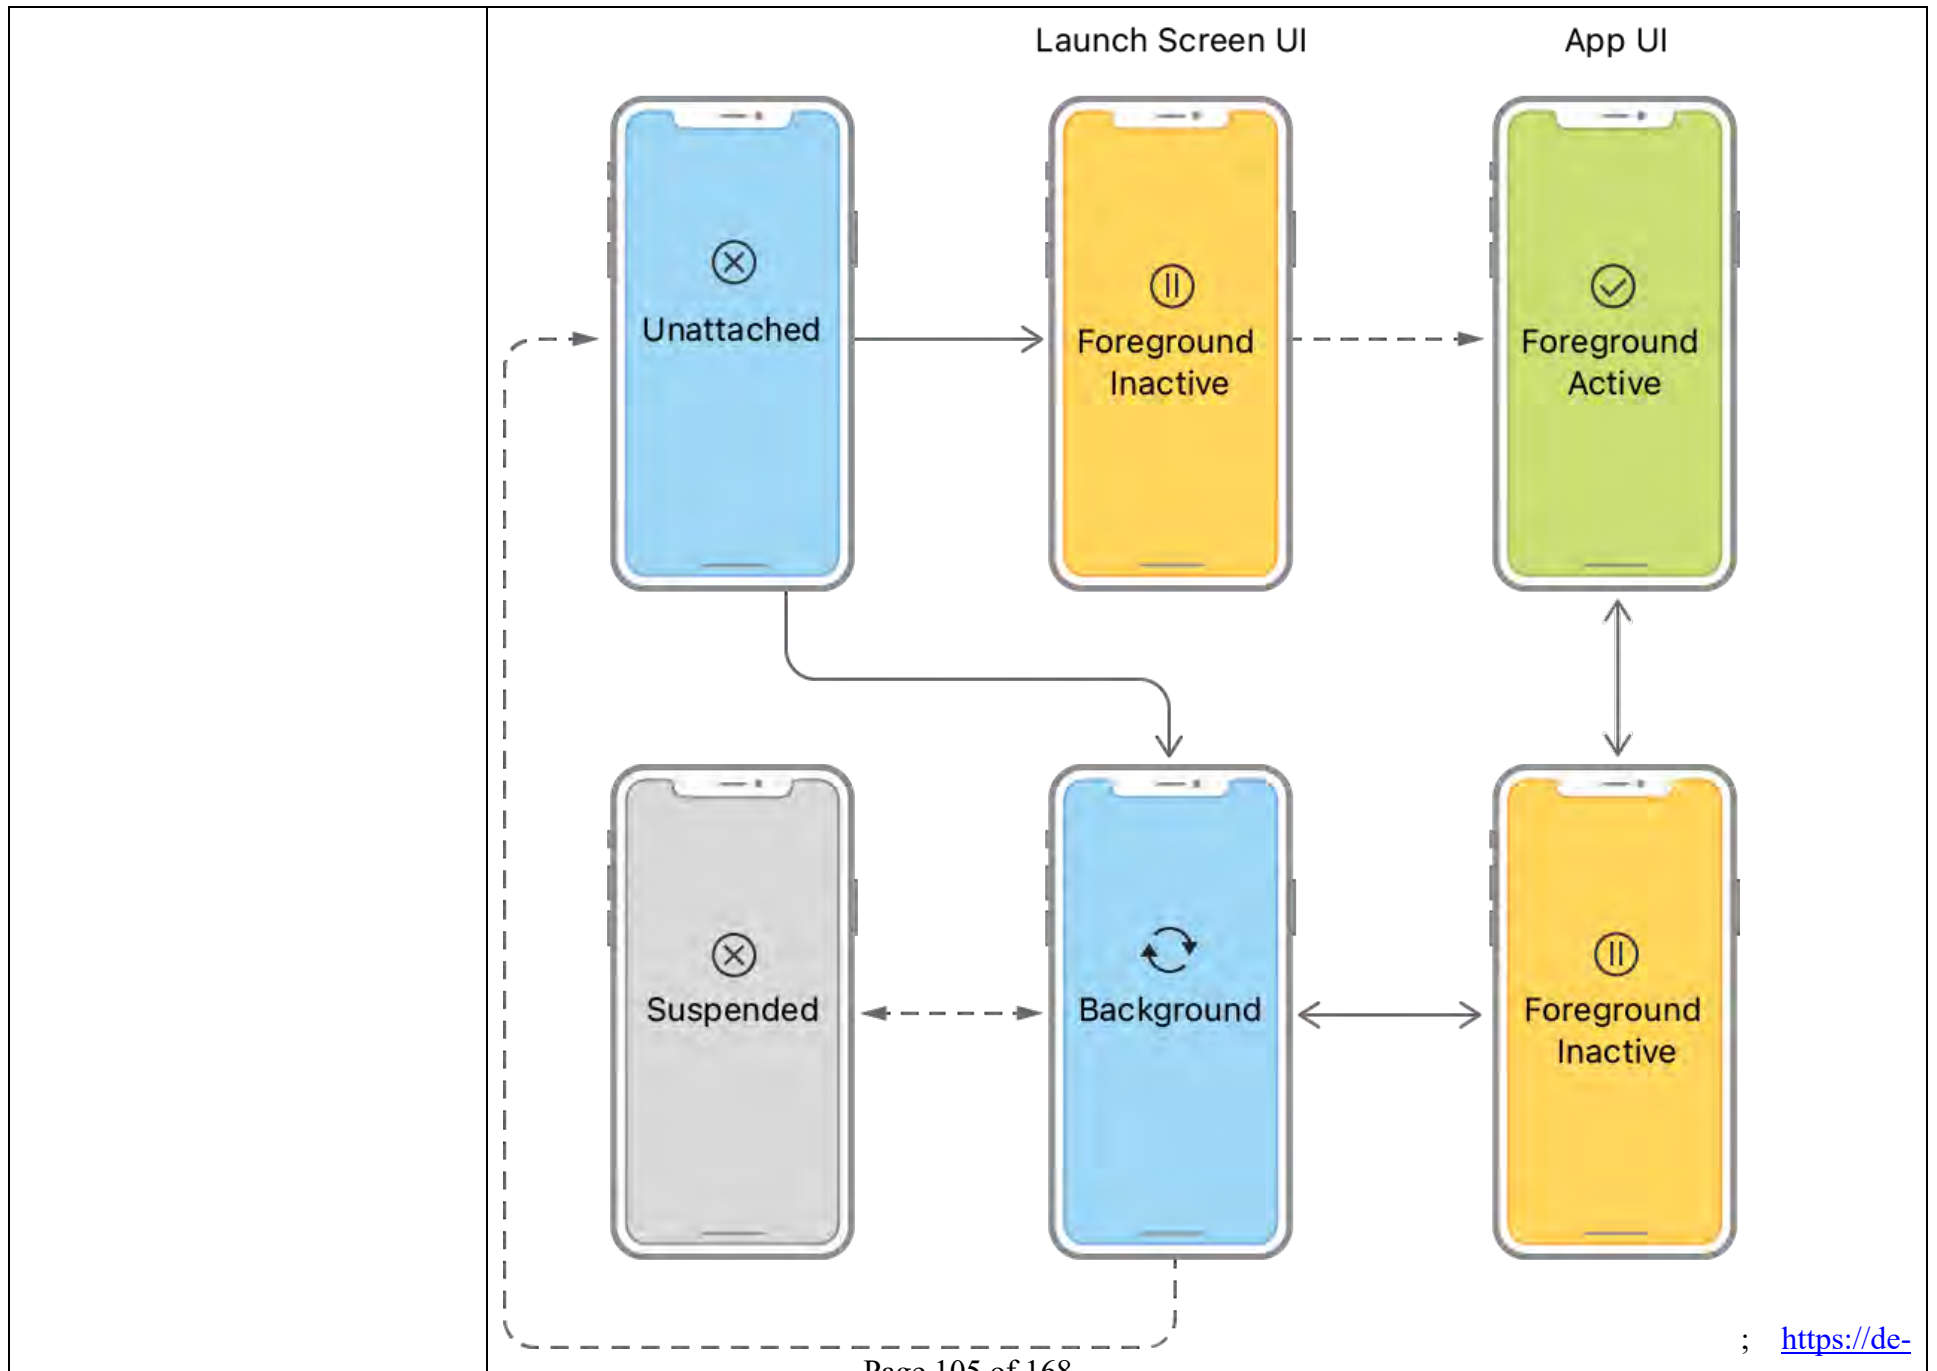

2. These devices have ProMotion display: iPhone 13 Pro and later, iPhone 13 Pro Max and later, iPad Pro 10.5-inch, all iPad Pro 11-inch models, and iPad Pro 12.9-inch (2nd generation) and later.

On Android 7.0 (API level 24) and higher, users can enable Data Saver on a device-wide basis in order to optimize their device's data usage, and use less data. This ability is especially useful when roaming, near the end of the billing cycle, or for a small prepaid data pack.</p> <p>When a user enables Data Saver in Settings and the device is on a metered network, the system blocks background data usage and signals apps to use less data in the foreground wherever possible. Users can allow specific apps to use background metered data usage even when Data Saver is turned on.</p> <p>Android 7.0 (API level 24) extends the ConnectivityManager API to provide apps with a way to retrieve the user's Data Saver preferences and monitor preference changes. It is considered good practice for apps to check whether the user has enabled Data Saver and make an effort to limit foreground and background data usage.</p> </div>

Claim	Public Documentation
	<div data-bbox="594 245 1577 797"> <p>Check data saver preferences</p> <p>On Android 7.0 (API level 24) and higher, apps can use the <code>ConnectivityManager</code> API to determine what data usage restrictions are being applied. The <code>getRestrictBackgroundStatus()</code> method returns one of the following values:</p> <p><code>RESTRICT_BACKGROUND_STATUS_DISABLED</code></p> <p>Data Saver is disabled.</p> <p><code>RESTRICT_BACKGROUND_STATUS_ENABLED</code></p> <p>The user has enabled Data Saver for this app. Apps should make an effort to limit data usage in the foreground and gracefully handle restrictions to background data usage.</p> <p><code>RESTRICT_BACKGROUND_STATUS_WHITELISTED</code></p> <p>The user has enabled Data Saver but the app is allowed to bypass it. Apps should still make an effort to limit foreground and background data usage.</p> <p>Limit data usage whenever the device is connected to a metered network, even if Data Saver is disabled or the app is allowed to bypass it. The following sample code uses <code>ConnectivityManager.isActiveNetworkMetered()</code> and <code>ConnectivityManager.getRestrictBackgroundStatus()</code> to determine how much data the app should use:</p> </div> <p data-bbox="594 818 1593 850">; https://developer.android.com/training/monitoring-device-state/doze-standby;</p> <div data-bbox="594 857 1829 1354"> <h2 data-bbox="604 889 1535 948">Optimize for Doze and App Standby </h2> <p data-bbox="604 992 1808 1122">Starting from Android 6.0 (API level 23), Android introduces two power-saving features that extend battery life for users by managing how apps behave when a device is not connected to a power source. <i>Doze</i> reduces battery consumption by deferring background CPU and network activity for apps when the device is unused for long periods of time. <i>App Standby</i> defers background network activity for apps with which the user has not recently interacted.</p> <p data-bbox="604 1149 1782 1211">While the device is in Doze, apps' access to certain battery-intensive resources is deferred until maintenance windows. The specific restrictions are listed in Power Management Restrictions.</p> <p data-bbox="604 1239 1766 1336">Doze and App Standby manage the behavior of all apps running on Android 6.0 or higher, regardless whether they are specifically targeting API level 23. To ensure the best experience for users, test your app in Doze and App Standby modes and make any necessary adjustments to your code. The sections below provide details.</p> </div>

Claim	Public Documentation
	<div data-bbox="594 245 1545 870"> <h3>Understanding Doze</h3> <p>If a user leaves a device unplugged and stationary for a period of time, with the screen off, the device enters Doze mode. In Doze mode, the system attempts to conserve battery by restricting apps' access to network and CPU-intensive services. It also prevents apps from accessing the network and defers their jobs, syncs, and standard alarms.</p> <p>Periodically, the system exits Doze for a brief time to let apps complete their deferred activities. During this <i>maintenance window</i>, the system runs all pending syncs, jobs, and alarms, and lets apps access the network.</p>  <p>Figure 1. Doze provides a recurring maintenance window for apps to use the network and handle pending activities.</p> </div> <div data-bbox="594 894 1646 1065"> <p>At the conclusion of each maintenance window, the system again enters Doze, suspending network access and deferring jobs, syncs, and alarms. Over time, the system schedules maintenance windows less and less frequently, helping to reduce battery consumption in cases of longer-term inactivity when the device is not connected to a charger.</p> <p>As soon as the user wakes the device by moving it, turning on the screen, or connecting a charger, the system exits Doze and all apps return to normal activity.</p> </div> <div data-bbox="594 1089 1829 1219"> <p>The Doze restriction on network access is also likely to affect your app, especially if the app relies on real-time messages such as tickles or notifications. If your app requires a persistent connection to the network to receive messages, you should use Firebase Cloud Messaging (FCM) if possible.</p> </div> <p>; https://developer.android.com/topic/performance/appstandby:</p>

App Standby Buckets

Android 9 (API level 28) and higher support **App Standby Buckets**. App Standby Buckets help the system prioritize apps' requests for resources based on how recently and how frequently the apps are used. Based on app usage patterns, each app is placed in one of five priority **buckets**. The system limits the device resources available to each app based on which bucket the app is in.

Priority buckets

The system dynamically assigns each app to a priority bucket, reassigning the apps as needed. The system may rely on a preloaded app that uses machine learning to determine how likely each app is to be used, and assigns apps to the appropriate buckets. If the system app is not present on a device, the system defaults to sorting apps based on how recently they were used. More active apps are assigned to buckets that give the apps higher priority, making more system resources available to the app. In particular, the bucket determines how frequently the app's jobs run, and how often the app can trigger alarms. These restrictions apply only while the device is on battery power; the system does not impose these restrictions on apps while the device is charging.

★ **Note:** Every manufacturer can set their own criteria for how non-active apps are assigned to buckets. You should not try to influence which bucket your app is assigned to. Instead, focus on making sure your app behaves well in whatever bucket it might be in. Your app can find out what bucket it's currently in by calling `UsageStatsManager.getAppStandbyBucket()`.

The buckets are:

1. **Active:** App is currently being used or was very recently used.
2. **Working set:** App is in regular use.
3. **Frequent:** App is often used, but not every day.
4. **Rare:** App is not frequently used.
5. **Restricted:** App consumes a great deal of system resources, or may exhibit undesirable behavior.

In addition, there's a special **never** bucket for apps that have been installed but have never been run. The system imposes severe restrictions on these apps.

Types of Services

These are the three different types of services:

Foreground

A foreground service performs some operation that is noticeable to the user. For example, an audio app would use a foreground service to play an audio track. Foreground services must display a [Notification](#). Foreground services continue running even when the user isn't interacting with the app.

When you use a foreground service, you must display a notification so that users are actively aware that the service is running. This notification cannot be dismissed unless the service is either stopped or removed from the foreground.

Learn more about how to configure [foreground services](#) in your app.

★ **Note:** The [WorkManager](#) API offers a flexible way of scheduling tasks, and is able to [run these jobs as foreground services](#) if needed. In many cases, using WorkManager is preferable to using foreground services directly.

Background

A background service performs an operation that isn't directly noticed by the user. For example, if an app used a service to compact its storage, that would usually be a background service.

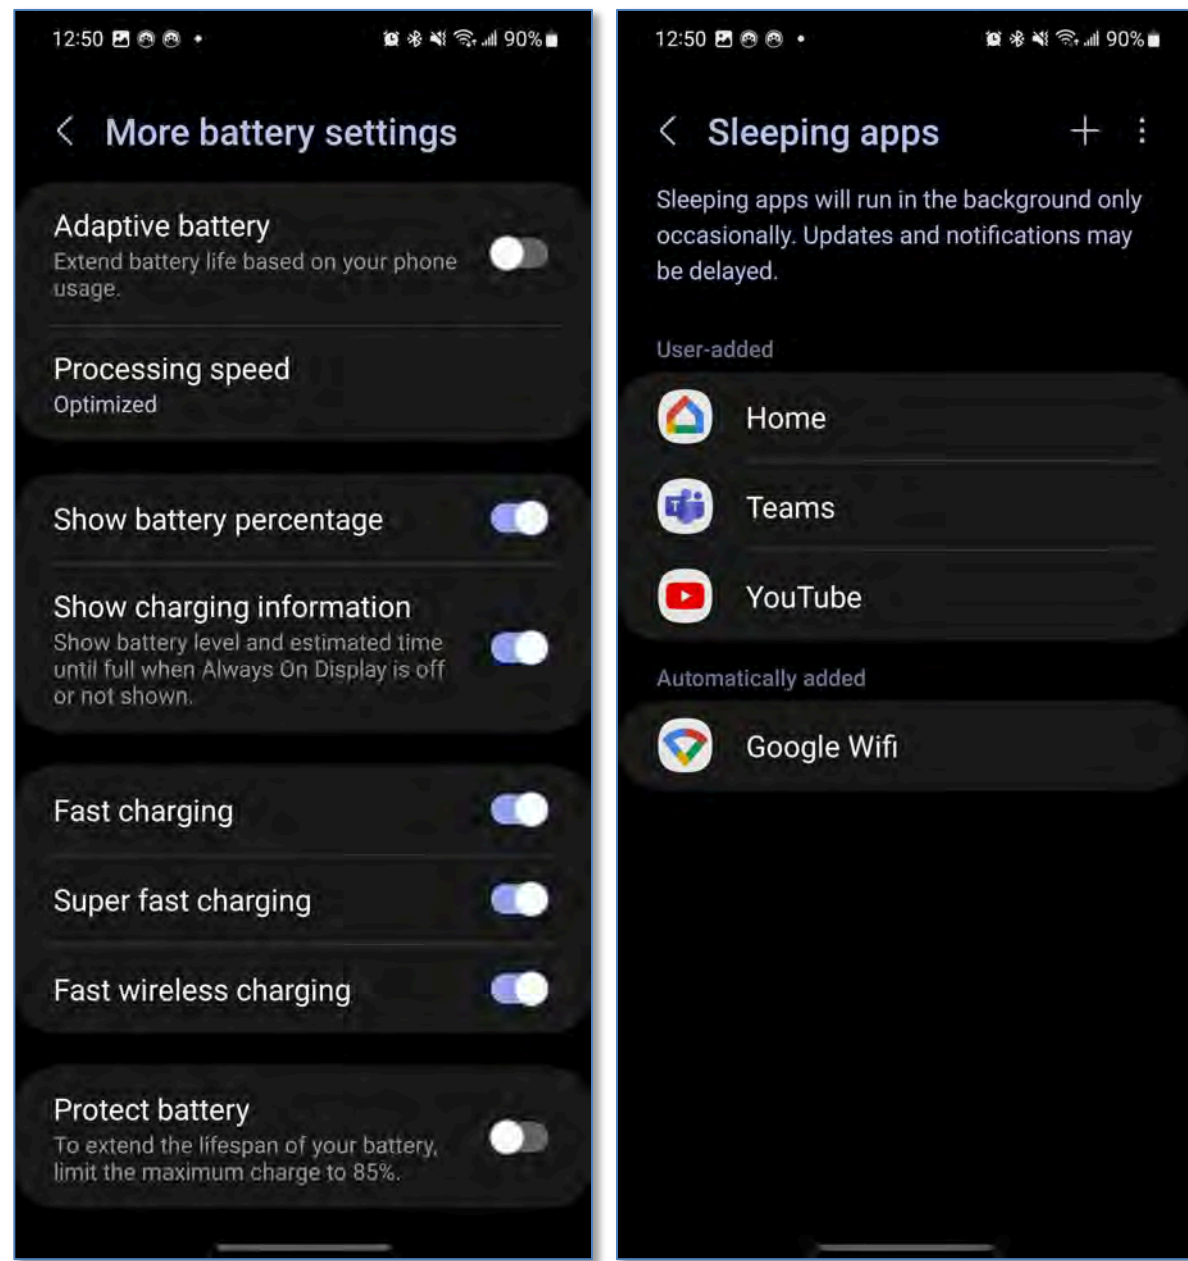

★ **Note:** If your app targets API level 26 or higher, the system imposes [restrictions on running background services](#) when the app itself isn't in the foreground. In most situations, for example, you shouldn't [access location information from the background](#). Instead, [schedule tasks using WorkManager](#).

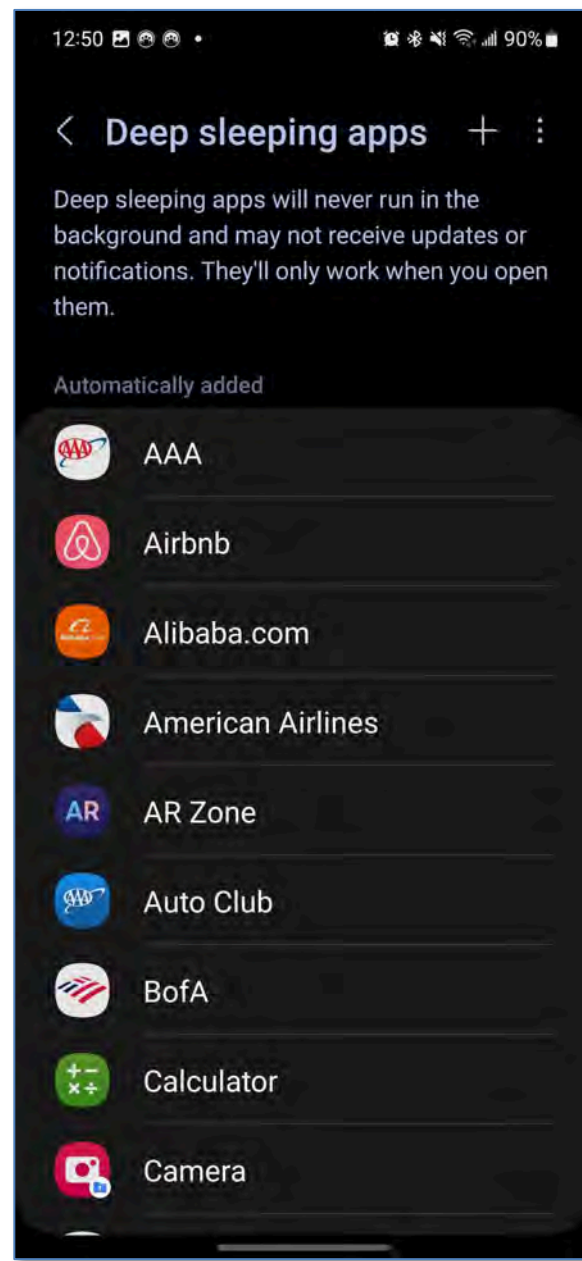

Bound

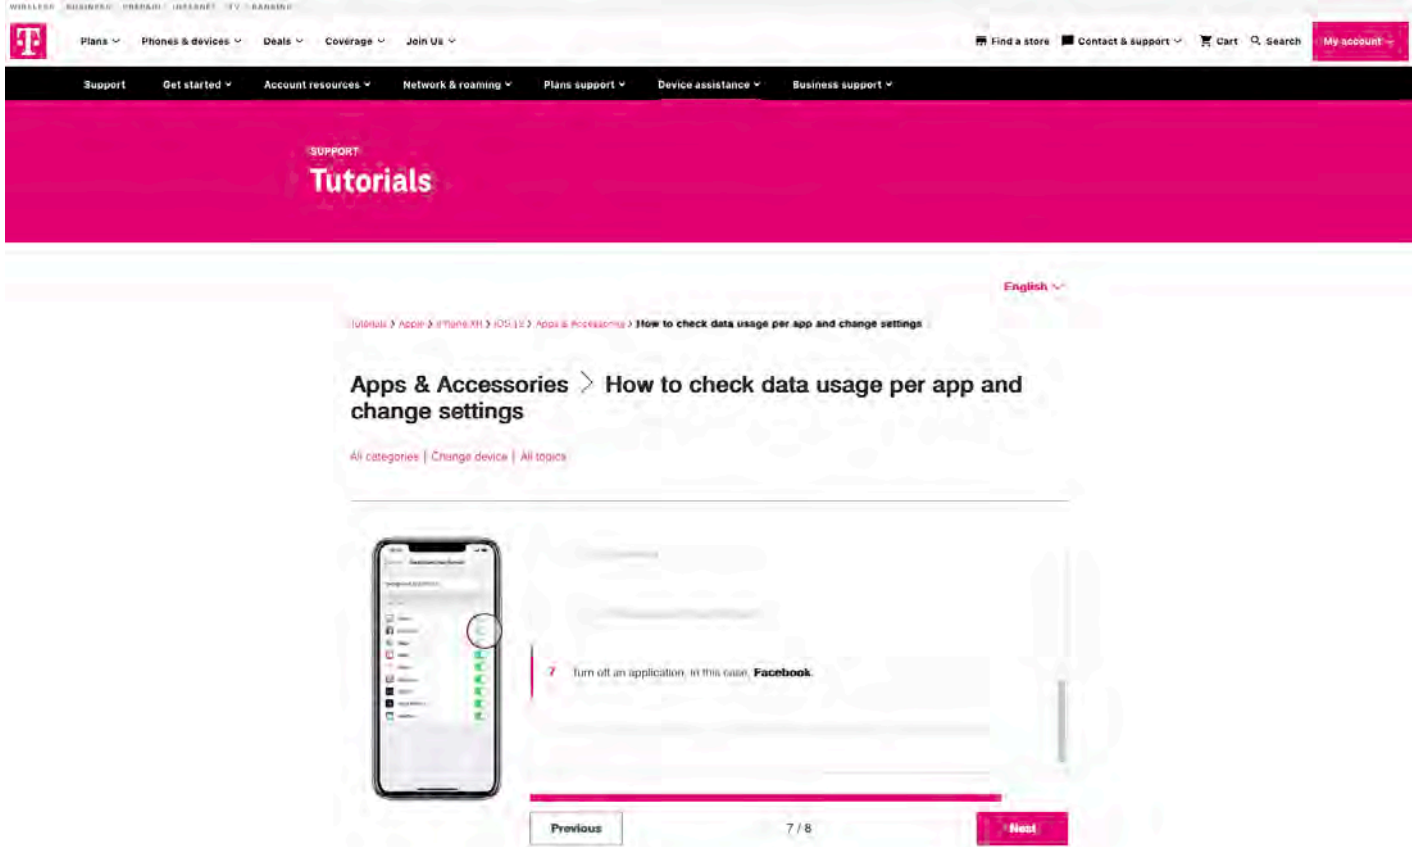

A service is *bound* when an application component binds to it by calling [bindService\(\)](#). A bound service offers a client-server interface that allows components to interact with the service, send requests, receive results, and even do so across processes with interprocess communication (IPC). A bound service runs only as long as another application component is bound to it. Multiple components can bind to the service at once, but when all of them unbind, the service is destroyed.

Use Low Power Mode to save battery life on your iPhone or iPad

Low Power Mode reduces the amount of power that your iPhone or iPad uses when the battery gets low.

To turn Low Power Mode on or off, go to Settings > Battery. You can also turn Low Power Mode on and off from Control Center. Go to Settings > Control Center > Customize Controls, then select Low Power Mode to add it to Control Center.

When Low Power Mode is on, your iPhone or iPad will last longer before you need to charge it, but some features might take longer to update or complete. Also, some tasks might not work until you turn off Low Power Mode, or until you charge your iPhone or iPad to 80% or higher.

Low Power Mode reduces or affects these features:

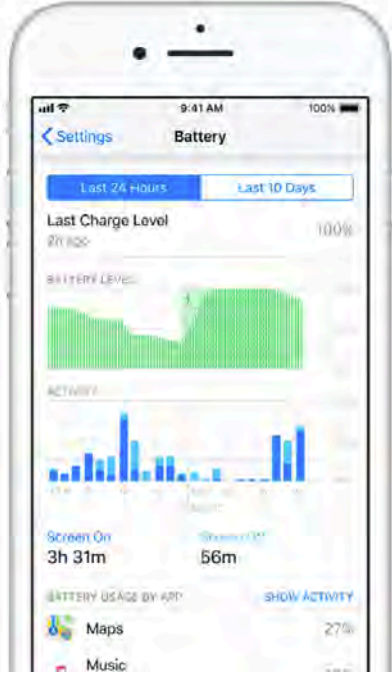

- 5G (except for video streaming) on iPhone 12 and iPhone 13 models¹
- Auto-Lock (defaults to 30 seconds)
- Display brightness
- Display refresh rate (limited up to 60 Hz) on iPhone and iPad models with ProMotion display²
- Some visual effects
- iCloud Photos (temporarily paused)
- Automatic downloads
- Email fetch
- Background app refresh

When Low Power Mode is on, the battery in the status bar will be yellow. You'll see a yellow battery icon  and the battery percentage. After you charge your iPhone or iPad to 80% or higher, Low Power Mode automatically turns off.

1. If you turn on Low Power Mode, 5G is disabled, except in some cases like video streaming and large downloads on iPhone 12 and iPhone 13 models. With iPhone 12 models, Low Power Mode disables 5G standalone (where available).

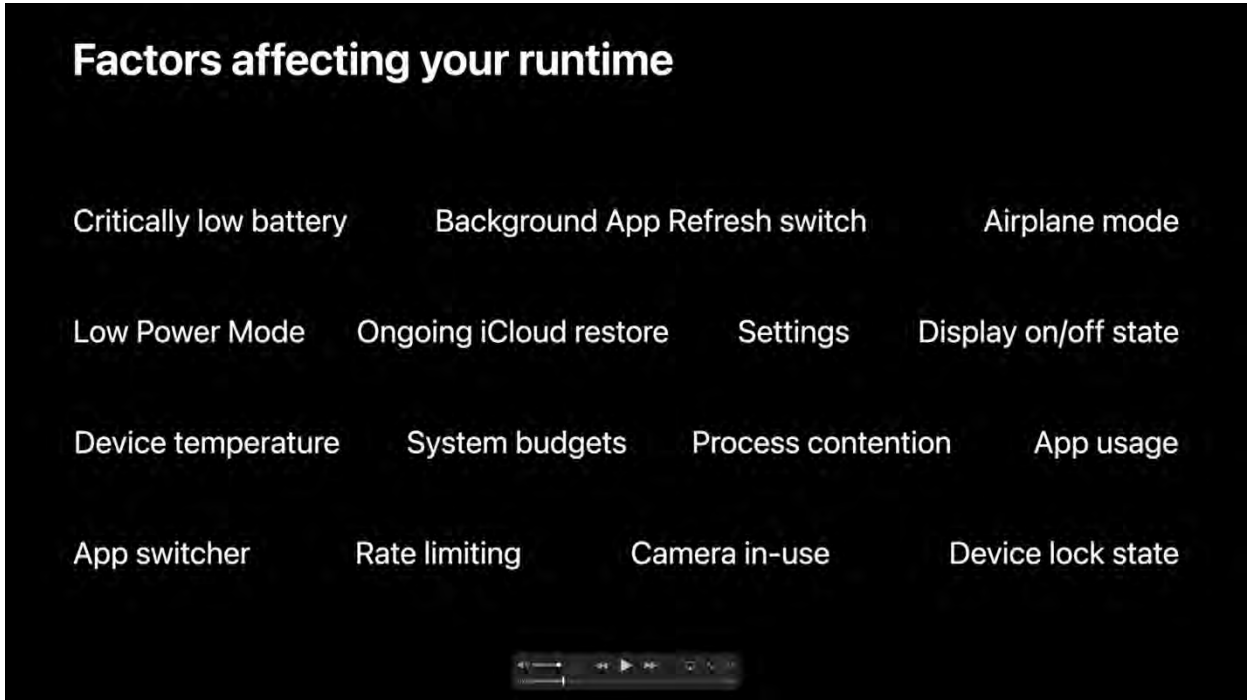

2. These devices have ProMotion display: iPhone 13 Pro and later, iPhone 13 Pro Max and later, iPad Pro 10.5-inch, all iPad Pro 11-inch models, and iPad Pro 12.9-inch (2nd generation) and later.

On Android 7.0 (API level 24) and higher, users can enable Data Saver on a device-wide basis in order to optimize their device's data usage, and use less data. This ability is especially useful when roaming, near the end of the billing cycle, or for a small prepaid data pack.</p> <p>When a user enables Data Saver in Settings and the device is on a metered network, the system blocks background data usage and signals apps to use less data in the foreground wherever possible. Users can allow specific apps to use background metered data usage even when Data Saver is turned on.</p> <p>Android 7.0 (API level 24) extends the ConnectivityManager API to provide apps with a way to retrieve the user's Data Saver preferences and monitor preference changes. It is considered good practice for apps to check whether the user has enabled Data Saver and make an effort to limit foreground and background data usage.</p> </div>

Claim	Public Documentation
	<div data-bbox="594 245 1577 797"> <p>Check data saver preferences</p> <p>On Android 7.0 (API level 24) and higher, apps can use the <code>ConnectivityManager</code> API to determine what data usage restrictions are being applied. The <code>getRestrictBackgroundStatus()</code> method returns one of the following values:</p> <p><code>RESTRICT_BACKGROUND_STATUS_DISABLED</code></p> <p>Data Saver is disabled.</p> <p><code>RESTRICT_BACKGROUND_STATUS_ENABLED</code></p> <p>The user has enabled Data Saver for this app. Apps should make an effort to limit data usage in the foreground and gracefully handle restrictions to background data usage.</p> <p><code>RESTRICT_BACKGROUND_STATUS_WHITELISTED</code></p> <p>The user has enabled Data Saver but the app is allowed to bypass it. Apps should still make an effort to limit foreground and background data usage.</p> <p>Limit data usage whenever the device is connected to a metered network, even if Data Saver is disabled or the app is allowed to bypass it. The following sample code uses <code>ConnectivityManager.isActiveNetworkMetered()</code> and <code>ConnectivityManager.getRestrictBackgroundStatus()</code> to determine how much data the app should use:</p> </div> <p data-bbox="594 854 1593 886">; https://developer.android.com/training/monitoring-device-state/doze-standby:</p> <div data-bbox="594 894 1829 1390"> <h2 data-bbox="604 922 1535 980">Optimize for Doze and App Standby </h2> <p data-bbox="604 1029 1808 1154">Starting from Android 6.0 (API level 23), Android introduces two power-saving features that extend battery life for users by managing how apps behave when a device is not connected to a power source. <i>Doze</i> reduces battery consumption by deferring background CPU and network activity for apps when the device is unused for long periods of time. <i>App Standby</i> defers background network activity for apps with which the user has not recently interacted.</p> <p data-bbox="604 1187 1782 1247">While the device is in Doze, apps' access to certain battery-intensive resources is deferred until maintenance windows. The specific restrictions are listed in Power Management Restrictions.</p> <p data-bbox="604 1279 1766 1370">Doze and App Standby manage the behavior of all apps running on Android 6.0 or higher, regardless whether they are specifically targeting API level 23. To ensure the best experience for users, test your app in Doze and App Standby modes and make any necessary adjustments to your code. The sections below provide details.</p> </div>

Claim	Public Documentation
	<div data-bbox="594 245 1545 870"> <h3>Understanding Doze</h3> <p>If a user leaves a device unplugged and stationary for a period of time, with the screen off, the device enters Doze mode. In Doze mode, the system attempts to conserve battery by restricting apps' access to network and CPU-intensive services. It also prevents apps from accessing the network and defers their jobs, syncs, and standard alarms.</p> <p>Periodically, the system exits Doze for a brief time to let apps complete their deferred activities. During this <i>maintenance window</i>, the system runs all pending syncs, jobs, and alarms, and lets apps access the network.</p>  <p>Figure 1. Doze provides a recurring maintenance window for apps to use the network and handle pending activities.</p> </div> <div data-bbox="594 894 1646 1065"> <p>At the conclusion of each maintenance window, the system again enters Doze, suspending network access and deferring jobs, syncs, and alarms. Over time, the system schedules maintenance windows less and less frequently, helping to reduce battery consumption in cases of longer-term inactivity when the device is not connected to a charger.</p> <p>As soon as the user wakes the device by moving it, turning on the screen, or connecting a charger, the system exits Doze and all apps return to normal activity.</p> </div> <div data-bbox="594 1089 1829 1219"> <p>The Doze restriction on network access is also likely to affect your app, especially if the app relies on real-time messages such as tickles or notifications. If your app requires a persistent connection to the network to receive messages, you should use Firebase Cloud Messaging (FCM) if possible.</p> </div> <p>; https://developer.android.com/topic/performance/appstandby:</p>

App Standby Buckets

Android 9 (API level 28) and higher support **App Standby Buckets**. App Standby Buckets help the system prioritize apps' requests for resources based on how recently and how frequently the apps are used. Based on app usage patterns, each app is placed in one of five priority **buckets**. The system limits the device resources available to each app based on which bucket the app is in.

Priority buckets

The system dynamically assigns each app to a priority bucket, reassigning the apps as needed. The system may rely on a preloaded app that uses machine learning to determine how likely each app is to be used, and assigns apps to the appropriate buckets. If the system app is not present on a device, the system defaults to sorting apps based on how recently they were used. More active apps are assigned to buckets that give the apps higher priority, making more system resources available to the app. In particular, the bucket determines how frequently the app's jobs run, and how often the app can trigger alarms. These restrictions apply only while the device is on battery power; the system does not impose these restrictions on apps while the device is charging.

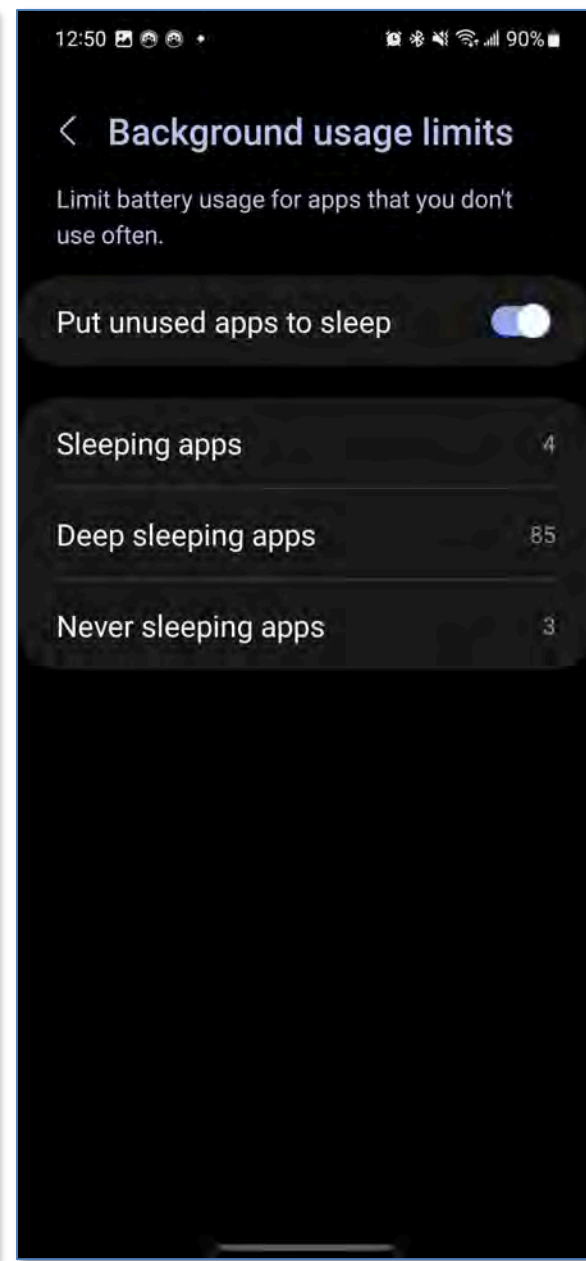

★ **Note:** Every manufacturer can set their own criteria for how non-active apps are assigned to buckets. You should not try to influence which bucket your app is assigned to. Instead, focus on making sure your app behaves well in whatever bucket it might be in. Your app can find out what bucket it's currently in by calling `UsageStatsManager.getAppStandbyBucket()`.

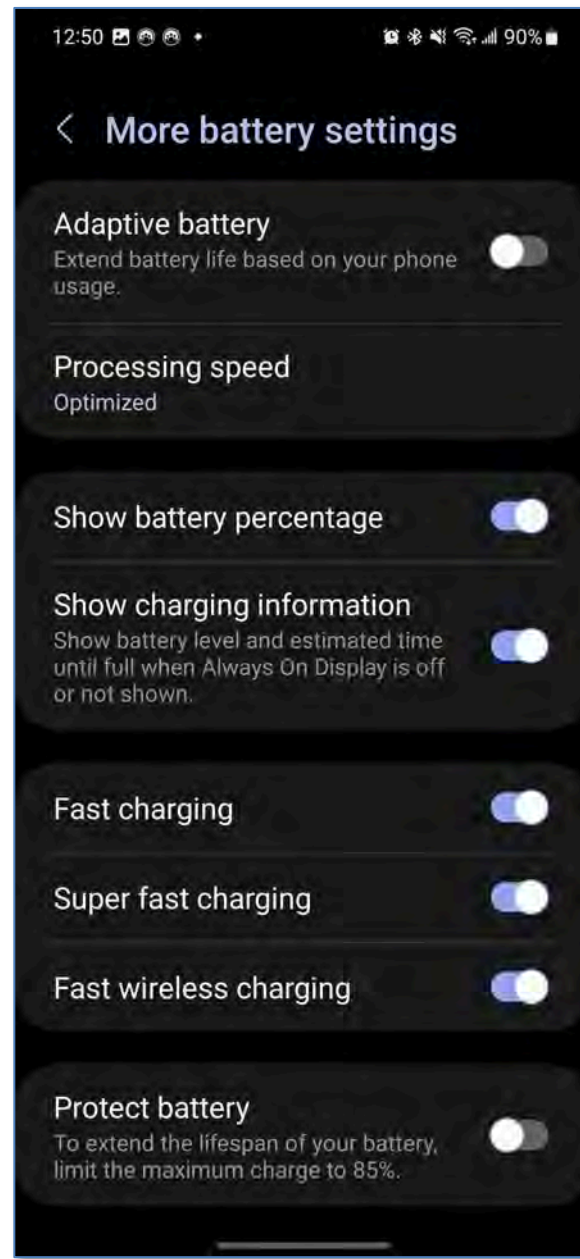

The buckets are:

1. **Active:** App is currently being used or was very recently used.
2. **Working set:** App is in regular use.
3. **Frequent:** App is often used, but not every day.
4. **Rare:** App is not frequently used.
5. **Restricted:** App consumes a great deal of system resources, or may exhibit undesirable behavior.

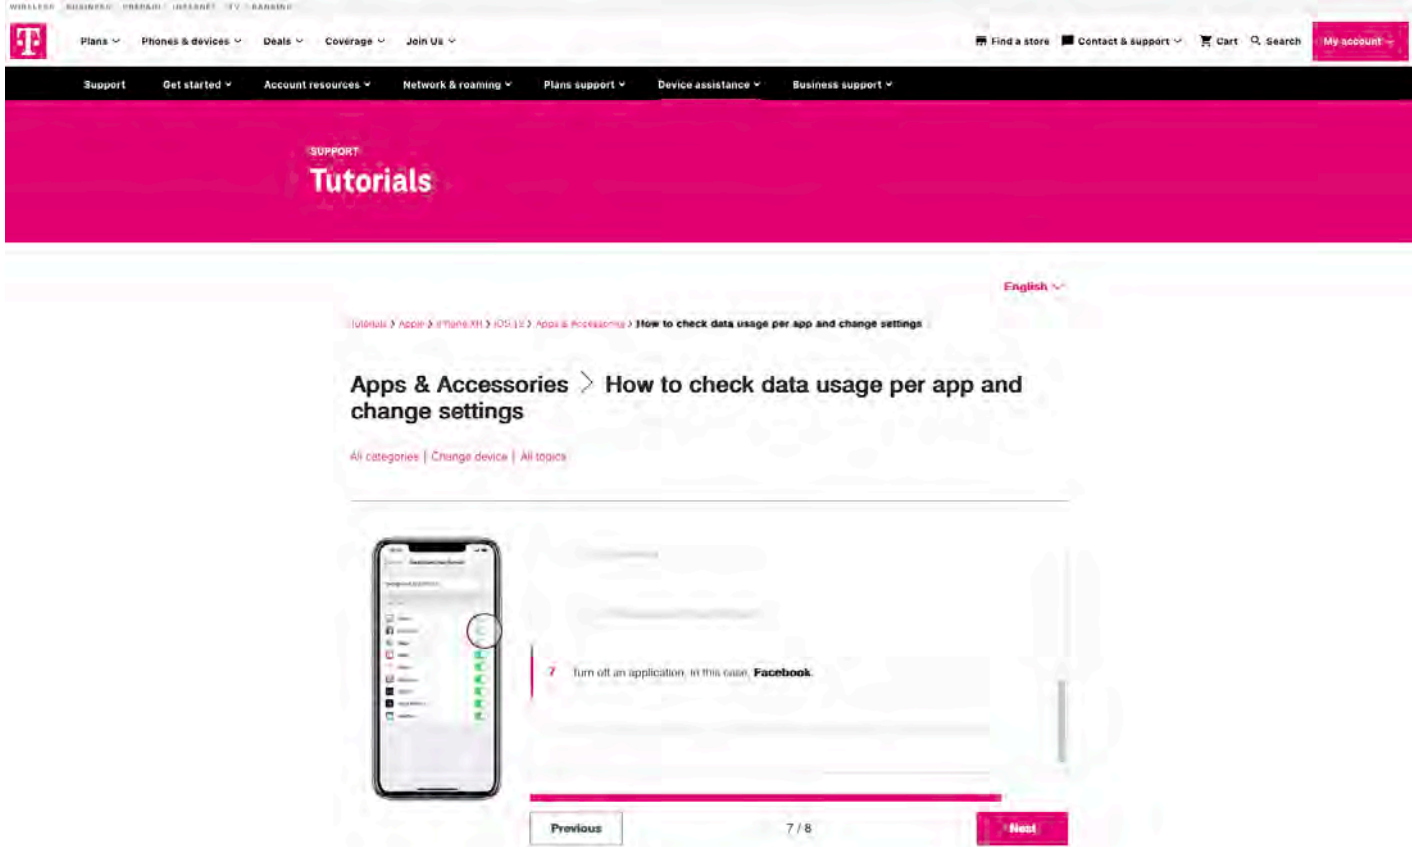

In addition, there's a special **never** bucket for apps that have been installed but have never been run. The system imposes severe restrictions on these apps.

Use Low Power Mode to save battery life on your iPhone or iPad

Low Power Mode reduces the amount of power that your iPhone or iPad uses when the battery gets low.

To turn Low Power Mode on or off, go to Settings > Battery. You can also turn Low Power Mode on and off from Control Center. Go to Settings > Control Center > Customize Controls, then select Low Power Mode to add it to Control Center.

When Low Power Mode is on, your iPhone or iPad will last longer before you need to charge it, but some features might take longer to update or complete. Also, some tasks might not work until you turn off Low Power Mode, or until you charge your iPhone or iPad to 80% or higher.

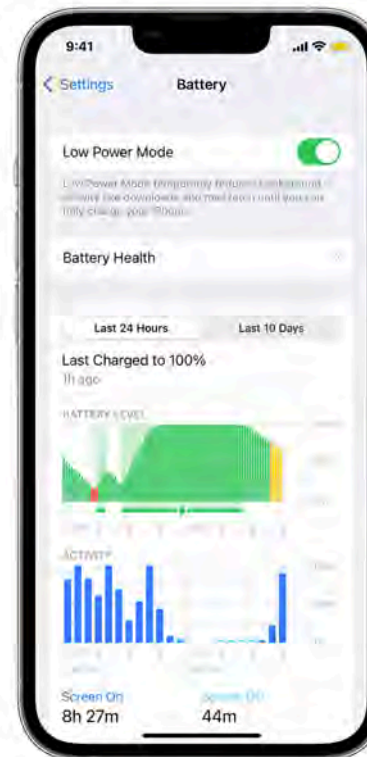

Low Power Mode reduces or affects these features:

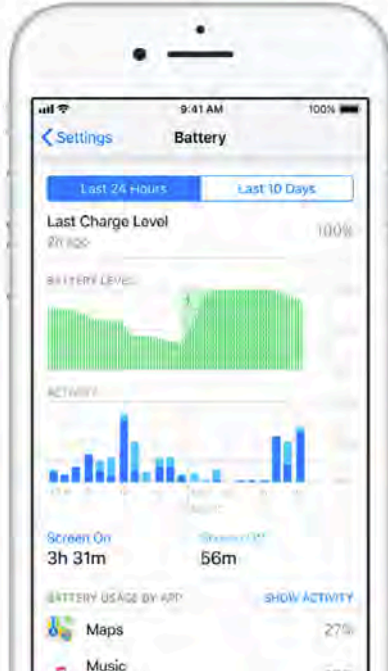

- 5G (except for video streaming) on iPhone 12 and iPhone 13 models¹
- Auto-Lock (defaults to 30 seconds)
- Display brightness
- Display refresh rate (limited up to 60 Hz) on iPhone and iPad models with ProMotion display²
- Some visual effects
- iCloud Photos (temporarily paused)
- Automatic downloads
- Email fetch
- Background app refresh

When Low Power Mode is on, the battery in the status bar will be yellow. You'll see a yellow battery icon  and the battery percentage. After you charge your iPhone or iPad to 80% or higher, Low Power Mode automatically turns off.

1. If you turn on Low Power Mode, 5G is disabled, except in some cases like video streaming and large downloads on iPhone 12 and iPhone 13 models. With iPhone 12 models, Low Power Mode disables 5G standalone (where available).

2. These devices have ProMotion display: iPhone 13 Pro and later, iPhone 13 Pro Max and later, iPad Pro 10.5-inch, all iPad Pro 11-inch models, and iPad Pro 12.9-inch (2nd generation) and later.

To minimize the battery drain associated with network activity, it's critical that you understand how your connectivity model will affect the underlying radio hardware.</p><p data-bbox="615 496 1806 594">This section introduces the wireless radio state machine and explains how your app's connectivity model interacts with it. It then offers several techniques which, when followed, will help minimize the effect of your app's data consumption on the battery.</p></div>

The radio state machine

The wireless radio on your user's device has built-in power-saving features that help minimize the amount of battery power it consumes. When fully active, the wireless radio consumes significant power, but when inactive or in standby, the radio consumes very little power.

One important factor to remember is that the radio cannot move from standby to fully active instantaneously. There is a latency period associated with "powering up" the radio. So the battery transitions from higher energy states to lower energy states slowly in order to conserve power when not in use while attempting to minimize the latency associated with "powering up" the radio.

The state machine for a typical 3G network radio consists of three energy states:

- **Full power:** Used when a connection is active, allowing the device to transfer data at its highest possible rate.
- **Low power:** An intermediate state that cuts battery power consumption by around 50%.
- **Standby:** The minimal power-consuming state during which no network connection is active.

While the low and standby states drain significantly less battery, they also introduce significant latency to network requests. Returning to full power from the low state takes around 1.5 seconds, and moving from standby to full power can take over 2 seconds.

To minimize latency, the state machine uses a delay to postpone the transition to lower energy states. Figure 1 uses AT&T's timings for a typical 3G radio.

Figure 1. Typical 3G wireless radio state machine.

The radio state machine on each device, particularly the associated transition delay ("tail time") and startup latency, will vary based on the wireless radio technology employed (3G, LTE, 5G, and so on) and is defined and configured by the carrier network over which the device is operating.

This page describes a representative state machine for a typical 3G wireless radio, based on data provided by AT&T. However, the general principles and resulting best practices are applicable for all wireless radio implementations.

This approach is particularly effective for typical mobile web browsing as it prevents unwelcome latency while users browse the web. The relatively low tail-time also ensures that once a browsing session has finished, the radio can move to a lower energy state.

Unfortunately, this approach can lead to inefficient apps on modern smartphone operating systems like Android, where apps run both in the foreground (where latency is important) and in the background (where battery life should be prioritized).

How apps impact the radio state machine

Every time you create a new network connection, the radio transitions to the full power state. In the case of the typical 3G radio state machine described earlier, it will remain at full power for the duration of your transfer—plus an additional 5 seconds of tail time—followed by 12 seconds at the low energy state. So for a typical 3G device, every data transfer session will cause the radio to draw energy for at least 18 seconds.

In practice, this means that an app which makes a one second data transfer, three times a minute, will keep the wireless radio perpetually active, moving it back to high power just as it is entering standby mode.

Figure 2. Relative wireless radio power use for one-second transfer running three times every minute. Figure excludes “power up” latency between runs.

By comparison, if the same app bundled its data transfers, running a single three-second transfer every minute, this would keep the radio in the high-power state for a total of only 20 seconds each minute. This would allow the radio to be on standby for 40 seconds of every minute, resulting in a significant reduction in battery consumption.

Figure 3. Relative wireless radio power use for three second transfers running once every minute.

Optimization techniques

Now that you understand how network access affects battery life, let's talk about a few things that you can do to help reduce battery drain, while also providing a fast and fluid user experience.

Bundle data transfers

As stated in the previous section, bundling your data transfers so that you're transferring more data less often is one of the best ways to improve battery efficiency.

Of course, this is not always possible to do if your app needs to receive or send data immediately in response to a user action. You can mitigate this by anticipating and [prefetching data](#). Other scenarios, such as sending logs or analytics to a server and other, non-urgent, app-initiated data transfers, lend themselves very well to batching and bundling. See [Optimizing app-initiated tasks](#) for tips on scheduling background network transfers.

Prefetch data

Prefetching data is another effective way to reduce the number of independent data transfer sessions that your app runs. With prefetching, when the user performs an action in your app, the app anticipates which data will most likely be needed for the next series of user actions and fetches that data in a single burst, over a single connection, at full capacity.

By front-loading your transfers, you reduce the number of radio activations required to download the data. As a result, you not only conserve battery life, but also improve the latency, lower the required bandwidth, and reduce download times.

Prefetching also provides an improved user experience by minimizing in-app latency caused by waiting for downloads to complete before performing an action or viewing data.

	<div data-bbox="594 245 1829 802" style="border: 1px solid black; padding: 10px;"> <p>Check for connectivity before making requests</p> <p>Searching for a cell signal is one of the most power-draining operations on a mobile device. A best practice for user-initiated requests is to first check for a connection using <code>ConnectivityManager</code>, as shown in Monitor connectivity status and connection metering. If there's no network, the app can save battery by not forcing the mobile radio to search. The request can then be scheduled and performed in a batch with other requests when a connection is made.</p> <p>Pool connections</p> <p>An additional strategy that can help in addition to batching and prefetching, is to pool your app's network connections. It's generally more efficient to reuse existing network connections than it is to initiate new ones. Reusing connections also allows the network to more-intelligently react to congestion and related network data issues.</p> <p><code>HttpURLConnection</code> and most HTTP clients, such as OkHttp, enable connection-pooling by default, and reusing the same connection for multiple requests.</p> </div>
